Statement by Enrolled Actuary
To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

Actuarial Assumptions and Methods for Funding

ERISA Interest Rates as required by IRC Section 430 based on plan sponsor election of the look-back month for the segment rates:

“Minimum” means for the purpose of calculating the PPA funding liability and normal cost for the minimum required contribution.

“Maximum” means for the purpose of calculating the PPA funding liability and normal cost for the maximum tax-deductible contribution.

Purpose	2024 Plan Year		2023 Plan Year	
	Minimum	Maximum	Minimum	Maximum
Interest Rate Type	Stabilized	Non-Stabilized	Stabilized	Non-Stabilized
Segment rates or full yield curve	Segment	Segment	Segment	Segment
Look-back months	4	4	4	4
First 5 years	4.75%	3.62%	4.75%	1.41%
Next 15 years	4.87%	4.46%	5.00%	3.09%
Over 20 years	5.59%	4.52%	5.74%	3.58%
Applicable Law for the segment rates corridor	ARPA	Not Applicable	ARPA	Not Applicable

Interest Crediting Rate: 5.25% for 2024, graded down 25 basis points to an ultimate rate of 4.25% for 2028+. This is based on the actuary’s best estimate of future investment performance.

Administrative Expenses included in Target Normal Cost: No administrative expenses are included in the development of the Target Normal Cost since no expenses are assumed to be paid from the Plan’s assets.

Actuarial Assumptions and Methods for Funding Purposes (continued)

Mortality:

Pre-retirement: None assumed. The Plan has fewer than 100 participants not in pay, and the actuary believes pre-retirement mortality is not material to the determination of the Funding Target or the Target Normal Cost.

Post-retirement: IRS 2024 Small Plan Combined Static Mortality Table using combined table for both annuitants and non-annuitants as prescribed by IRC Section 430. These tables include future mortality improvement of 8 years for males and 9 years for females with the following adjustments: For ages below 80, the projection period is increased by 1-year for each year below age 80. For ages above 80, the projection period is reduced (but not below zero) by $\frac{1}{3}$ year for each year above 80. This plan does not have a large enough population to vary from the standard tables. (*Previously, the 2023 Combined Static Mortality Table*).

Retirement Rates: The later of Age 65 or the beginning of next plan year. This is a common assumption for professional firm cash balance plans.

Termination Rates: No termination rates have been assumed in the valuation. Being a newly adopted plan there is no experience for this sponsor. The actuary has determined that turnover rates are not material to the determination of the Plan's liability.

Marital Status: Marital status is not applicable in the valuation due to death benefit being 100% of the vested accrued benefit and the assumed form of payment being a lump sum.

Maximum Benefit: \$275,000 for 2024. No future increases in the IRC Section 415 limit have been reflected.

Maximum Salary: \$345,000 for 2024. No future increases in the salary limit have been reflected.

Form of Payment: It has been assumed benefits will be paid in an immediate lump sum. This is a common assumption for professional firm cash balance plans. To the extent optional forms of payment are elected and conversions are determined on an actuarial basis, which differs from the basis funded in the valuation, gains or losses will occur. These gains or losses will be recognized through the routine application of the actuarial cost method.

Actuarial Assumptions and Methods for Funding Purposes (continued)

Actuarial Value of Plan Assets: The actuarial value of assets is equal to the market value of assets (including discounted employer contributions receivable) on the valuation date.

Shortfall Amortization Charge for ERISA Funding Purposes: Per IRC Section 430(c), the shortfall amortization charge for any plan year is the aggregate total (not less than zero) of the shortfall amortization installments for such plan year with respect to any shortfall amortization base which has not been fully amortized. The shortfall amortization installments are the amounts necessary to amortize the shortfall amortization base of the plan for any plan year in level annual installments over the 15-year period beginning with such plan year.

Actuarial Cost Method: The unit credit cost method is used for ERISA funding target purposes. Under this method, accrued pension benefits are determined for all eligible active participants. These benefits reflect service, salary and negotiated benefit increases to date. The liability is then equal to the Present Value of All Benefits (PVAB) for inactive participants plus the PVAB for active participants.

The normal cost is determined on an individual basis for all active participants who have not attained the assumed retirement age and is equal to the present value of the difference between the current accrued benefit and the anticipated accrued benefit one year later, with the accrued benefit based upon earnings, or negotiated benefit increases, to date in both cases. The total normal cost is based upon the sum of the individual normal costs. The target normal cost for funding is equal to the total normal cost plus assumed administrative expenses expected to be paid from the trust.

The projected unit credit method is used for IRS maximum deductible limit cushion amount. Under this method, accrued pension benefits are determined for all eligible active participants reflecting service to date and anticipated salary and negotiated benefit increases to the assumed retirement age. This liability for active participants is then added to the present value of all benefits for inactive participants to determine the total liability under this method.

The normal cost is determined on an individual basis for all active participants who have not attained the assumed retirement age and is equal to the present value of the difference between the current accrued benefit and the anticipated accrued benefit one year later, with the accrued benefit based upon earnings and negotiated benefit increases projected to assumed retirement age in both cases. The total normal cost is based upon the sum of the individual normal costs.

Disclosure of Reliance on Models

ProVal valuation software was used to develop the liabilities, financial results, and contribution calculations for the plan year. ProVal, developed by Winklevoss Technologies, has been reviewed by experts at Fidelity Workplace Investing, LLC and deemed appropriate to use for this purpose. Participant data, assumptions, methods, and plan provisions for this Plan were entered and programmed into ProVal and reviewed for completeness.

Actuarial Equivalence: Applicable Mortality based on IRC 417(e) and a rate equal to the annual 10-year Treasury rate for the month of November preceding the plan year (but no higher than 4.00%).

Hypothetical Account: The hypothetical bookkeeping account maintained on behalf of a Participant to track the notional Pension Credits and associated Interest Credits.

Interest Credit: Interest credits are credited at the end of each day beginning on or after January 1, 2023. The amount is determined by multiplying the Hypothetical Account balance as of the beginning of the day by the Interest Crediting Rate.

Interest Crediting Rate: The actual rate of return on the aggregate assets of the Plan each day, including both positive and negative returns.

Normal Retirement Date: The first of the month coincident with or next following attainment of age 65.

Plan Provisions (continued)

Pension Credits: At the end of each Plan Year, a full Pension Credit shall be credited to a Participant’s Hypothetical Account for any employee who has been credited with at least 2,000 Hours of Service. A partial Pension Credit shall be credited to a Participant’s Hypothetical Account for any Participant who has been credited with at least 1,000 Hours of Service. The partial Pension Credit shall be prorated based on the number of hours of service over 2,000 (not in excess of 1). No Pension Credit shall be credited to a Participant with fewer than 1,000 Hours of Service.

Pension Credits are determined from the following table based on a Participant’s Rate Group. Rate Groups are identified in Addendum A of the plan document.

Rate Group	Applicable Annual Pension Credit
Partner Group 1	\$10,000
Partner Group 2	\$15,000
Partner Group 3	\$20,000
Partner Group 4	\$25,000
Partner Group 5	\$30,000
Partner Group 6	\$40,000
Partner Group 7	\$50,000
Partner Group 8	\$60,000
