ACTUARIAL ASSUMPTIONS AND METHODS

The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

Actuarial Cost Methods

Funding Target Liability: As required by PPA, the Traditional Unit Credit Cost Method is used.

Actuarial Value of Assets: Market Value, as provided by the Trustee.

Funding Target Liability

Valuation Date: January 1, 2024

Demographic Information: The demographic information was provided as of January 1, 2024 by Hackensack Radiology Group, P.A. Although we did not audit the data, we did review the data for reasonableness.

Actuarial Valuation Software: For purposes of developing the projected future benefit payments as well as determining attributed liabilities and normal costs as of the valuation date, we utilized the ASC software platform developed by Actuarial Systems Corporation. We believe this externally developed valuation system is appropriate, was used for its intended purpose, and did not produce unreasonable results.

Interest Rates for Minimum Required Contribution: The adjusted 24-month average January 2024 funding segment rates using 25-year average segment rate corridors were utilized as prescribed by IRC Section 430(h), after reflection of interest rate stabilization provisions included in various legislation.

Segment	Interest Rate
Segment 1	4.75%
Segment 2	4.96%
Segment 3	5.59%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

Effective Interest Rate: 5.01%

Interest Rates for Maximum Alternative Contribution: The January 2024 funding segment rates were utilized as prescribed by IRC Section 430(h), and elected by Hackensack Radiology Group, P.A. without reflection of the interest rate stabilization provisions included in various legislation. These rates were utilized to determine the LDROM calculations.

Segment	Interest Rate
Segment 1	4.37%
Segment 2	4.96%
Segment 3	4.95%

Projected Cash Balance Interest Crediting Rate: 4.00%

Rate of Compensation Increase: Salaries are assumed to increase at 3.00% per year.

ACTUARIAL ASSUMPTIONS AND METHODS

Retirement Rates: Employees were assumed to retire at normal retirement age (age 65). Employees past normal retirement age were assumed to retire at the end of the current plan year.

Mortality for Healthy Lives: The base mortality tables are the blended sex distinct Pri-2012 mortality tables. The base mortality table is adjusted as described in Internal Revenue Regulation 1.430(h)(3)-1(c)(2) by projecting mortality improvements using the 2024 Adjusted Scale MP-2021 Rates from the year 2012 through 2024, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

Termination: Termination rates were assumed in the valuation, based on the SOA 2003 turnover study small plan age table for 1,000 lives or less. The assumption utilized was selected based on the most recent available experience study released by the Society of Actuaries. Illustrative rates are presented in the following table:

Age	Rate
20	0.243
25	0.195
30	0.155
35	0.121
40	0.094
45	0.073
50	0.056
55	0.042

Disability: Rates of disability were not assumed in the valuation.

Administrative Expenses: Actual plan expenses, not including investment advisory fees, paid out of the trust during the previous plan year, rounded to the nearest thousand dollars - \$0.

Percent Married: 100% of males and 100% of females were assumed to be married. This assumption is based on the provisions of the Plan and Hackensack Radiology Group P.A.'s expectation.

Age of Spouse: The female spouse is assumed to be 3 years younger than the male spouse. This assumption is based on national averages.

Form of Benefit: 100% of active participants are assumed to receive a deferred lump sum distribution at their assumed retirement age. 100% of terminated vested participants are assumed to receive an immediate lump sum distribution.

Statement by Enrolled Actuary
 To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.
