## SECTION XII ACTUARIAL COST METHODS

### **Traditional Unit Credit (TUC)**

The actuarial cost method used in the development of the minimum contribution was the unit credit cost method.

The normal cost is the sum of all the individual normal costs for each participant. For active participants, the individual normal cost is the present value of the benefit earned during the year being valued. For active participants whose credited service equals or exceeds the plan maximum, if any, and for non-active participants, the normal cost is zero.

The actuarial accrued liability is the sum of the individual accrued liabilities for all participants. The individual accrued liability for an active participant is the present value of the accrued benefit as of the valuation date. The unfunded liability is the actuarial accrued liability less the valuation assets.

The total annual cost of the plan is the normal cost plus an amount to amortize the shortfall amount.

### **Projected Unit Credit (PUC)**

The actuarial cost method used in the development of the maximum contribution was the projected unit credit cost method.

Under this method, the normal cost is the sum of the individual normal costs for all participants. For an active participant, the individual normal cost is the present value at the current age of the projected benefit at the assumed retirement age, based on the actuarial assumptions, divided by the participant's expected years of credited service at that age. For a non-active participant, the normal cost is zero.

The actuarial accrued liability is the sum of the individual accrued liabilities for all plan participants. For an active participant, the individual accrued liability is the product of the normal cost and the total years of credited service at the current age. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded actuarial accrued liability equals the actuarial accrued liability less the valuation assets.

SELECTION OF ACTUARIAL ASSUMPTIONS

Assumption		Entity Who Selects Assumption	Basis for Assumption Selection	Change in Assumption
Segment Interest Rates for Minimum Contribution	Segment 1: 5.05% Segment 2: 5.31% Segment 3: 5.59%	Prescribed by Internal Revenue Service (IRC Sec. 430(h)(2)(C))	The Funding Target Liability for Minimum Contribution is determined using three 24-month average interest rates ("segment rates"), each of which applies to cash flows during specified periods. The Plan Sponsor has elected a 2 month look back for determining these rates each Plan Year. These segment rates are adjusted by the applicable percentage of the 25-year average segment rates.	The segment 1, segment 2 and segment 3 interest rates changed from 4.75%, 5.00%, and 5.74%, respectively as of the prior measurement date, December 31, 2023, to reflect the current prescribed rates.
