Schedule SB, Part V: statement of actuarial assumptions and methods

Plan name: The Pension Plan of Prevention of Blindness Society of Metropolitan Washington, Inc. **EIN:** 37-0661504
Plan sponsor: Prevention of Blindness Society of Metropolitan Washington, Inc. **PN:** 001

Actuarial cost method

Funding target and target normal cost

An actuarial cost method allocates the expected cost of a pension plan on a year-by-year basis. The primary objective is to accumulate enough assets prior to each participant's retirement to provide the promised pension benefits.

The Pension Protection Act of 2006 (PPA) requires plan sponsors to use the Traditional Unit Credit actuarial cost method in which the estimated accrued benefit is based on service and, if applicable, earnings as of the valuation date. The funding target is equal to the actuarial present value of all accrued benefits as of the valuation date. The target normal cost is the actuarial present value, as of the valuation date, of the expected increases in projected accrued benefits attributable to service expected to be completed during the plan year (i.e., if applicable, one year's salary growth is reflected in the determination of target normal cost).

For tax deduction purposes, the funding target may reflect the value of future pay increases on accrued benefits, if applicable.

PPA discounting method

The plan sponsor must choose between full yield curve spot rates or a segmented yield curve of 24-month average corporate bond rates. If the segmented yield curve is selected, the plan sponsor can use either the rates as of the month of the valuation or as of a lookback month, up to 4 months prior to the valuation date. If the full yield curve is selected, the rates as of the month of valuation must be used.

For purposes of this valuation, the following discounting method was used and is assumed to be approved by the plan sponsor:

Segment rates through the month of August preceding the valuation date, adjusted so each segment rate is no less than the applicable minimum percentage* of the corresponding 25-year average segment rate for the calendar year that contains the first day of the plan year and no more than the applicable maximum percentage of that 25-year average segment rate. The 25-year average cannot be less than 5.0% prior to application of the corridor.**

Asset valuation method

Plan assets for purposes of this actuarial valuation are valued under the Asset Averaging method, including, if applicable, discounted receivable contributions. The value is equal to the average of the fair market value of assets on the valuation date and the adjusted fair market value (including expected earnings) for the two earlier annual determination dates. Expected earnings are calculated using a rate no greater than the third segment rate of the segmented yield-curve in effect at the beginning of each valuation year. The resulting average value must be fall between 90 and 110 percent of the fair market value of assets on the valuation date.

* Minimum is 95% through 2030, decreasing 5% per year beginning in 2031 until 70% is reached in 2035

** Maximum is 105% through 2030 and increasing 5% per year beginning in 2031 until 130% is reached in 2035

Actuarial assumptions

Miscellaneous Assumptions

Form of Payment:	Life Annuity
Expenses:	Assumed equal to prior year's actual expenses
Percent Married:	80.00%
Spouse's Age:	Wives assumed to be 3 years younger than husbands

Rationale for significant assumptions

Economic assumptions

- **Expected return on plan assets:** The assumption was selected by the client with input from their investment advisor. We believe the assumption is reasonable as it falls within a reasonable range of expected returns for the plan's asset allocation based on capital market assumptions.
- **ASC 960 pre-retirement discount rate:** This assumption is based on the **expected return on plan assets** assumption.
- **ASC 960 post-retirement discount rate:** This assumption is based on the **expected return on plan assets** assumption.
- **Salary increase:** This assumption is based on the plan sponsor's long-term expectation of salary increases. We believe that this is representative of anticipated future experience. In addition, based on discussions with the plan sponsor, significant changes in future salary growth or compensation practices are not expected.

Actuarial assumptions

Demographic Assumptions

- **ASC 960 mortality:** The mortality base table and projection scale is based on the most recent mortality table and improvement scale published by the Society of Actuaries (SOA) and in our judgement, adequately reflects expected mortality rates as of the measurement date. The SOA elected not to release a new mortality scale for 2023 which would have included mortality data affected by the COVID-19 pandemic, but instead will continue to study emerging mortality experience and assess what mortality improvement scale options might be considered to be implemented in the future. As such, we have decided not to reflect any adjustments to the most recent mortality improvement scale. The plan's relatively small size would not support a credible mortality study.
- **Termination:** We believe that this assumption is representative of anticipated future experience. Historically, this assumption has not produced significant gains or losses for the plan. In addition, based on discussions with the plan sponsor, significant changes in termination patterns are not expected.
- **Retirement:** We believe that this assumption is representative of anticipated future experience. Historically, this assumption has not produced significant gains or losses for the plan. In addition, based on discussions with the plan sponsor, significant changes in retirement patterns are not expected.

Miscellaneous assumptions

- **Expenses:** The assumption is based on the expectation of expenses to be paid out during the plan year assuming expenses will be similar to the prior year.
- **Form of payment:** We believe that this assumption is representative of anticipated future experience. Historically, this assumption has not produced significant gains or losses for the plan.
- **Spouse's age and percent married:** The employer does not have enough credible data to analyze spousal demographics. These assumptions are based on the actuary's experience with similar plans.
