Appendix B: Summary of Actuarial Assumptions and Methods

A. Funding

Certain assumptions are prescribed as noted below. The other assumptions are estimates derived from historical and recent experience as well as market observations, combined with professional judgment about future expectations.

Interest for IRS funding purposes

The interest rates used for the 2024 plan year are the 24-month average corporate bond segment rates for January 2024 subject to funding stabilization. Under stabilization, the interest rates used for funding purposes are calculated in the usual manner (24-month average corporate bond rates) but are then constrained to be within a corridor around a 25-year average of those same bond rates. Each of the three segments of the yield curve reflecting the 25-year average rates is constrained to be no less than 5%. For 2024, the stabilization corridor is 5%. It will remain at 5% through 2030 and then increase by 5% per year beginning in 2031 until it reaches 30% for 2035. The interest rate description above reflects that the plan sponsor elected to apply the ARPA provisions beginning with the 2021 plan year. The rates are as follows:

Assumption	Payments in the First 5 Years	Payments in Years 6 – 20	Payments Thereafter	Effective Interest Rate
Current Year, reflecting stabilization	4.75%	4.96%	5.59%	5.17%
Current Year, without stabilization	4.37%	4.96%	4.95%	4.92%
Prior Year, reflecting stabilization	4.75%	5.00%	5.74%	5.24%
Prior Year, without stabilization	2.13%	3.62%	3.93%	3.67%

Appendix B: Summary of Actuarial Assumptions and Methods

Interest for PBGC premium purposes

Under the Standard Method, the interest rates used to determine the PBGC variable-rate premium for the 2024 plan year are the average corporate bond segment rates for December, as follows:

Year	Method	Payments in the First 5 Years	Payments in Years 6 – 20	Payments Thereafter
Current Year	Standard	5.01%	5.13%	5.15%
Prior Year	Standard	4.84%	5.15 %	4.85%

These interest rates are based on the plan sponsor's election to change methods starting with the 2023 plan year (the next election to change methods may not be before the 2028 plan year and is subject to the constraints established by law).

Mortality Rates

Pri-2012 separate employee and annuitant healthy mortality tables (sex-specific), reflecting both blue and white collar data, projected generationally using the Adjusted MP-2021 scale.

This assumption is one of the choices allowed by the regulations. This reflects an update to the mandated mortality projection assumption.

Salary Increases

4.00%.

This assumption is based on historical and current data, adjusted to reflect estimated future experience and professional judgment.

Benefit Election

Single life annuity with 3 years of payments guaranteed for unmarried participants. 50% joint and survivor option with 3 years of payments guaranteed for married participants.

This assumption is based on historical and current data, adjusted to reflect estimated future experience and professional judgment.

Age 55 for those employees who complete 35 years of service by that age; age 58 for those employees who complete 33 years of service by that age; age 60 for those employees who complete 30 years of service by that age; otherwise age 65.

This assumption is based on historical and current data, adjusted to reflect estimated future experience and professional judgment.

Definition of Active Participants

Actively employed at the end of the year.

Description of Weighted Average Retirement Age

Age 65, determined as follows: The overall weighted average retirement age is the average of the individual weighted average retirement ages, assuming no other decrements, based on all the active participants included in the January 1, 2024 actuarial valuation.

Retirement From Inactive Status

If worked after May 19, 1995, age when age plus service sum to 80 (at termination or on August 31, 2010 if later), but not earlier than age 60, or age 65 if earlier or if did not work after May 19, 1995.

Appendix B: Summary of Actuarial Assumptions and Methods

Percent Married

85%. Spouse is assumed to be the opposite gender.

Age Difference

Male spouses are assumed to be three years older than female spouses, if actual age is unknown.

Administrative Expenses

An expense assumption is required under the funding rules. Plan-related expenses of \$75,000 are expected to be paid by the plan during the year.

This assumption is based on recent historical data, adjusted to reflect PBGC premium changes, estimated future experience and professional judgment.

Asset Method

As selected by the plan sponsor, assets are determined by averaging the market value as of the valuation date and the adjusted market values as of the preceding two years. The resulting value is limited to between 90% to 110% of market value of assets. The adjusted market values reflect cash flow and expected earnings to the valuation date. The expected earnings are based on an assumed rate of return of 4.75% for 2022 and 2023.

A characteristic of this asset method is that, over time, it is more likely to produce an actuarial value of assets less than the market value of assets, if the applicable limitation is less than the assumed rate of return.

Funding Method and Contribution Requirement

Funding method is unit credit actuarial cost method, as prescribed by law. The liability is measured on an accrual-to-date basis using mandated mortality tables and interest rates with no salary projection past the end of the year. For the plan's funding policy cost, the method is projected unit credit, in which liabilities are based on salaries projected to retirement. This method results in a relatively level cost each year.

Plan sponsors are required under Internal Revenue Code Section 430 to make a minimum level of contributions to qualified pension plans. Available credit balances can be used to satisfy this required contribution. In general, the minimum required contribution is the sum of the target normal cost and an installment that amortizes the plan's funding shortfall, offset by any plan overfunding, if applicable. If all assumptions are met (including the investment earnings implicitly assumed by the interest rate), funding the plan at the minimum required

Appendix B: Summary of Actuarial Assumptions and Methods

contribution level is generally designed to achieve a 100% funded status within fifteen years. Once that is achieved, or for overfunded plans, the minimum required contribution will generally equal the target normal cost reduced by any overfunding.

Actuarial Models

Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprising both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuary.

Statement by Enrolled Actuary

To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.
