Assumptions selected by actuary

Inflation	<p>2.25% increase per year.</p> <p>Our long-term inflation assumption considered the current economic environment, recent and historical data, and forecasts from Federal Reserve Bank FOMC, Congressional Budget Office, and Survey of Professional Forecasters. See Long-Term Capital Market Assumptions link.</p>						
Asset return	<p>5.25% for the current plan year.</p> <p>The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. For details, see the Long-Term Capital Market Assumptions link.</p>						
Expected expense	<p>The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets. This is the best estimate available of upcoming year's expenses.</p>						
Retirement	<p>Active and inactive participants</p> <table border="1" data-bbox="599 1136 1050 1304" style="margin-left: 20px;"> <thead> <tr> <th style="text-align: center;">Age</th> <th style="text-align: center;">Probability of retirement</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">55-64</td> <td style="text-align: center;">5%</td> </tr> <tr> <td style="text-align: center;">65</td> <td style="text-align: center;">100%</td> </tr> </tbody> </table> <p>This assumption is based on the results of recent experience analysis and anticipated future experience. Some participants retire early since the plan provides an early retirement subsidy beginning at age 55.</p>	Age	Probability of retirement	55-64	5%	65	100%
Age	Probability of retirement						
55-64	5%						
65	100%						
Disability	<p>None. This plan does not offer a subsidized disability benefit therefore the disability assumption is built into the withdrawal assumption.</p>						
Withdrawal	<p>None. Due to the size of the plan and limited experience, we're not recognizing a withdrawal assumption prior to retirement.</p>						
Form of benefit	<p>Participants are assumed to receive their benefits on the normal form at the assumed retirement age.</p> <p>This assumption is based on the results of recent experience analysis and anticipated future experience.</p>						
Retirement cost of living adjustment	<p>2.25% per year</p> <p>Retirement Cost of Living Adjustment should be consistent with the inflation assumption, not to exceed 4.00% as defined by the plan.</p>						

Methods prescribed by law

**Liability measure** Funding target is the present value of the benefits accrued on the valuation date.  
 Target normal cost is based on benefits expected to accrue during the current plan year.

Methods selected by plan sponsor

**Asset method** The asset valuation method is prescribed by law for plans that elect to use a value other than market value.  
 For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years.  
 The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the maximum allowable rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value.

When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market value.

**Segment rates** 24-month average with no weighting to prior law basis. Use rates where August is the last month included in the average.

**PBGC premium basis** Variable rate premiums are calculated using census, market value of assets and the one-month average of corporate bond rates in effect on the valuation date. You elected this Standard interest method for the 01/01/2024 plan year and the method must be used for five years before a change can be made.

Segment 1 years 0-5	Segment 2 years 5-20	Segment 3 years 20+
5.01%	5.13%	5.15%

Methods elected by actuary

**Retirees** Assets and liabilities for current and future retirees are included.

**Vested benefits** A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant’s vesting percentage applicable to each benefit on the valuation date.

The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post retirement death benefits for non-retired participants except as noted in the Plan provisions.

Assumptions and methods elected by actuary - plan accounting (ASC 960)

With the exceptions below, all assumptions and methods are the same as those used in determining your plan’s regular funding target and target normal cost.

**Mortality** Based on Pri-2012 Total dataset base rate mortality table projected generationally using the using the Principal Mortality Improvement Scale (Principal 2023).

**Mortality base rates**

**Before benefit payment period**  
None

**During benefit payment period**  
Retiree amount-weighted, male and female

The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The Total dataset base rate table was selected based on information provided by the plan sponsor.

**Mortality improvement** Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe “Approach 1” is reasonable for this plan.

Principal 2023 MI scale is based on MIM-2021-v4 application tool issued by SOA in October 2023 with the following parameters:

Parameter	Principal 2023
Historical dataset	SSA
Whittaker-Henderson Graduation	Order 3
Interpolation Structure	Basic
Graduated MI data last year (“jumping off” point)	2017
H/D transition ultimate year by age/cohort	2029/2029
Weight placed on interpolation by cohort	50%
Initial Slope periods (constraint)	2016-2017 (0.000)
LTR	SSA LTR 2023
COVID-19 or Excess load	None <sup>1</sup>

<sup>1</sup>Based on the sponsor’s input, plan experience does not show a need for long-term excess death or Covid death load adjustments.

See [Mortality documentation](#) for rationale and additional information.

Mortality improvement	<p>MP-2021 is the most recent improvement scale published by the SOA in October 2021.</p> <p>In selecting this assumption, we considered the other parameters available in the MIM-2021-v4 application tool issued by the SOA in October 2023 and consider the selections in MP-2021 reasonable. Based on the sponsor's input, plan experience does not show a need for long-term excess death or Covid death load adjustments.</p>
Interest rate used to value liabilities	<p>4.75%</p> <p>The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes' arithmetic returns of the plan's target asset allocation, and then converted to the geometric under lognormal distribution assumption. For details, see Long-Term Capital Market Assumptions link.</p>
Treatment of administrative expenses	<p>No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.</p> <p>Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.</p> <p>Note - expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception – contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.</p>

Schedule SB, Lines 6, 18, 31, 32 - Explanation of Short Plan Year  
Air & Space Forces Association Retirement Income Plan  
EIN 52-6043929 Plan No. 001

The plan year beginning 01/01/2024 reflects a short plan year ending on the termination date of 09/30/2024. The asset distribution date is 06/04/2025.

The annual cost is prorated for the period from 01/01/2024 to 09/30/2024. This short period is based on the plan termination date of 09/30/2024 and reflects the final IRS minimum contribution regulations. Quarterly contribution requirements have been adjusted to reflect the short period.

Schedule SB, Line 2a - Explanation of Assets  
Air & Space Forces Association Retirement Income Plan  
EIN 52-6043929 Plan No. 001

The market value of assets on line 2a does not equal assets shown on Schedule H, Schedule I or Form 5500-SF. Schedule H, Schedule I and Form 5500-SF use the full value of contributions received after plan year end. Line 2a includes the value of \$1,500,000 contributions received after the plan year end with a discounted value of \$1,473,994.

Line 2a includes assets allocated for retirees' guaranteed benefits of \$3,003,841.

Schedule SB, Line 22 - Description Of Weighted Average Retirement Age  
 Air & Space Forces Association Retirement Income Plan  
 EIN 52-6043929 Plan No. 001

The weighted average retirement age is weighted by the expected percentage of active participants retiring at each age. The retirement rate reflects only those participants who meet retirement eligibility. An active participant working past assumed retirement age is expected to retire at current age.

#### Definitions

Cost of living adjustment (COLA)	<p>Effective May 1st of each calendar year following the calendar year of the Annuity Starting Date. The monthly retirement benefit is multiplied by the ratio of the CPI for January of the current year to the CPI for January of the preceding calendar year. This COLA will not be:</p> <ul style="list-style-type: none"><li>More than 104% or less than 96% of the current retirement benefit, or</li><li>More than 150% of the base retirement benefit, or</li><li>Less than the participant's or beneficiary's base retirement benefit</li></ul>
Optional forms of benefit payments	<p>The optional forms of benefit payments are:</p> <ul style="list-style-type: none"><li>Monthly annuity payable for life or 10 years certain and life</li><li>Monthly annuity payable as a survivorship life annuity with survivorship percentages of 50, 66 2/3, 75 or 100</li><li>Level income (social security adjustment)</li></ul> <p>The optional form conversion basis is 6.0% interest and 1971 GAM for male lives with a 2-year setback for participants and a 4-year setback for beneficiaries.</p> <p><a href="#">Lump sum provisions</a></p> <p>Small amount force out (SAFO) – allowed up to \$7,000.</p> <p>Lump sums in excess of SAFO - aren't allowed.</p> <p>Conversion – deferred rate with the applicable interest rate and applicable mortality table as set forth in Code Section 417. The applicable interest rate uses the second calendar month preceding the first day of the stability period which is the plan year. Level income option also uses these assumptions.</p>
