• First 5 years	4.75%	3.62%
• Next 15 years	4.87%	4.46%
• Over 20 years	5.59%	4.52%
<b>Mortality sponsor elections</b>		
• Healthy participants	Section 430(h)(3) prescribed separate static annuitant and nonannuitant mortality tables. These tables are based on the RP-2006 mortality tables with IRS-developed adjustment (RP – 2014 mortality table, with improvement beyond 2006 removed) and projected with mortality improvement scale MP-2021.	
• Pre-1995 disabilities	Same as healthy	
• Post-1994 disabilities	Same as healthy	
<b>417(e) lump sums</b>	Liabilities are determined based on the underlying annuity used by the plan to determine the lump sum amount, rather than valuing the lump sum payment. This annuity is valued based on funding interest rates rather than 417(e) rates and current year 417(e) unisex generational mortality.	
<b>Other economic assumptions</b>		
• Salary increases	Not applicable	
• Flat-dollar benefit increases	None	
• Social Security wage base	Not applicable	
• Inflation	2.20% per year	
• Expected investment return	TBD for 2024, 5.20% for 2023, 2.14% for 2022	
• Expenses	\$55,000 added to current year normal cost	

**Rationale for Economic Assumptions**

- Expected investment return – This assumption is based on the median (50th percentile) simulated investment return using capital market assumptions published in Mercer Investment Consulting’s Capital Markets Outlook for the plan’s target asset mix.
- Expenses – Prior year’s administrative expenses adjusted for known events expected to have significant impact on expenses, including changes in PBGC premiums (rounded up to nearest \$1,000).
- Discount Rate - Assumptions prescribed by IRS. The Plan Sponsor elected this methodology from alternative IRS prescribed options

**Schedule SB, Part V — Statement of Actuarial Assumptions/Methods**

• Withdrawal	See table of sample rates.	
• Disability incidence	1985 CCA Pension Disability Table Occupational Class 1 rates. See table of sample rates.

• Future disabilities <sup>1</sup>	100%	
• Future deaths	100%	
• Current vested deferred	100%	
<b>Unpredictable contingent event assumptions</b>	Not applicable	

**Rationale for Demographic Assumptions**

- Mortality Table - Assumptions prescribed by IRS.
- Per the prior plan actuary, the withdrawal and disability incidence rates were based on published tables for pension participants believed to have similar characteristics to the plan population, while the retirement assumption was based on plan sponsor expectations for the future. With no evidence to the contrary, IDEX Corporation agreed to continue using the same assumptions. Experience will be monitored and changes suggested where reasonable

**Actuarial methods****Asset methods**

The asset valuation method is an average of the adjusted market value for each year during the last 2 years preceding the valuation date. The adjusted market value is the market value at each determination date adjusted to the valuation date based on actual cash flows and expected interest at the lesser of the expected rate of return and the third segment rate. This amount is adjusted to be no greater than 110% and no less than 90% of the fair market value, as defined in IRC Section 430.

A characteristic of this asset method is that, over time, it is slightly more likely to produce an actuarial value of assets that is less than the market value of assets than an actuarial value that is greater than the market value.

**Participant methods**

Participants or former participants are included or excluded from the valuation as described below:

- **Participants included:** The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.
- **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date. For this purpose, participants with a break in service on the valuation date are treated as terminated participants.
- **Insurance contracts:** The plan does not have any insurance contracts

**Schedule SB, Part V — Statement of Actuarial Assumptions/Methods****Minimum funding methods**

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan.
