## Actuarial Assumptions and Methods

---

### Actuarial Assumptions

#### a. Economic Assumptions

##### (i) Interest Rates

- Funding Rate

January 2024 Segment Rates as adjusted by the ARPA legislation (4.75%, 4.96%, 5.59%), effective rate of 5.09% for 2024.

##### (ii) Expenses

Administrative expenses of \$20,538 were estimated to be equal to the prior year's actual administrative expenses, paid from the trust in the current Plan Year and were included in the Normal Cost.

##### (iii) Salary Increases

Not Applicable

#### b. Demographic Assumptions

##### (i) Mortality

The IRS 2024 Static Separate Annuitant/Non-Annuitant Mortality Tables.

##### (ii) Termination

Terminations other than retirement and death are assumed to occur according to the following rates:

<u>Age</u>	<u>Annual Terminations per 100</u>
25	5.35
35	4.80
45	3.75
55	2.35

##### (iii) Retirement

100% at age 65. 100% at age 65 for terminated vested participants.

##### (iv) Form of Payment

50% of future retirements are assumed to elect a single life annuity and 50% are assumed to elect a joint & 50% contingent survivor form.

## Actuarial Assumptions and Methods

---

(v)	Marital Status	70% of participants are assumed to be married and males are assumed to be 3 years older than their spouses.
(vi)	Actuarial Value of Assets	Market Value
(vii)	Actuarial Cost Method	Unit Credit

### Actuarial Methods

a. Funding Method

The Pension Protection Act (PPA) requires the calculation of the Target Liability and Target Normal Cost. The Target Liability represents the present value of benefits accumulated as of the valuation date. The present value is calculated by projecting future payments of the accrued benefit, adjusting for probability of receipt according to demographic assumptions, and discounting the payments back to the valuation date using the segment interest rates. Payments expected within five years of the valuation date are discounted using the first segment rate, payments expected at least five but within 20 years of the valuation date are discounted using the second segment rate, and payments expected at least 20 years from the valuation date are discounted using the third segment rate. The calculation of the Target Normal Cost is identical, except that the future payment stream is based on the benefit expected to accrue during the plan year.

b. Asset Valuation Method

The actuarial value of assets is defined as the market value including accrued contributions.

c. Valuation Procedures

- **Participants excluded:** No liability is held for non-vested, terminated employees, even if a break-in-service had not occurred as of the valuation date.
- **Participants included:** The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.

### Changes in Actuarial Assumptions and Methods

All plan provisions, actuarial methods, and assumptions are the same as those used in the prior valuation except interest rates and mortality, which are updated at each valuation date as required by federal regulations.
