The Omaha Home for Boys Pension Plan
Plan: 002 EIN: 47-0376529
Schedule SB, Part V - Statement of Actuarial Assumptions/Methods

Actuarial Cost Method

Annual costs were calculated using the Traditional Unit Credit Actuarial Cost Method as required by the Pension Protection Act of 2006. The Traditional Unit Credit Method is one of the Accrued Benefit Actuarial Cost Methods.

Under the Traditional Unit Credit Cost Method, benefits are assigned to each year and are valued as they accrue.

The target normal cost for each year is defined as the actuarial present value of retirement and ancillary benefits that are earned for each active participant and the expected administrative expenses to be paid from plan assets in the current year.

The funding target is defined as the actuarial present value of retirement and ancillary benefits that have been earned in years of service prior to the current year.

Asset Valuation Method

For funding purposes, the value of plan assets is based on the two-year smoothing method. This method determines the value of plan assets by averaging the market value as of the valuation date and the adjusted market values as of the preceding two valuation dates. The adjusted market values are determined in accordance with IRS Notice 2009-22. This value of plan assets can be no greater than 110% of the market value nor less than 90% of market value as of the valuation date.

Contributions for the prior plan year made after the end of the plan year are included in the current year's market value of assets at their discounted value, based on the prior year's effective interest rate.
