## Schedule SB, Part V - Statement of Actuarial Assumptions/Methods

### Appendix A – Summary of Actuarial Methods

The ultimate cost of a pension plan is the excess of actual benefits and administrative expenses paid over actual net investment return on plan assets during the plan's existence until the last payment has been made to the last participant. A plan's "actuarial cost method" determines the expected incidence of actuarial costs by allocating portions of the ultimate cost to each plan year. The cost method is thus a budgeting tool to help ensure that a plan will be adequately and systematically funded. Annual contributions are also affected by a plan's "asset valuation method" (as well as plan provisions, actuarial assumptions, and actual plan demographic and investment experience each year).

#### Actuarial Cost Method

The actuarial cost method used for determining the Plan's ERISA funding requirements is the Unit Credit method. Under this method, an accrued benefit is determined at each active participant's assumed retirement age based on compensation and service at both the beginning and the end of the current year. The Plan's Normal Cost is the sum of the present value of the excess of each active participant's accrued benefit at the end of the current year over that at the beginning of the current year. The Plan's accrued liability is the sum of (a) the present value of each active participant's accrued benefit at the beginning of the current year plus (b) the present value of each inactive participant's benefits. This method is prescribed for ERISA funding requirements by the Pension Protection Act of 2006.

#### Asset Valuation Method

The Actuarial Value of Assets used for determining the Plan's ERISA funding requirements is equal to the Market Value of Assets. The Market Value of Assets is equal to the Fair Value of Assets as of the valuation date plus the discounted value of employer contributions made after the valuation date. These contributions are discounted to the valuation date using the Effective Interest Rate for the prior plan year.

#### PBGC Variable-Rate Premium Method

The standard method is used for the PBGC variable-rate premium calculation (adopted January 1, 2023).

#### Amortization Method

For the Plan's ERISA funding requirements, incremental Funding Shortfall amounts are amortized over a fifteenyear period, and the related shortfall amortization payment is determined on the first valuation date following the plan year in which it arises based on the segment rates used for ERISA minimum funding purposes on that date, as prescribed under IRC Section 430.

#### Changes in Actuarial Methods Since Prior Valuation

None.

##### ECONOMIC ASSUMPTIONS

###### Interest Rates

The current funding and PBGC interest rates are as follows. The funding interest rates are prescribed under IRS regulations based on the Plan Sponsor's interest rate election. The PBGC interest rates are based on the Plan Sponsor's elected method for determining the premium funding target.

|                         | Minimum Funding | Maximum Deductible | PBGC Premium |
|-------------------------|-----------------|--------------------|--------------|
| Segment 1 (0–5 years)   | 4.75%           | 4.37%              | 5.01%        |
| Segment 2 (5–20 years)  | 4.96%           | 4.96%              | 5.13%        |
| Segment 3 (20+ years)   | 5.59%           | 4.95%              | 5.15%        |
| Effective Interest Rate | 5.06%           | 4.89%              | 5.12%        |

ERISA minimum funding: 24-month average segment rates, using a zero-month lookback period, adjusted to reflect the applicable segment rate stabilization corridor (adopted January 1, 2008).

Maximum Deductible Contribution: 24-month average segment rates, using a zero-month lookback period, but not adjusted to reflect segment rate stabilization.

PBGC premium: Spot segment rates for the month preceding the valuation date, but not adjusted to reflect segment rate stabilization. The standard method (adopted January 1, 2023) is used for the PBGC variable-rate premium calculation.

###### Administrative Expenses

Expected administrative expenses payable from the trust are explicitly loaded to the Normal Cost. For the current valuation, the loading for expenses (assumed to be payable beginning-of-year) is \$3,500.

##### DEMOGRAPHIC ASSUMPTIONS

Except where noted, all demographic assumptions are based on the actuary's judgment and continual review of experience.

###### Mortality

Statutory small plan static mortality tables for 2024 based on Pri-2012 Mortality Table, with combined rates for non-annuitants and annuitants, adjusted from base year 2012 with projections to anticipate greater future longevity using the 2024 Adjusted Scale MP-2021. [Retirement](#)

The greater of normal retirement age or attained age.

###### Decrement Timing

Decrements are assumed to occur at the middle of the year, except that 100% retirement (see above) is assumed to occur at the beginning of the year.

###### Form of Payment

Lump sum distribution payable at retirement based on the 2024 IRS blended Notice 2023-73 Mortality Table and mandated segment interest rates. 100% of participants are assumed to elect the lump sum option at retirement.
