SUMMARY OF ACTUARIAL METHODS AND ASSUMPTIONS

COST METHOD

In accordance with PPA, the annual cost is equal to the target normal cost plus the shortfall amortization charge minus any prefunding and carryover balances.

Unit Credit method. The normal cost is the sum of the individual normal costs for active participants. The normal cost for an individual is the present value, as of the valuation date, of the participant's retirement, death, and withdrawal benefits which he is expected to accrue during the current plan year.

The actuarial accrued liability is the sum of the individual present values, for all participants, of the benefits accrued, based on service to the valuation date.

The actuarial liabilities shown in this report are determined using software purchased from an outside vendor which was developed for this purpose. Certain information is entered into this model in order to generate the liabilities specific to your pension plan. These inputs include economic and non-economic assumptions, plan provisions and census information. We rely on the coding within the software to value the liabilities using the actuarial methods and assumptions selected. Both the input to and the output from the model is checked for accuracy and reviewed for reasonableness.

ACTUARIAL ASSUMPTIONS

Interest Rates

Without Adjusted Interest Rates under Funding Relief:

Liabilities are valued using the three segment rates based on the 24-month average of the corporate bond yield curve published by the Secretary of the Treasury for the applicable month of January 2024.

With Adjusted Interest Rates under Funding Relief:

The interest rates are the adjusted 24-month segment rates using 25-year average segment rate corridors of 95% to 105% per Funding Relief.

PBGC Premiums and LDRM:

The Plan Sponsor is using the Standard Method to determine the Variable Rate Premium.

	Without Adjusted Interest Rates	With Adjusted Interest Rates	PBGC Premiums & LDRM

RATIONALE FOR ASSUMPTIONS

1. Prescribed Assumptions: The Interest Rates and Mortality Assumptions are prescribed by the IRS and/or Plan Sponsor elections.
2. The Expected Return on Plan Assets reflects the anticipated gross long-term rate of return on plan assets based on the plan's current and expected future asset portfolio, as supported by the plan's investment manager.

ASSET VALUATION

The actuarial value of plan assets is developed as the 3-year average of the plan assets based on the market value of assets as of the valuation date and the "adjusted value" of market assets for each of the two immediately preceding valuation dates. The adjusted value of assets at each preceding valuation date is equal to the market value of assets on such valuation date plus the net cash flow amount (including expected earnings on investments) for each following year up to the current valuation date. In this way, one third of the investment gain or loss over the preceding twelve months is recognized in plan assets immediately, and the other two thirds is deferred. Valuation assets are further limited to a 10% corridor around market value.
