Statement by Enrolled Actuary

To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

Valuation Date December 31, 2024

Actuarial Cost Method

Funding Target Liability

The Funding Target Liability is determined using the Unit Credit Actuarial Cost Method. Under this method, an accrued benefit is determined for each individual based upon service and compensation / benefit components as of the beginning of the plan year; a present value of this amount is then determined based upon each individual's anticipated future date(s) of decrement (allowing for anticipated future eligibility for benefits).

Target Normal Cost

Target Normal Cost is determined as the increase in a participant's accrued benefit (inherent in the determination of the Target Liability) for an additional year of service earned during the plan year. Target Normal Cost also includes the assumed value of any administrative expenses payable from the plan trust for the plan year.

Actuarial Value of Assets Method

Fair value of assets, including the discounted value of any receivable contributions and excluding the accumulated value of any advance contributions.

Excess Assets

The excess of the Plan's Actuarial Value of Assets (reduced for any Carryover Balance / Prefunding Balance) over the Plan's Funding Target Liability, if any.

Funding Shortfall

The excess of the Plan's Funding Target Liability over the Plan's Actuarial Value of Assets (reduced for any Carryover Balance / Prefunding Balance), if any.

Amortization of Funding Shortfall

The Plan's Funding Shortfall is amortized using a 15-year closed amortization method.

Under this method, the Plan's Funding Shortfall is determined each year and a new shortfall amortization charge is established (if applicable). The new shortfall amortization charge is determined as the amortization of the difference in the Funding Shortfall and the present value of all remaining shortfall amortizations. Once established, a shortfall amortization is maintained and amortized over a 15-year period (unless and until the Plan no longer has a Funding Shortfall).

A new shortfall amortization charge is not established for a plan year if the Funding Shortfall (determined without reduction for any Carryover Balance) is less than zero.

Minimum Required Contribution	<p>Equal to the Target Normal Cost plus any Shortfall Amortization Charges, less the value of any Excess Assets.</p> <p>Certain assumptions used for the purposes of determining the Minimum Required Contribution are prescribed by law and subject to sponsor elections.</p>
Maximum Deductible Contribution	<p>Equal to the Funding Target Liability, plus Target Normal Cost, plus a Cushion Amount (50% of the Funding Target Liability*), plus an adjustment to the Funding Target Liability* for assumed salary increases (if applicable), less the value of the Actuarial Value of Assets.</p> <p>Certain assumptions used for the purposes of determining the Maximum Deductible Contribution are prescribed by law and subject to sponsor elections.</p>
Determination of Vested Funding Target Liability	<p>Determined under the same methodology as the Funding Target Liability but based upon the vested amount of a participant's accrued benefit considering the participant's age and service as of the valuation date. At each future decrement age, only benefits for which a participant is fully or partially vested as of the valuation date are valued.</p> <p>For these purposes, pre-retirement death benefits are considered vested based upon a participant's age and service as of the valuation date.</p>
Roll-Forward Methodology	<p>The current methodology is to prepare a robust valuation every year, based on census information as of the Valuation Date. There is no roll-forward methodology used.</p>
Inclusion Date	<p>Employees are included in the valuation upon attaining eligibility to participate in the Plan; no future or re-hired employees or participants are anticipated as of the valuation date, and former non-vested participants are excluded from the valuation as provided under Treasury Regulation §1.430(d)-1(e)(2).</p>
Compensation	<p>Current year plan compensation is provided by Partners In Design Architects, Inc. and is used directly to prepare the Funding Target Liability and Target Normal Cost as of the valuation date.</p>

* For these purposes, the value of benefit increases for highly compensated employees (within the last two years) are excluded.

**American Rescue Plan Act
(ARPA) of 2021**

The results have been prepared reflecting the provisions of the American Rescue Plan Act (ARPA) of 2021. This includes the changes to the provisions of IRC Section 430(h)(2)(C)(iv) regarding the stabilized interest rates required to be used for the actuarial valuation.

This also includes the provisions of IRC §430(c)(8) regarding the reset of all prior shortfall amortizations and the extension of the amortization period to 15 years for all subsequent shortfall amortizations.

The results have been prepared based upon our understanding of the provisions of ARPA, and represent a good faith effort to adhere to the provisions of the law. Future guidance provided by the Internal Revenue Service may conflict with this understanding; ultimate results will conform to all guidance provided regarding the act.

**Prescribed Assumptions /
Methods**

The following assumptions and methods were established by law and prescribed by the Internal Revenue Service (IRS) in conjunction with elections made by the plan sponsor.

Interest Rates

Separate interest rate assumptions are used for the determination of Funding Target Liability for Minimum Required Contribution and Maximum Deductible Contribution determinations. Inherent in each of these measurements is a desire for stability in the determination of the contribution amounts and a mandate to reflect current and historic market conditions for settling these types of obligations (with more focus on stability in the measurement for the Minimum Required Contribution and more focus on market conditions in the measurement for the Maximum Deductible Contribution). Given analysis of the underlying interest rates is outside the scope of this project, we are unable to evaluate the reasonableness of this prescribed assumption for the purposes of these measurements.

*Post-Retirement
Mortality*

The prescribed mortality assumption incorporates future mortality improvements and is based upon experience analyses from recent studies. Given analysis of the underlying mortality of this population is outside the scope of this project, we are unable to evaluate the reasonableness of this prescribed assumption for the purposes of these measurements.

*Actuarial Cost /
Asset Valuation
Methods*

These methods reflect accrued benefits earned over a participant's years of service, as well as potentially smoothed asset valuations over a 3-year time horizon. We do not believe these methods significantly conflict with any reasonable method which may be selected for the purposes of these measurements.

*Annuity Substitution
Method*

This method requires that any annuity that is assumed to be paid in a lump sum optional payment form and which is subject to the minimum present value conversion rules of Internal Revenue Code Section 417(e) must be valued as an annuity using the underlying interest rate assumptions and applicable mortality based on the current valuation year. Given the more immediate nature of lump sum determinations and the disconnect between current mortality and a smoothed interest rate basis, we are unable to evaluate the reasonableness of this prescribed method for the purposes of these measurements.
