Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

This report assumes the plan will exist as an ongoing entity. All numbers presented are based on this ongoing plan concept.

Discounted Projected Accrued Benefit Cashflows

Under the Pension Protection Act of 2006, all costs are determined by projecting cashflows corresponding to the current accrued benefits, and these cashflows are discounted back to the valuation date using a series of discount rates. The accrued benefits are determined as of the valuation date, and the cashflow projection reflects the probability of each contingency available under the plan (such as turnover, mortality, retirement or disablement). Cashflows for current nonactive participants are similarly determined.

There are three exceptions to the general rule that only benefits accrued as of the valuation date are included in the cashflow projection:

- In determining the target normal cost, the incremental effect on cashflows of benefits expected to accrue during the plan year by active participants is projected.
- In determining the maximum deductible contribution, the incremental effect on cashflows of the effect on expected future pay increase by active participants is projected. For this projection, accrued service on the valuation date is fixed, but pay is projected to the different contingencies. In a final pay plan, this will result in larger “accrued benefits” in the cashflows.
- In determining the premium funding target for PBGC liability determinations, only vested accrued benefits are considered when projecting cashflows. PBGC regulations require the inclusion of the QPSA benefits corresponding to current vested benefits as also being vested for this determination.

None of the exceptions impact the cashflows to current nonactive participants.

Valuation of Liabilities

All active participants included in the valuation are assumed to earn one full year of credited service and one full year of vesting service for each future year while still employed. No liability is held for non-vested, inactive employees regardless of whether or not they have completed a one-year break-in-service. Costs for ancillary benefits provided by the Plan have been determined in the same manner and on the same basis as costs for normal retirement benefits. The Defined Benefit Plan limits of Section 415(b) have been reflected in the valuation.

Valuation of Assets

The actuarial value of assets is equal to the fair market value as reported by the trustee plus the discounted value of any contributions receivable with regard to the completed plan year.
