1. Information inputs including the data, assumptions, methods, and plan provisions outlined in this report,
2. Processing by ProVal[®] actuarial software, and
3. Our report template which translates the ProVal[®] output into valuation results.

The model is intended to convert the information input above to usable actuarial valuation results. We have reviewed the software's output for reasonableness, and have independently checked sample one-person output where appropriate, but have otherwise relied on it.

4) Changes in assumptions and methods since last year

- The funding interest segment rates and mortality table were changed as required by law.
