## Actuarial Assumptions and Methods

The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

### Funding Target Liability

**Valuation Date:** January 1, 2024

**Demographic Information:** The demographic information was provided as of January 1, 2024 by Carthage Savings and Loan, National Association. Although we did not audit the data, we did review the data for reasonableness.

**Actuarial Cost Method:** As required by PPA, the Traditional Unit Credit Cost Method was used.

**Asset Valuation Method:** The fair market value of assets was used, based on information supplied by Carthage Savings and Loan, National Association as of December 31, 2023.

**Actuarial Valuation Software:** For purposes of developing the projected future benefit payments as well as determining attributed liabilities and normal costs as of the valuation date, we utilized the ProVal software platform developed by Winklevoss Technologies. We believe this externally developed valuation system is appropriate, was used for its intended purpose, and did not produce unreasonable results.

**Spouse Assumptions:** 80% of participants not currently collecting benefits are assumed to be married, with male spouses assumed to be three years older and female spouses assumed to be three years younger than the participant. The assumption was based on national averages.

**Interest Rates for Minimum Required Contribution:** The September 2023 funding segment rates were utilized as prescribed by IRC Section 430(h) and elected by Carthage Savings and Loan, National Association. Below, please find the segment rates after reflection of the segment rate stabilization provisions of IRC Section 430(h)(2)(C)(iv).

Segment	Interest Rate
Segment 1	4.75%
Segment 2	4.87%
Segment 3	5.59%

Effective Interest Rate
5.18%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

**Interest Rates used to determine Maximum Recommended Contribution:** Below, please find the segment rates without reflection of the segment rate stabilization provisions of IRC Section 430(h)(2)(C)(iv). These rates were utilized to determine the low-default risk obligation measurement (“LDRM”) of the accrued benefits as of the Valuation Date.

Segment	Interest Rate
Segment 1	3.62%
Segment 2	4.46%
Segment 3	4.52%

Effective Interest Rate
4.45%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

**Rate of Compensation Increase:** 3.00% based on the Company’s review of historical experience and future expectations based on market conditions as of the measurement date. After discussions with the client and a review of current market factors, the selected salary scale assumption does not significantly conflict with what we believe is reasonable for the assumption and purpose of the measurement.

**Pre-Retirement Mortality:** Pre-retirement mortality was deemed to be immaterial and therefore was not assumed.

**Post-Retirement Mortality:**

*Base mortality table:* The blended sex distinct Amount-Weighted Pri-2012 mortality tables for employees and healthy annuitants.

*Mortality improvements:* The base mortality table is adjusted by projecting mortality improvements using the IRS 2024 Adjusted Scale MP-2021 from the year 2012 through 2024, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

**Assumed Retirement Age:** Employees were assumed to retire at the earlier of age 65 with five years of participation, age 62 with 20 years of vesting service, or the sum of a participant’s attained age and vesting service equals 80.

**Turnover:** None assumed.

**Disability:** Rates of decrement due to disability assumed to be 0%.

**Administrative Expenses:** Actual plan expenses, not including investment advisory fees, paid out of the trust during the previous plan year rounded to the nearest thousand.

**Form of Benefit:** Active and terminated vested participants are assumed to receive an immediate life annuity at their assumed retirement age.
