Schedule SB, Part V – Statement of Actuarial Assumptions and Methods

Actuarial Cost Method

Traditional Unit Credit Cost Method. The actuarial cost method is required by the Pension Protection Act of 2006. For FASB ASC 960 purposes, the cost method is prescribed by FASB.

For determining the Target Liability, the present value of the benefits accumulated as of the valuation date is calculated by projecting future benefit payments of the accrued benefit, adjusted for the probability of payment according to the demographic assumptions, and discounting the payments to the valuation date using the segment interest rates. Payments made within five years of the valuation date are discounted using the first segment rate, payments made at least five but less than 20 years after the valuation date are discounted using the second segment rate, and payments made at least 20 years after the valuation date are discounted using the third segment rate. The Target Normal Cost is calculated in an identical manner, substituting the future benefit payments anticipated based on service earned during the current plan year (if any).

Asset Method

For Valuation

The three-year smoothing method described in Internal Revenue Code section 430(g)(3)(B), using annual determination dates ending on the valuation date, with an assumed investment return of 4.0% (not to exceed the third segment rate under Code section 430 (h)(2)(c)(iii) as specified by IRS Notice 2009-22). The actuarial value of assets must be within a 10% corridor of the market value of assets including discounted receivables.

For FASB ASC 960 Market Value.

The asset valuation method for valuation purposes is prescribed by the Pension Protection Act of 2006 based on elections made by the Plan Sponsor. For FASB ASC 960 purposes, the asset valuation method is prescribed by FASB.

Valuation Date

January 1.

Schedule SB, Part V – Statement of Actuarial Assumptions and Methods

Third Segment	3.36%	5.92%	3.58%	5.74%
Effective Interest Rate	2.80%	5.34%	3.13%	5.16%

Segment rates published by the PBGC for the premium payment year beginning January 1, 2023 are 4.84% for the first segment, 5.15% for the second segment, and 4.85% for the third segment. Under the Alternative Method election, the segment rates without reflecting Stabilization shown in the table above are used to determine the Variable-Rate Premium.

For all other Valuation Calculations
