Description of Actuarial Methods

Asset Valuation Method

Plan Assets equal the Market Value of assets. This was first used for the 2006 valuation.

Actuarial Cost Method

Funding Target Liability: Unit Credit Actuarial Cost Method.

Maximum Liability: Projected Unit Credit Actuarial Cost Method. The allocation of projected benefits between past years and future years is in proportion to the applicable rates of benefit accrual under the Plan.

Description of Actuarial Assumptions

Changes in Actuarial Assumptions as of January 1, 2024

The valuation reflects changes in the actuarial assumptions listed below. (The assumptions used before and after these changes are more fully described in the next section.)

- Mortality

With the exception of the valuation interest rate, the assumptions indicated were changed to represent the Enrolled Actuary's current best estimate of anticipated experience of the Plan.

Interest Rates

The American Rescue Plan Act of 2021 (ARPA) was signed into law on March 11, 2021. ARPA continues to use a 24-month bond averaging period methodology for determining the segmented interest rates used in the calculation of the Plan's target liability and a corridor based on a 25-year bond averaging period. However, now the corridor based on 25-year average segment rates and the applicable minimum and maximum percentages used for purposes of calculating the Plan's target liability to adjust the 24-month average segment rates has been extended. In addition, any 25-year average segment rate that is less than 5% is deemed to be 5%.

The Infrastructure Investment and Jobs Act was signed into law on November 15, 2021 that further extended funding stabilization. The corridors under the new laws are as follows:

<u>Corridor After ARPA</u>			
<u>Years</u>	<u>Corridor</u>	<u>Years</u>	<u>Corridor</u>
2020-2021	95% to 105% if not deferred	2020-2021	95% to 105% if not deferred
2022-2025	95%-105%	2022-2030	95%-105%
2026	90%-110%	2031	90%-110%
2027	85%-115%	2032	85%-115%
2028	80%-120%	2033	80%-120%
2029	75%-125%	2034	75%-125%
2030+	70%-130%	2035+	70%-130%

The corridor rates are used for purposes of the calculation of the Plan's minimum required contribution and the determination of the Plan's AFTAP certification, but cannot be reflected in the calculation of the Plan's maximum tax deductible contribution or the PBGC variable premium liability. This report reflects the rates under ARPA as allowed under current legislation.

Valuation: Segment rates for the 4th month preceding the Valuation Date (i.e., September). The rates are shown below.

Segment	2024		2023	
	Before Adjustment	After Adjustment	Before Adjustment	After Adjustment
1st	3.62%	4.75%	1.41%	4.75%
2nd	4.46%	4.87%	3.09%	5.00%
3rd	4.52%	5.59%	3.58%	5.74%

Interest Rates (cont.)

The rates before adjustment are the standard 24-month segment rates determined under any prior interest rate relief laws. They are used in the determination of the Plan's maximum tax deductible contribution.

The rates after adjustment reflect the application of the applicable corridor around the 25-year average rates. They are used in the determination of the Plan's minimum required contribution and AFTAP for benefit restriction purposes.

PBGC premium: Valuation basis, before adjustment, last elected for the 2010 plan year.

Mortality

Pri-2012 Mortality Table projected to valuation date with an adjusted version of Scale MP-2021. Combined tables for annuitants and non-annuitants.

(Prior: RP-2014 Adjusted to 2006 Total Dataset Mortality Table projected to valuation date with Scale MP-2021. Combined tables for annuitants and non-annuitants.)

Mortality Improvement

Projected using an adjusted version of Scale MP-2021 for 8 years for males, and 9 years for females, after the valuation date.

Projection period is modified based upon participant's age on valuation date.

The mortality assumption above and the lump sum mortality assumption described below was updated to the latest approved tables. The changes in assumption decreased liabilities by about 0.7%.

Lump sum basis

Mortality: IRS 2024 Applicable Mortality Table for 417(e) dynamic.

(Prior Mortality: IRS 2023 Applicable Mortality Table for 417(e) dynamic.)

Interest Rates: Valuation Basis.

Inflation

2.40%.

This assumption is consistent with the Social Security Administration's current best estimate of the ultimate long-term (75-year horizon) annual percentage increase in CPI, as published in the 2024 OASDI Trustees Report.

Increases in IRC Sec. 401(a)(17) compensation limit

As required by law, no increases are assumed.

Increases in IRC Sec. 415(b) limit on benefits

As required by law, no increases are assumed.

Retirement

100% at greatest of attained age plus one or age 62 with 10 years of service.

The actuarial assumption in regards to rates of retirement shown above is based on plan features such as eligibility for full and early retirement where applicable and input from the plan sponsor. The plan does not have sufficiently credible data on which to perform an experience study.

Termination prior to retirement

None assumed.

Disability

None assumed.

Form of payment election

100% of active and terminated vested are assumed to elect a lump sum.

This assumption is based on actual experience since plan inception.

Administrative expenses

No provision was made for administrative expenses since they are not paid out of the trust.

Percent of active employees married

85% of males and 85% of females.

Spouse's age

Husbands are assumed to be 3 years older than wives.

Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.
