Schedule SB, Part V – Statement of Actuarial Assumptions / Methods

Actuarial Cost Methods:

Traditional Unit Credit

The actuarial cost method used in the valuation was the traditional unit credit cost method.

The normal cost is the sum of all the individual normal costs for each participant. For active participants, the individual normal cost is the present value of the benefit earned during the year being valued. The normal cost is zero for active participants whose credited service equals or exceeds the plan maximum, and for non-active participants.

The actuarial accrued liability is the sum of the individual accrued liabilities for all participants. The individual accrued liability for an active participant is the present value of the accrued benefit as of the valuation date. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded liability is the actuarial accrued liability less the valuation assets.

The total annual cost of the plan is the normal cost plus an amount to amortize the shortfall amount.

Projected Unit Credit

The actuarial cost method used in the development of the maximum contribution and the at-risk liabilities, if applicable, was projected unit credit cost method.

Under this method, the normal cost is the sum of the individual normal costs for all participants. For an active participant, the individual normal cost is the present value at the current age of the projected benefit at the assumed retirement age, based on the actuarial assumptions, divided by the participant's expected years of credited service at that age. For a non-active participant, the normal cost is zero.

The actuarial accrued liability is the sum of the individual accrued liabilities for all plan participants. For an active participant, the individual accrued liability is the product of the normal cost and the total years of credited service at the current age. For non-active participants, the individual accrued liability is the present value at the current age of future benefits. The unfunded actuarial accrued liability equals the actuarial accrued liability less the valuation assets.

Asset Valuation Method:

The actuarial value of the assets is determined by using the average value of the fair market value of the plan's assets at the valuation date over a 24 month period adjusted for contributions, distributions, expected earnings, and includes contributions receivable discounted to the plan year end. The asset value determined under this method is adjusted to be no greater than 110% and no less than 90% of the fair market value of assets.

Participants included in valuation:

All employees who are eligible to participate as of the valuation date, plus retirees, beneficiaries and terminated participants entitled to current or future benefits.

Schedule SB, Part V – Statement of Actuarial Assumptions / Methods (continued)

Death Benefit

Vesting

Eligibility

5 years of service

Amount of Benefit

Accrued benefit payable at normal retirement date or at early retirement. If paid at early retirement, the benefit is reduced for each month that retirement precedes age 65.

Normal Form of Payment

If married, benefits are paid in the form of a joint and survivor annuity. If not married, benefits are payable for the life of the participant.

Optional Forms of Payment

The plan provides the following optional forms of payment: Life annuity, Joint and Survivor annuities (25%, 50%, 75%, and 100%), and a 10-year certain and life annuity, and a lump sum payment if the lump sum value is less than \$5,000.

Assumptions for Optional Forms of Payment

Optional forms of payment are actuarially equivalent to the normal form of payment for single participants, i.e. the life annuity option. The conversion factors are calculated using actuarial equivalence, which by definition is based on the UP-1984 Mortality Table with a three-year setback for Participants and without a setback for Beneficiaries and an interest rate of 7%.

The lump sum value is calculated using the IRS Lump Sum Mortality Table and the segment rates published for December of the prior plan year.

Contributions

The employer pays the total cost of the plan.
