Attachment to 2024 Form 5500
Schedule SB, Part V - Statement of Actuarial Assumptions/Methods

Summary of Actuarial Methods

Valuation Date: January 1, 2024

Actuarial Methods

Attribution Method: The valuation of retirement benefits is determined under the "Unit Credit Actuarial Cost Method", as prescribed by the Pension Protection Act of 2006 (PPA). Under this method, the regular Plan cost arises from two sources: a Target Normal Cost and an Amortization Payment for the Funding Target Shortfall.

The Funding Target is determined as the actuarial present value of benefits as of the valuation date. The Shortfall is equal to the Funding Target less the Plan Assets (with adjustments for credit balances). The amortization payment for a plan year is the aggregate total of the Shortfall Amortization payments, which are based on amounts necessary to amortize the additional Shortfall of each year in level annual installments over a 15-year period beginning with such year under the American Rescue Plan Act of 2021 (ARPA).

The Target Normal Cost is the actuarial present value of benefits expected to accrue during the valuation year plus anticipated administration expense, if any.

Asset Valuation Method: 2 year (3-point) Average Value of Assets as permitted under IRS Notice 2009-22, not less than 90% nor greater than 110% of Market Value of Assets on the valuation date.

	Minimum Funding	Maximum Deductible	PBGC Premium
Segment 1 (0–5 years)	4.75%	3.62%	3.62%
Segment 2 (5–20 years)	4.87%	4.46%	4.46%
Segment 3 (20+ years)	5.59%	4.52%	4.52%
Effective Interest Rate	5.06%	4.41%	4.41%

Rationale for assumption: This assumption is a prescribed assumption, set by the Internal Revenue Code Section 430. The sponsor has elected to utilize a 4-month look-back, with rates averaged over a 24-month period, limited to applicable minimum and maximum values in accordance with funding stabilization rules. These rates are utilized for purposes of calculating the Plan's Funding Target and Target Normal Cost for minimum funding purposes under ERISA and related tax codes.

FASB ASC Topic 960 Discount Rate and Expected Return on Assets:

Assumption: 5.25%, compounded annually. This is the assumed rate of return for the Plan's entire portfolio of assets, net of investment expenses and including inflation (CPI) of 2.25% as indicated below.

Rationale for assumption: In developing the expected return on assets assumption, we reviewed the Plan's actual asset allocation along with forward-looking data such as projections of inflation and total return growth. Mean returns, standard deviations and correlations between investment categories were determined and used in the investment return assumption.

CPI:

Assumption: 2.25%, compounded annually. This assumption represents an estimate of future experience and is based in part on observations of estimates inherent in market data.

Rationale for assumption: We considered historical and projected rates for this assumption. The assumption reflects relevant economic data as of the measurement date, and represents our current best estimate of future experience.

Administrative Expenses:

Assumption: Actual prior year expenses.

DEMOGRAPHIC ASSUMPTIONS

Mortality:

ERISA minimum funding, Maximum Deductible Contribution and PBGC premium:

Assumption: 2024 combined static mortality tables as promulgated by the IRS for plan years beginning in 2024.

Rationale: The mortality assumption is one of the available tables permitted by the IRS for PPA funding.

Change in Assumption: Mortality tables were updated from the statutory tables applicable for 2023 to the statutory tables applicable for 2024.

FASB ASC Topic 960:

Assumption: PRI-2012 Total Dataset Employee/Retiree Amount-Weighted Mortality Tables, with contingent Survivor Table for beneficiaries, projected from 2012 with improvement scale MP-2021, males and females.

Rationale for assumption: The plan is not large enough to develop a credible mortality table based exclusively on plan experience. We have relied on the above-mentioned published mortality tables in which credible mortality experience was analyzed.

Withdrawal Rates:

Assumption: Active employees are assumed to terminate based on the 50% of the rates from the SOA 2003 Small Plan table. Terminated vested employees are assumed to retire at age 65.

Rationale for assumption: Due to the small number of terminations, there was insufficient data to develop plan specific termination rates. Instead, termination rates were based on the Society of Actuaries 2003 Small Plan table – with adjustment to reflect a high-level comparison of the actual and expected terminations based on that table.

Retirement Rates:

Assumption: Once eligible for retirement, all active participants are assumed to retire at the following rates:

Age	Retirement Rate
55	10%
56	5%

Sekisui Specialty Chemicals Union Defined Benefit Plan
EIN/PN: 80-0404851/002

Schedule SB, Part V - Statement of Actuarial Assumptions/Methods

57	5%
58	5%
59	5%
60	15%
61	15%
62	30%
63	30%
64	30%
65+	100%

Terminated vested participants are assumed to retire at age 65.

Rationale for assumption: Due to the small number of retirements, there was insufficient data to develop plan specific retirement rates. Instead, retirement rates were based on general market trends, while also taking into account plan specific features and general observations from the participant data.

Benefit Commencement Date for Preretirement Death Benefit:

Assumption: The earliest date the participant would have been first eligible for early retirement.

Rationale for assumption: This assumption represents the best estimate of future experience.

Beneficiary:

Assumption: 75% of participants assumed to be married with females 3 years younger than males.

Rationale for assumption: This assumption represents the best estimate of future experience.

Form of Payment:

Assumption: Participants are assumed to elect Single Life Annuity.

Rationale for assumption: This assumption represents the best estimate of future experience.
