The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

## Actuarial Cost Methods

**Funding Target Liability:** As required by PPA, the Traditional Unit Credit Cost Method is used.

**Actuarial Value of Assets:** Market Value, as provided by the Trustee.

## Funding Target Liability

**Valuation Date:** January 1, 2025

**Demographic Information:** The demographic information was provided as of January 1, 2025 by Revere Copper Products, Inc. Although we did not audit the data, we did review the data for reasonableness.

**Actuarial Valuation Software:** For purposes of developing the projected future benefit payments as well as determining attributed liabilities and normal costs as of the valuation date, we utilized the ASC software platform developed by Actuarial Systems Corporation. We believe this externally developed valuation system is appropriate, was used for its intended purpose, and did not produce unreasonable results.

**Interest Rates for Minimum Required Contribution:** The adjusted 24-month average January 2025 funding segment rates using 25-year average segment rate corridors were utilized as prescribed by IRC Section 430(h), after reflection of interest rate stabilization provisions included in various legislation.

Segment	Interest Rate
Segment 1	5.00%
Segment 2	5.27%
Segment 3	5.59%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

**Effective Interest Rate:** 5.21%

**Interest Rates for Maximum Alternative Contribution:** The January 2025 funding segment rates were utilized as prescribed by IRC Section 430(h), and elected by Revere Copper Products, Inc. without reflection of the interest rate stabilization provisions included in various legislation. These rates were utilized to determine the LDRM calculations

Segment	Interest Rate
Segment 1	5.00%
Segment 2	5.27%
Segment 3	5.40%

**Rate of Compensation Increases:** N/A

**Retirement Rates:** N/A – All retirees

**Post-retirement Mortality:** The base mortality tables are the blended sex distinct Pri-2012 mortality tables. The base mortality table is adjusted as described in Internal Revenue Regulation 1.430(h)(3)-1(c)(2) by projecting mortality improvements using the 2024 Adjusted Scale MP-2021 Rates from the year 2012 through 2025, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

**Administrative Expenses:** Actual plan expenses, not including investment advisory fees, paid out of the trust during the previous plan year, rounded to the nearest thousand dollars - \$6,000.

**Form of Benefit:** 100% of active and terminated vested participants are assumed to receive an immediate life annuity at their assumed retirement age.

**Statement by Enrolled Actuary**

To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.
