Actuarial Cost Methods

Traditional Unit Credit Cost Method - The actuarial cost method used to calculate the minimum required contribution is the traditional unit credit cost method. The normal cost is the sum of all the individual normal costs for each participant. The individual normal cost is the present value of the benefit expected to be earned during the year being valued. For non-active participants, the normal cost is zero. The actuarial accrued liability is the sum of the individual accrued liabilities for all participants. The individual accrued liability is the present value of the accrued benefit as of the valuation date. The unfunded liability is equal to the actuarial accrued liability less the valuation assets, and is referred to as the “shortfall”.

Projected Unit Credit Cost Method - The projected unit credit cost method is used for computing pension liabilities used in FASB ASC 715 pension accounting and in the calculation of the maximum deductible contribution. Under this method, the normal cost is the sum of the individual normal costs for all participants. The individual normal cost is the present value of the benefit expected to be earned during the year being valued, assuming the benefit as of the beginning of the year and as of the end of the year are calculated with final average salary. For a non-active participant, the normal cost is zero. The actuarial accrued liability is the sum of the individual accrued liabilities for all plan participants. The individual accrued liability is the present value of the accrued benefit based on service as of the valuation date, calculated using final average salary. For non-active participants, the individual accrued liability is the present value of their benefit. The unfunded liability is equal to the actuarial accrued liability less the valuation assets.

Actuarial Assumptions

A summary of the actuarial assumptions used in the valuation is presented below:

Valuation Assets – Market Value.

Mandated Discount Rates

	Current Year
Segment 1 – Payments within 5 years	4.75%
Segment 2 – Payments between 5 and 20 years	5.00%
Segment 3 – Payments after 20 years	5.74%
Effective Rate	4.75%

Pre-retirement Mortality – None

Post-retirement Mortality – 2023 Applicable Mortality Table

Probability of payment form:

Annuity	0%
Lump Sum	100%

Rationale - The lump sum is the normal form of payment.
