Actuarial Assumptions and Methods

B. Actuarial Methods for Funding Purposes

Actuarial Cost Method

The actuarial cost method is the Unit Credit Actuarial Cost Method.

Under this cost method, the target liability is defined as the present value of the accrued benefits on the valuation date. The funding shortfall is the excess, if any, of the amount by which the target liability exceeds the actuarial value of plan assets.

The target normal cost, determined on the valuation date, is the amount required to fund the benefit expected to be earned in the current year plus the administrative expenses that are expected to be paid from the plan in the current year as required by PPA.

Asset Valuation Method

Market Value.

Statement by Enrolled Actuary

To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.
