Schedule SB, Part V — Statement of Actuarial Assumptions/Methods

Actuarial assumptions for January 1, 2024 funding valuation

Discount rate sponsor elections		
• Segment rates or full yield curve	Segment	
• Look-back months	4	
	Stabilized	Nonstabilized
• First 5 years	4.75%	3.62%
• Next 15 years	4.87%	4.46%
• Over 20 years	5.59%	4.52%
Mortality sponsor elections		
• Healthy participants	Section 430(h)(3) prescribed generational annuitant and non-annuitant mortality tables for 2024 plan year funding valuations. These tables are based on the Pri-2012 mortality tables projected with IRS-modified MP-2021 mortality improvement scale, in accordance with regulations 1.430(h)(3)-1.	
• Disabled participants	Alternative disabled life mortality tables as defined under Revenue Ruling 96-7.	
Other economic assumptions		
• Expenses	\$10,000 added to current year normal cost	
• Expected investment return	5.90% per year for 2023 5.70% per year for 2024	

Rationale for economic assumptions

- **Discount rate** – Prescribed assumptions by the IRS.
- **Expected investment return** – The expected rate of return on plan assets is based on a blend of the hypothetical past performance of the plan’s current asset mix, adjusted for current market conditions, and a reasonable range of simulated investment return using capital market assumptions published in Mercer Investment Consulting’s Capital markets Outlook for the plan’s current asset mix. The expected return on assets assumption is net of the adjusted of expected passive expenses assumed to be paid from plan assets.
- **Expenses** – The expense load is calculated by taking the prior year expenses on the trust statement and adjusting for any significant changes expected in the current year.

Demographic assumptions			
• Withdrawal	See table of sample rates.		
• Disability incidence	The rates at which participants are assumed to become disabled follow the Wyatt 1985 Disability Study Class 1 rates for males and females. See table of sample rates.		
• Retirement age	Percentage		
	Attained age	Male	Female
	Under 50	0%	0%
	50-60	3%	3%

	62-64	12.5%	12.5%
	65	30%	30%
	66-69	20%	20%
	70 and above	100%	30%
• Benefit commencement age for			
– Future vested deferred	Age 65		
– Current vested deferred	Age 65, or attained age if later		
• Spouse assumptions	Male participants	Female participants	
– Percentage married	85%	50%	
– Spouse age difference	3 years younger	3 years older	
• Form of payment	For valuation purposes, participants are assumed to elect a single life annuity.		

Table of sample rates

Attained age	Percentage			
	Withdrawal		Disability incidence	
	Male	Female	Male	Female
25	11.10%	11.10%	0.38%	0.47%
30	8.70%	8.70%	0.48%	0.80%
35	6.90%	6.90%	0.69%	1.36%
40	5.90%	5.90%	1.17%	2.11%
45	4.90%	4.90%	2.02%	3.23%
50	3.90%	3.90%	3.58%	5.33%
55	0.00%	0.00%	7.22%	9.52%
60	0.00%	0.00%	12.56%	11.59%

Rationale for demographic assumptions

- **Withdrawal** – Termination rates are based on plan sponsor expectations and represent a best estimate of future experience.
- **Retirement age** – Retirement rates are based on plan sponsor expectations and represent a best estimate of future experience.
- **Mortality for funding** – Prescribed assumptions by the IRS.

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods**• Benefit commencement age –**

- Preretirement death benefit - Surviving spouses are assumed to begin benefits at the earliest permitted commencement date because ERISA requires benefits to start then unless the spouse elects to defer. If the spouse elects to defer, actuarial increases from the earliest commencement date must be given, so that a later commencement date is expected to be of approximately equal value.
- Deferred vested benefit - Deferred vested participants are assumed to begin benefits at age 65 (or current age if later) because the plan's experience is not considered to be credible, but deferred vested early commencement factors are not subsidized so that the difference between this approach and using assumed commencement rates at earlier ages is not expected to be significant.

• Spouse assumptions –

- Percent married - The assumed percentage married is based on general population statistics on the marital status of individuals of retirement age.
- Spouse age - The assumed age difference for spouses is based on general population statistics of the age difference for married individuals of retirement age.

- **Form of payment** – The form of payment is based on the normal form of the plan. Other forms are considered to be actuarially equivalent.

Actuarial methods for funding**Asset methods**

The asset valuation method is an average of the adjusted market value for each year during the last 2 years preceding the valuation date. The adjusted market value is the market value at each determination date adjusted to the valuation date based on actual cash flows and expected interest at the lesser of the expected rate of return and the third segment rate. This amount is adjusted to be no greater than 110% and no less than 90% of the fair market value, as defined in IRC Section 430.

A characteristic of this asset method is that, over time, it is slightly more likely to produce an actuarial value of assets that is less than the market value of assets than an actuarial value that is greater than the market value.

Participant methods

Participants or former participants are included or excluded from the valuation as described below:

- **Participants included:** The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.
- **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date. For this purpose, participants with a break in service on the valuation date are treated as terminated participants.
- **Insurance contracts:** The plan does not have any insurance contracts.

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods**Minimum funding methods**

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan.

Benefits included or excluded

Unless noted below, all benefits provided by the plan are included in this valuation.

- **Plan amendments excluded:** Amendments adopted after the valuation date or effective after the current plan year are excluded from the valuation.
- **Late retirement increases:**
 - *Active participants:* The plan provides benefit suspension notices to participants who work beyond normal retirement; therefore, late retirement actuarial increases only apply to participants who defer retirement beyond age 70½.
 - *Deferred vested participants:* Current deferred vested participants over normal retirement age are valued including the late retirement actuarial increase.
- **Internal Revenue Code limitations:** The limitations of Internal Revenue Code Section 415(b) and 401(a)(17) have been incorporated into our calculations.
- **IRC Section 416 rules for top-heavy plans:** We did not test whether this plan is top-heavy (when the present value of benefits for key employees equals or exceeds 60% of the present value for all participants). However, we expect that the plan is not top-heavy due to the large number of rank-and-file participants; therefore, the funding target and target normal cost do not reflect any liability for top-heavy benefit accruals.

Plan provisions specific to funding**Additional benefits included or excluded**

- **IRC Section 436 benefit restrictions:**
 - *Unpredictable contingent event benefits:* This valuation excludes restricted contingent event benefits for events that occurred before the valuation date but includes contingent event benefits which are expected to occur on or after the valuation date regardless of anticipated funding-based limitations.
 - *Plan amendments:* See above.

Schedule SB, Part V — Summary of Plan Provisions

- *Prohibited payments:* Limitations on prohibited benefits (if any) are reflected for annuity starting dates before the valuation date but are ignored for annuity starting dates on or after the valuation date.
- *Benefit accruals:* The plan's funding target does not reflect any limitation. The target normal cost does not reflect any limitation on benefit accruals.
- **Unpredictable contingent event benefits:** The plan does not have any unpredictable contingent event benefits.
