• All participants	Section 430(h)(3) prescribed generational annuitant and non-annuitant mortality tables for 2024 plan year funding valuations, in accordance with IRS regulation 1.430(h)(3)-1. These tables are based on the base mortality rates from Pri-2012 mortality tables projected with mortality improvement based on the IRS methodology and modified projection scale MP-2021.		
Other economic assumptions			
• Salary increases	3.50% per year— the salary increase assumption has historically been used for the Plan and has not produced significant gains or losses.		
• Social Security wage base	3.00% per year— the Social Security wage base assumption is based on the relationship to the salary increase and inflation assumptions.		
• Inflation	2.25% per year— the inflation assumption is based on the inflation assumption periodically published by Mercer Investment Consulting in their Capital Market Outlook.		
• Expenses	\$55,000 added to current year normal cost – based on prior year expenses

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods

Actuarial methods for funding

Asset methods

The asset valuation method is the fair market value.

Participant methods

Participants or former participants are included or excluded from the valuation as described below:

- **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date. For this purpose, participants with a break-in-service on the valuation date are treated as terminated participants. The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.
- **Disabled Participants:** The liabilities for participants on long-term disability have been included with the liabilities for terminated vested participants.
- **Insurance contracts:** The plan does not have any insurance contracts.
- **Compensation history:** We have used and relied upon compensation history provided by the plan sponsor.

Minimum funding methods

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- This plan provides benefits that are not a function of a participant's accrued benefit or years of service. This benefit is allocated to funding target based on the ratio of the participant's service at the beginning of the plan year to their service at each decrement age and is allocated to target normal cost based on the proportionate benefit attributable to the increase in the participant's service and compensation during the plan year.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan. The plan's valuation date is the beginning of the plan year.

Mortality sponsor elections			
• All participants	Section 430(h)(3) prescribed generational annuitant and non-annuitant mortality tables for 2024 plan year funding valuations, in accordance with IRS regulation 1.430(h)(3)-1. These tables are based on the base mortality rates from Pri-2012 mortality tables projected with mortality improvement based on the IRS methodology and modified projection scale MP-2021.		
Other economic assumptions			
• Salary increases	3.50% per year— the salary increase assumption has historically been used for the Plan and has not produced significant gains or losses.		
• Social Security wage base	3.00% per year— the Social Security wage base assumption is based on the relationship to the salary increase and inflation assumptions.		
• Inflation	2.25% per year— the inflation assumption is based on the inflation assumption periodically published by Mercer Investment Consulting in their Capital Market Outlook.		
• Expenses	\$55,000 added to current year normal cost – based on prior year expenses

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods**Actuarial methods for funding****Asset methods**

The asset valuation method is the fair market value.

Participant methods

Participants or former participants are included or excluded from the valuation as described below:

- **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date. For this purpose, participants with a break-in-service on the valuation date are treated as terminated participants. The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.
- **Disabled Participants:** The liabilities for participants on long-term disability have been included with the liabilities for terminated vested participants.
- **Insurance contracts:** The plan does not have any insurance contracts.
- **Compensation history:** We have used and relied upon compensation history provided by the plan sponsor.

Minimum funding methods

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- This plan provides benefits that are not a function of a participant's accrued benefit or years of service. This benefit is allocated to funding target based on the ratio of the participant's service at the beginning of the plan year to their service at each decrement age and is allocated to target normal cost based on the proportionate benefit attributable to the increase in the participant's service and compensation during the plan year.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan. The plan's valuation date is the beginning of the plan year.

Schedule SB, line 32 — Schedule of Amortization Bases

The total shortfall amortization charge is the sum of the individual shortfall amortization installment for each plan year covered under PPA. Although an individual shortfall amortization installment can be negative, the combined shortfall amortization charge cannot be less than \$0.

Shortfall bases					
Year established		Outstanding balance	Years remaining		2023 Installment
2023	\$	1,170,952	14	\$	111,759
2024		(515,611)	15		(46,911)
Total	\$	655,341		\$	64,848

Schedule SB, line 24 — Change in Actuarial Assumptions

The expense assumption was changed from \$60,000 to \$55,000 to reflect our expectations for the current plan year.
