New York Racing Association, Inc. Pension Plan for Assistant Starters
EIN 61-1559040, PN 008
2023 Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Summary of Actuarial Methods

The ultimate cost of a pension plan is the excess of actual benefits and administrative expenses paid over actual net investment return on plan assets during the plan's existence until the last payment has been made to the last participant. A plan's "actuarial cost method" determines the expected incidence of actuarial costs by allocating portions of the ultimate cost to each plan year. The cost method is thus a budgeting tool to help ensure that a plan will be adequately and systematically funded and accounted for. Annual contributions and accounting expense are also affected by a plan's "asset valuation method" (as well as plan provisions, actuarial assumptions, and actual plan demographic and investment experience each year).

Actuarial Cost Method

The actuarial cost method used for determining the Plan's ERISA funding requirements is the Unit Credit method. Under this method, an accrued benefit is determined at each active participant's assumed retirement age based on compensation and service at both the beginning and the end of the current year. The Plan's normal cost is the sum of the present value of the excess of each active participant's accrued benefit at the end of the current year over that at the beginning of the current year. The Plan's accrued liability is the sum of (a) the present value of each active participant's accrued benefit at the beginning of the current year plus (b) the present value of each inactive participant's benefits.

Asset Valuation Method

The Actuarial Value of Assets used for determining the Plan's ERISA funding requirements is based on the permitted three-year asset smoothing as defined under IRS Notice 2009-22. Under this method, the Actuarial Value of Assets equals the Adjusted Market Value of Assets minus one-third and two-thirds, respectively, of the investment gain or loss for each of the two immediately preceding plan years, but it must be within 90% to 110% of the Adjusted Market Value of Assets. The expected investment return for a plan year is based on the lesser of the expected rate of return on plan assets or the applicable statutory interest rate for the year.

Summary of Actuarial Assumptions

Economic Assumptions

The current funding interest rates are as follows. The funding interest rates are prescribed under IRS regulations based on the Plan Sponsor's interest rate election.

Minimum Funding	
Segment 1 (0–5 years)	4.75%
Segment 2 (5–20 years)	5.00%
Segment 3 (20+ years)	5.74%
Effective Interest Rate	5.39%

ERISA minimum funding rates: January 1, 2023 Segment Rate Stabilization Rates with a 4-month lookback.

Expected Return on Assets: 6.00%, compounded annually. This assumption is based on the Plan's target asset allocation, assumed investment expenses, and reflects inflation as described below. This assumption represents an estimate of future experience and is based on both historical returns and projections.

New York Racing Association, Inc. Pension Plan for Assistant Starters
EIN 61-1559040, PN 008
2023 Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Consumer Price Index: 2.40%, compounded annually. This assumption represents an estimate of future experience and is based in part on observations of estimates inherent in market data.

Compensation Increases: 4.00%, compounded annually with increases assumed to occur at beginning of year. This assumption represents an estimate of future experience.
