Assumptions prescribed by law

Mortality

Before benefit payment period
 None.

During benefit payment period
 IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.

Assumptions selected by actuary

Asset return 5.50% for the current plan year.
 The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. For details, see the Long-Term Capital Market Assumptions link.

Expected expense The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets, with an updated estimate of PBGC premiums. This is the best estimate available of upcoming year's expenses.

Retirement Active participants

Age	Probability of retirement
55-61	3.00%
62-64	15.00%
65-69	50.00%
70	remaining participants

Inactive participants are assumed to retire at age 65.
 This assumption is based on the results of recent experience analysis and anticipated future experience.

Disability None.

Marriage 90% married; husbands are 3 years older than wives.

This assumption does not have material impact on the results of this report and has been selected based on our best estimate of active workforce.

Withdrawal None.

Form of benefit 50% of active participants are assumed to elect a lump sum upon retirement. 50% of active participants are assumed to elect normal form upon retirement. 100% of terminated vested participants are assumed to elect the normal form upon retirement.

This assumption is based on the results of recent experience analysis and anticipated future experience.

The single sum benefit is based on the Applicable Mortality and the plan's funding target interest rates, as prescribed.

Methods prescribed by law

Liability measure Funding target is the present value of the benefits accrued on the valuation date.
Target normal cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.

Lump sum payments Lump sum payments are valued using the plan's funding target interest rates as required, per IRS guidance. These rates are currently higher than the actual rates used to determine lump sum distributions. Therefore, plan liabilities do not currently recognize this additional cost and this may result in the plan not accumulating adequate assets. You may wish to consider additional contributions.

Methods selected by plan sponsor

Asset method The asset valuation method is prescribed by law for plans that elect to use a value other than market value.
For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years.
The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the maximum allowable rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value.

When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market value.

Segment rates 24-month average with no weighting to prior law basis. Use rates where December is the last month included in the average.

PBGC premium basis

Variable rate premiums are calculated using census, market value of assets and the one-month average of corporate bond rates in effect on the valuation date. You elected this Standard interest method for the 01/01/2023 plan year and the method must be used for five years before a change can be made.

Segment 1 years 0-5	Segment 2 years 5-20	Segment 3 years 20+
5.01%	5.13%	5.15%

Methods elected by actuary

Retirees

Assets and liabilities for current and future retirees are included.

Vested benefits

A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant’s vesting percentage applicable to each benefit on the valuation date.

The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post retirement death benefits for non-retired participants except as noted in the Plan provisions.

Assumptions and methods elected by actuary - plan accounting (ASC 960)

With the exceptions below, all assumptions and methods are the same as those used in determining your plan’s regular funding target and target normal cost.

Mortality

Based on Pri-2012 White collar base rate mortality table projected generationally using the using the Principal Mortality Improvement Scale (Principal 2023).

Mortality base rates

Before benefit payment period

Employee amount-weighted, male and female

During benefit payment period

Retiree amount-weighted, male and female

The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The White collar base rate table was selected based on information provided by the plan sponsor.

Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe “Approach 2” is reasonable for this plan.

Mortality improvement	<p>MP-2021 is the most recent improvement scale published by the SOA in October 2021.</p> <p>In selecting this assumption, we considered the other parameters available in the MIM-2021-v4 application tool issued by the SOA in October 2023 and consider the selections in MP-2021 reasonable. Based on the sponsor's input, plan experience does not show a need for long-term excess death or Covid death load adjustments.</p>
Interest rate used to value liabilities	<p>5.00%</p> <p>The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes' arithmetic returns of the plan's target asset allocation, and then converted to the geometric under lognormal distribution assumption. For details, see Long-Term Capital Market Assumptions link.</p>
Treatment of administrative expenses	<p>No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.</p> <p>Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.</p> <p>Note - expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception – contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.</p>
Basis for lump sums	<p>Interest rate</p> <p>Based on the three segment yield curve: 3.55%/3.95%/4.95%</p> <p>The plan document defines the lump sum interest rate based on IRC §417(e) rates which closely tie to the high quality corporate bond yields. According to our most recent study, the long-term expected yields for short/intermediate/long corporate bonds are 3.55%/3.95%/4.95%. For details, see Corporate AA yield in Table 3 of Long-Term Capital Market Assumptions link.</p> <p>Mortality</p> <p>We have selected the same mortality assumption for lump sum payments, but with a 50/50 blend of male and female total dataset base rates and mortality improvement scales. This reflects the IRS practice of defining lump sum mortality on a unisex basis.</p>

Schedule SB, Line 22 - Description Of Weighted Average Retirement Age
 Ervin Industries, Inc. Pension Plan for Salaried, Non-Union Employees
 EIN 38-0522445 Plan No. 004

The weighted average retirement age is weighted by the expected percentage of active participants retiring at each age. The retirement rate reflects only those participants who meet retirement eligibility. An active participant working past assumed retirement age is expected to retire at current age.

Significant Event

The enrolled actuary has not been made aware that any significant events have occurred during the year.

Schedule SB, Line 25 – Change in Method
Ervin Industries, Inc. Pension Plan for Salaried, Non-Union Employees
EIN 38-0522445 Plan No. 004

The Employee Retirement Income Security Act of 1974, Section 103(c)(4), requires the plan administrator to furnish an explanation of a change in the enrolled actuary as part of the annual report. There was a change in enrolled actuaries since last year. The actuarial valuation work continues to be done by Principal Life Insurance Company. However, the individual involved with this plan as the enrolled actuary has changed due to a change in the plan assignment among enrolled actuaries at Principal Life Insurance Company.

Schedule SB, Line 24 – Change in Actuarial Assumptions
 Ervin Industries, Inc. Pension Plan for Salaried, Non-Union Employees
 EIN 38-0522445 Plan No. 004

Certain non-prescribed assumptions have been changed since last year. These assumptions were changed to better reflect the anticipated experience of your plan. See the attachment, Part V – Statement of Actuarial Assumptions/Methods, for the rationale for each assumption.

The form of benefit and basis has changed from 60% people electing a lump sum upon retirement. We’re now assuming 50% of active participants will elect a benefit paid in a lump sum at the assumed retirement ages based on the Applicable Mortality and the plan’s funding segment rates.

The retirement rate table for the active participants has been changed from:

Age	Probability of retirement	Age	Probability of retirement
55	5.00%	61	10.00%
56	3.00%	62	25.00%
57	3.00%	63	10.00%
