2023 Schedule SB, Part V - Statement of Actuarial Assumptions/Methods

A. Actuarial Assumptions for Funding Purposes

The actuarial assumptions and methods used to determine the costs and liabilities at the valuation date are described below.

Valuation Date January 1, 2023

Valuation Interest Rates Valuation interest rate is based on the 24-month average segment rates for January 2023 pursuant to IRC Section 430(h)(2), taking into account the corridor around the 25-year average segment rates, reflecting applicable minimum rates, in accordance with MAP-21, HATFA, ARPA and IIJA.

	January 2023 Segment Rates	Reflecting Corridor
1 st Segment Rate	2.13%	4.75%
2 nd Segment Rate	3.62%	5.00%
3 rd Segment Rate	3.93%	5.74%
Effective Interest Rate		5.34%

Cash Balance Interest Crediting Rate 4.00% per annum

Mortality 2023 Static Separate Annuitant and Nonannuitant Mortality Table pursuant to Internal Revenue Code section 1.430(h)(3)-1, post commencement only

Withdrawal None

Disability None

Retirement Rates vary by age:

<u>Attained Age</u>	<u>Rate</u>

67-69	5%

New Entrants No new entrants are assumed to enter the Plan after the valuation date.

IRS Section 415(b) Limit For 2023, the maximum benefit limitation is \$265,000

Pre-Retirement Death Benefit	Because the assumed form of payment is a lump sum payable at Normal Retirement and there is no forfeiture upon death, the value of the Pre-Retirement Death Benefit was implicitly determined by not reflecting pre-retirement mortality.
Expenses	\$110,000 per year

B. Actuarial Methods for Funding Purposes

Actuarial Cost Method	<p>The actuarial cost method is the Unit Credit Actuarial Cost Method.</p> <p>Under this cost method, the target liability is defined as the present value of the accrued benefits on the valuation date. The funding shortfall is the excess, if any, of the amount by which the target liability exceeds the actuarial value of Plan Assets.</p> <p>The target normal cost, determined on the valuation date, is the amount required to fund the benefit expected to be earned in the current year plus expected expenses.</p>
Asset Valuation Method	Market Value of Assets

C. Actuarial Assumptions Rationale

Valuation Interest Rates	The interest rate assumption used is prescribed by IRC section 430(h) subject to specified elections by the plan sponsor.
Cash Balance Interest Crediting Rate	The interest rate of 4.00% is intended to represent the net yield on Deemed Account Balances over an extended period of time in the future, reflecting the investment policy established by the plan sponsor. Note that the interest rate credited to participants' balances is the yield on plan assets (after expenses) minus 0.25% per annum.
Mortality	The mortality assumption used is prescribed by IRC section 430(h) subject to specified elections by the plan sponsor.
Withdrawal	No withdrawal is assumed. This assumption is not expected to generate material actuarial gains or losses.
Retirement	Retirement rates are based on the plan sponsor's expectations for the future with periodic monitoring of observed gains and losses caused by retirement patterns different than assumed.
Disability	No disability is assumed. This assumption is not expected to generate material actuarial gains or losses as there is no forfeiture upon disability and no additional disability benefit is provided under the Plan.
Salary	The salary assumption is not applicable due to the nature of the benefits provided in the Plan.
Form of Payment	100% of participants are assumed to elect a lump sum. This assumption was based on best expectations given plan provisions. Alternative forms of payment are not expected to generate material gains or losses.
Expenses	This assumption is based on the plan sponsor's expectations for annual expenses paid from the trust.

B. Actuarial Methods for Funding Purposes

Actuarial Cost Method	<p>The actuarial cost method is the Unit Credit Actuarial Cost Method.</p> <p>Under this cost method, the target liability is defined as the present value of the accrued benefits on the valuation date. The funding shortfall is the excess, if any, of the amount by which the target liability exceeds the actuarial value of Plan Assets.</p> <p>The target normal cost, determined on the valuation date, is the amount required to fund the benefit expected to be earned in the current year plus expected expenses.</p>
Asset Valuation Method	Market Value of Assets

C. Actuarial Assumptions Rationale

Valuation Interest Rates	The interest rate assumption used is prescribed by IRC section 430(h) subject to specified elections by the plan sponsor.
Cash Balance Interest Crediting Rate	The interest rate of 4.00% is intended to represent the net yield on Deemed Account Balances over an extended period of time in the future, reflecting the investment policy established by the plan sponsor. Note that the interest rate credited to participants' balances is the yield on plan assets (after expenses) minus 0.25% per annum.
Mortality	The mortality assumption used is prescribed by IRC section 430(h) subject to specified elections by the plan sponsor.
Withdrawal	No withdrawal is assumed. This assumption is not expected to generate material actuarial gains or losses.
