Summary of Actuarial Assumptions

Many of the factors affecting the funding cost and liability cost of the Plan are variables which cannot be predicted with certainty. The following actuarial assumptions have either been prescribed by statute and regulation or selected to reasonably anticipate future experience with respect to these variables. For non-prescribed assumptions, we monitor the demographic experience of the Plan each year for material gains and losses arising from the assumptions and recommend adjustments accordingly. Other actuarial assumptions could also be reasonable and would yield different results.

Economic Assumptions

Information on economic assumptions is provided below in accordance with the Actuarial Standards of Practice (ASOP) No. 27.

Interest Rate

The current funding and PBGC interest rates are as follows. The funding interest rates are prescribed under IRS regulations based on the Plan Sponsor's interest rate election. The PBGC interest rates are based on the Plan Sponsor's elected method for determining the premium-funding target.

	Minimum Funding	Maximum Deductible
Segment 1 (0–5 years)	4.75%	4.37%
Segment 2 (5–20 years)	4.96%	4.96%
Segment 3 (20+ years)	5.59%	4.95%
Effective Interest Rate	5.22%	4.93%

ERISA minimum funding: 24-month average segment rates, without lookback, adjusted to reflect the segment rate floor and applicable segment rate stabilization.

Maximum deductible: 24-month average segment rates, without lookback, but not adjusted to reflect the segment rate floor or segment rate stabilization.

FASB ASC Topic 960: 4.50% per year

Rationale: See Investment Return.

Expense Load: Actual prior year administrative expenses plus current year PBGC premium (\$10,773 for 2024).

Rationale: Per Pension Protection Act of 2006, an expense load is required for plans that pay administrative expenses from the trust. The total expenses also includes the current year's PBGC premium.

Salary Scale: N/A

Rationale: The plan was frozen as of December 31, 2008 to benefit accruals.

Lump Sum Conversion Rate: Lump sums were converted using "annuity substitution" rules.

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods
Alliance Beverage Distributing Co. Q.V. Division Retirement Income Plan
EIN/PN: 86-0933201/090

Rationale: Plan members receive a benefit that is not lower than the annuitized value of their accumulated contributions. As required by IRS §430, lump sums were converted using “annuity substitution” rules, as prescribed by law.

Investment Return: 4.50% compounded annually. This reflects the best estimate of trust returns over the 10-20 year horizon based on current market conditions.

Rationale: In developing the investment return assumption, we reviewed the plan’s actual year-end asset allocation and historical investment performance along with expected returns for each asset class based on forward-looking data, including projections of inflation and total return growth.

Demographic Assumptions

PPA Funding Mortality: Combined Annuitant and Non-annuitant, sex distinct Static Mortality Tables for 2024, as prescribed by IRC Section 430(h)(3)(A) for IRS funding requirements.

Rationale: The basis chosen was selected by the plan sponsor. Because the Plan has less than 500 participants as of the valuation date, the plan sponsor was eligible to elect this mortality assumption, which were limited to available options prescribed by law.

Optional Form Conversion: Annuity benefits are converted to lump sums using the 2024 Applicable Mortality under 417(e).

Rationale: The basis chosen reflects the mortality tables required for converting annuities to lump sums in 2024 as mandated by the IRS.

FASB ASC Topic 960 Mortality: Pri-2012 Separate Annuitant and Non-annuitant Mortality Tables, projected with Scale MP-2021, for males and females.

Rationale: The projection reflects the Society of Actuaries’ Retirement Plans Experience Committee’s (RPEC) mortality table (Pri-2012 Mortality Tables) and mortality improvement scale (MP-2021). The plan sponsor has elected the mortality assumption.

Incidence of Disability: None.

Rationale: No disability benefits are payable from the plan.

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods
Alliance Beverage Distributing Co. Q.V. Division Retirement Income Plan
EIN/PN: 86-0933201/090

Terminations Prior To Retirement: Active employees are assumed to terminate as shown in the sample rates below.

Age	Rates
25	17.22%
35	13.70%
45	8.43%
55	1.73%

Rationale: Due to the small number of terminations, there was insufficient data to develop plan specific termination rates. Instead, termination rates were based on Termination Table T-9 from the Actuary's Handbook less the healthy mortality from the GAM1951 male mortality table.

Retirement Age: Active employees are assumed to retire as shown in the table below.

Age	Rates
55-57	3.00%
58-59	5.00%
60-61	10.00%
62	25.00%
63-64	10.00%
65	100.00%

Rationale: Due to the small number of retirements, there was insufficient data to develop plan specific retirement rates. Instead, retirement rates were based on general market trends, while also taking into account plan specific features and general observations from the participant data.

Percent Married and Assumed Age Difference Assumption: It is assumed that 100% of participants are married and that male spouses are 3 years older than female spouses.

Rationale: We believe the assumption selected is reasonable for the contingency it is measuring and is not anticipated to produce significant cumulative actuarial gains or losses over the measurement period.

Form of Benefit: 100% of participants are assumed to elect a lump sum at retirement.

Rationale: We believe this assumption selected is reasonable for the contingency it is measuring and is not anticipated to produce significant cumulative actuarial gains or losses over the measurement period.

Participant Data: As of January 1, 2024, including all eligible active, terminated vested, and retired participants as reported by Milliman's administration group.

Summary of Actuarial Methods

The ultimate cost of a pension plan is the excess of actual benefits and administrative expenses paid over actual net investment return on plan assets during the plan's existence until the last payment has been made to the last participant. A plan's "actuarial cost method" determines the expected incidence of actuarial costs by allocating portions of the ultimate cost to each plan year. The cost method is thus a budgeting tool to help ensure that a plan will be adequately and systematically funded and accounted for. Annual contributions and accounting expense are also affected by a plan's "asset valuation method" (as well as plan provisions, actuarial assumptions, and actual plan demographic and investment experience each year).

Actuarial Cost Method

The actuarial cost method used for determining the Plan's ERISA funding requirements and the FASB ASC Topic 960 values is the Unit Credit method. Under this method, an accrued benefit is determined at each active participant's assumed retirement age based on compensation and service at both the beginning and the end of the current year. The Plan's Normal Cost is the sum of the present value of the excess of each active participant's accrued benefit at the end of the current year over that at the beginning of the current year. The Plan's accrued liability is the sum of (a) the present value of each active participant's accrued benefit at the beginning of the current year plus (b) the present value of each inactive participant's benefits. This method is prescribed for ERISA funding requirements by the Pension Protection Act of 2006.

Actuarial Asset Valuation Method

The Actuarial Value of Assets used for determining the Plan's ERISA funding requirements is based on the permitted three-year asset smoothing as defined under IRS Notice 2009-22. Under this method, the Actuarial Value of Assets equals the average of the Market Value of Assets and the expected Market Value of Assets for each of the two immediately preceding plan years, but it must be within 90% to 110% of the Adjusted Market Value of Assets. The expected investment return for a plan year is based on the lesser of the expected rate of return on plan assets or the applicable statutory interest rate for the year.

Amortization Method

For the Plan's ERISA funding requirements, incremental Funding Shortfall amounts are amortized over a fifteen-year period, and the related shortfall amortization payment is determined on the first valuation date following the plan year in which it arises based on the segment rates used for ERISA minimum funding purposes on that date, as prescribed under IRC Section 430.
