Schedule SB, Part V – Schedule of Actuarial Assumptions/Methods

Actuarial Cost Method

The actuarial cost method used to calculate the costs and liabilities of the plan is the Unit Credit Actuarial Cost Method as required by PPA. Under this method, the normal cost and actuarial accrued liability are both based on an accrual of projected benefits over the period for which benefits accrue under the terms of the plan. The target normal cost is the actuarial present value of one year's benefit accrual on this basis. The target liability is the actuarial present value of the benefit earned based on service and salary history as of the valuation date. Insured death benefits have not been included in liabilities and the value of life insurance policies are not included as plan assets.

For purposes of accounting disclosure, the Projected Unit Credit funding method was used to determine the projected benefit obligation.

All employees who are plan participants on a valuation date are included in the actuarial valuation.

Asset Valuation Method

The actuarial value of assets is equal to the market value of assets.

Interest Rates

PPA liability rates (HATFA)

1st segment rate 4.75%

2nd segment rate 4.96%

3rd segment rate 5.59%

PPA rates used are the applicable 24-month average rates for November 2023, subject to HATFA corridor restrictions

Effective interest rate 5.00%

Compensation Increase (where applicable)

3% per year

Retirement Age

Participants are assumed to retire at age 65 or after 1 year.

Pre- and Post-retirement Mortality

Pre-Retirement: None assumed.

Post Retirement: The sex-distinct IRS 2024 Combined Static Mortality Table. However, it is assumed that all benefits will be paid in a lump sum, which is based on the assumptions for Actuarial Equivalence in the plan, with an assumed interest rate of 1%.

Withdrawal and Disability

None assumed.

Plan Expenses

None assumed.
