Part V - Statement of Actuarial Assumptions

B. Actuarial Assumptions Rationale

Valuation Interest Rate	The interest rate assumption used is prescribed by IRC section 430(h) subject to specified elections by the plan sponsor.
Mortality	The mortality assumption used is prescribed by IRC section 430(h) subject to specified elections by the plan sponsor.
Turnover/Disability	Based on the lack of credible data for this plan and the insignificant impact of these assumptions on the liability, no turnover / disability was assumed.
Retirement	Based on a lack of credible data for this plan, all participants assumed to retire at normal retirement age.
Form of Payment	Due to nature of the plan, all participants assumed to elect a lump sum.
Expected Future Interest Crediting Rate	The interest crediting rate is set equal to the trust's expected return on assets.

C. Actuarial Methods

Actuarial Cost Method

The actuarial cost method is the Unit Credit Actuarial Cost Method.

Under this cost method, the target liability is defined as the present value of the accrued benefits on the valuation date. The funding shortfall is the excess, if any, of the amount by which the target liability exceeds the actuarial value of Plan Assets.

The target normal cost, determined on the valuation date, is the amount required to fund the benefit expected to be earned in the current year plus the administrative expenses that are expected to be paid from the plan in the current year as required by PPA.

Asset Valuation Method

Market value plus discounted receivables.
