SUMMARY OF ASSUMPTIONS

Funding Discount Rates IRS-Prescribed Three Segment Rates, for the month prior to the valuation date (June).

	Non-Stabilized	Limited to 25- Year Corridor
Segment 1:	4.93%	4.93%
Segment 2:	5.27%	5.27%
Segment 3:	5.26%	5.59%

The "Limited to 25 Year Corridor" rates are adjusted by the applicable maximum and applicable minimum percentages of the 25-year average segment rates, as set forth in the American Rescue Plan Act of 2021 ('ARPA-21') for use in Minimum Required Contribution calculations. The IRS Maximum Deductible Limit Calculations use the rates from the "Non-Stabilized" column above.

The interest rates used to value the Target Liability for determining the minimum and maximum contributions are prescribed by law and based on elections made by the Plan Sponsor.

Effective Interest Rate The Effective Interest Rate (EIR) for the current Plan Year is 5.34%. For the prior Plan Year, the EIR was 5.21%.

The EIR is the single rate of interest which, if used to determine the Funding Target, would equal the Funding Target determined using the Plan Sponsor's above elected discount rates. The EIR is used to discount contributions for minimum funding requirements and to accumulate excess contributions to the end of the year.

Funding Expected Return on Assets The Expected Return on Assets (EROA) used in the calculation of the Actuarial Value of Assets is the lesser of a) or b), below:

a) The Plan Sponsor's expected long-term rate of return on assets based on policy trust allocations; or

b) The third segment rate in the IRS-prescribed three-segment rate assumption, based on the elections made by the Plan Sponsor for minimum funding purposes.

The results are as follows:

Plan Year	Assumption a)	Seg. III b)	EROA (smaller of a or b)
2023	5.00%	5.74%	5.00%
2022	5.00%	5.92%	5.00%

The assumed rate of return used for determination of the actuarial value of assets was selected taking into consideration input from the Plan's asset advisor and publicly available survey information on expected returns by asset class as of July 1, 2024.

Administrative Expenses Administrative expenses are assumed to equal the prior year's actual administrative expenses.

Salary Scale Not applicable.

Rationale: The Plan is frozen.

Inflation Not applicable.

Rationale: This assumption affects long-term assumed increases in the Social Security Taxable Wage base and the IRS Compensation Limits. Because the Plan is frozen and there are no benefits over the IRS Compensation Limits, this assumption is not applicable.

Mortality	<p>Healthy and Disabled Participants - IRS §430(h) Separate Annuitant / Non-Annuitant Generational Mortality Tables for the Current Plan Year.</p> <p>Disabled Participants - Same as Healthy Participants.</p> <p>The mortality assumptions used to value the Target Liability for determining the minimum and maximum contributions are prescribed by law and based on elections made by the Plan Sponsor.</p>
Withdrawal Rates	<p>Not applicable.</p> <p>Rationale: There are no active participants for which this assumption would apply.</p>
Disability Incidence	<p>Not applicable.</p> <p>Rationale: There are no active participants for which this assumption would apply.</p>
Retirement Rates	<p>All participants are assumed to retire at Normal Retirement Age.</p> <p>Rationale: There are no active participants for which this assumption would apply.</p>
Spousal Assumptions	<p>100% of males and 100% of females are assumed to be married.</p> <p>Females are assumed to be 3 years younger than males.</p> <p>Rationale: Because the employer does not have enough data to do a fully credible experience analysis with respect to spousal information, the current assumption has been selected based on the actuary's experience with plans of a similar size, plan design, participant composition, as well as discussions with the Plan Sponsor.</p>
Benefit Commencement Age	<p>Normal Retirement Age, or valuation age, if later.</p> <p>Rationale: Because the employer does not have enough data to do a fully credible experience analysis with respect to Benefit Commencement Age, the current assumption has been selected based on the actuary's experience with plans of a similar size, plan design, participant composition, as well as discussions with the Plan Sponsor.</p>

Form of Payment

All benefits are assumed to be paid in the Normal Form defined under the terms of the Plan.

Rationale: Because the employer does not have enough data to do a fully credible experience analysis with respect to Form of Payment, the current assumption has been selected based on the actuary's experience with plans of a similar size, plan design, participant composition, as well as discussions with the Plan Sponsor.

Changes in non-required Funding assumptions since the prior valuation

None.

Changes in the prescribed assumptions since the prior valuation

The funding mortality tables were changed from the IRS 2023 Static Mortality Tables to the IRS 2024 Generational Mortality Tables.

The discount rates for funding and PBGC premiums were updated from the rates shown in the 2023 valuation report to the rates shown above.

SUMMARY OF METHODS

Minimum Funding Cost Method

The actuarial cost method used to determine the liabilities for minimum funding calculations is the Traditional Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for each participant. The individual accrued liability for a participant is the present value of the accrued benefit as of the valuation date taking into account service and/or pay as of the valuation date. The individual normal cost for a participant is the present value of the benefit expected to accrue in the plan year being valued.

If a plan is frozen, there is no normal cost attributable to benefit accruals.

Maximum Deductible Contribution Method

The actuarial cost method used to determine the liabilities for maximum deductible calculations is the Projected Unit Credit method. The objective under this method is to fund each participant's benefits under the plan as they accrue, taking into consideration expected future compensation increases. Under this cost method, the actuarial accrued liability is the sum of the individual accrued liabilities for all participants and the normal cost is the sum of the individual normal costs for all participant. The individual accrued liability for a participant is the sum of 1) the present value of the accrued benefit earned as of the valuation date taking into account service and/or pay as of the valuation date; plus 2) the present value of the accrued benefit expected to be earned because of any expected future compensation increases.

The individual normal cost for a participant is the sum of the present value of the benefit expected to accrue in the plan year being valued taking into account any expected future compensation increases.

Asset Method

We used financial data submitted by the trustee as of the valuation date without further audit. We have reviewed the information for internal consistency, and we have no reason to doubt its substantial accuracy.

Actuarial Value of Assets For funding purposes, Actuarial Value of Assets is a smoothed market value assets adjusted by the applicable percentage of gain or loss calculated in each year during the smoothing period. The gain or loss is the difference between the current year's market value, and prior year's market value brought forward with contributions, benefit payments, and administrative expenses, all adjusted at the expected interest rate to the valuation date. The expected interest rate for each year is the lesser of the expected rate of return and the third segment rate. The applicable percentage is 66-2/3% for the year preceding the valuation date, and 33-1/3% for the second year preceding the valuation date. The actuarial value of assets will be adjusted to be no greater than 110% and no less than 90% of the current (market) value of assets.

Receivable contributions are discounted back to the valuation date at the prior year's effective interest rate.

Changes in methods since the prior valuation None.
