**Texas Hospital Association
Defined Benefit Retirement Plan
EIN 74-1362741 PN: 002**

2024 Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

Actuarial Methods

1. Actuarial Funding Method

The Accrued Benefit actuarial funding method is used in developing the contribution requirements of the plan. The actuarial funding method is the procedure by which the actuary annually identifies a series of annual contributions which, along with current assets and future investment earnings, will fund the expected plan benefits. The normal cost for the plan is the sum of the individually determined normal cost for each active participant. Each active participant's normal cost is determined as the present value of benefits that the participant is expected to accrue during the year of valuation.

The plan's current accrued liability is the sum of the individually determined accrued liability for each active participant plus the present value of future benefits for all retirees and vested terminated participants. Each active participant's accrued liability is the present value of all benefits which have accrued as of the valuation date.

The unfunded accrued liability is the amount by which the accrued liability exceeds the current plan assets. The unfunded accrued liability is recalculated each time a valuation is performed and is amortized in level dollar annual contributions in accordance with IRS guidelines.

2. Plan Value of Assets

Assets are valued at the average fair market value as reported by the trustee as of the valuation date, including the present value¹ of any receivable contributions made for a prior plan year which were not recognized by the trustee as of the asset valuation date, and the adjusted fair market value of assets determined for the two preceding valuation dates. The adjusted fair market value of assets for a prior valuation date is the fair market value of assets on that date, increased for contributions included in the plan's asset balance on the current valuation date that were not included in the plan's asset balance on the prior valuation date increased by assumed investment return at a rate^{2,3} of 6.0%, and reduced for benefits and administrative expenses paid from plan assets during the same period. The average shall be adjusted as to not be in excess of 110% of market value nor to be less than 90% of market value.

¹ Present value is determined using the effective interest rate for the preceding plan year.

² WRERA precludes this rate from exceeding the 3rd segment rate. IRS Notice 2009-22 provides guidance on the determination of the 3rd segment rate due to (i) use of yield curve in lieu of segment rates and (ii) PPA transition issues.

³ This rate is an actuarial assumption and is not part of the actuarial funding method per Treasury Regulation 1.430(d)-1(f)(1)(iv).

Actuarial Assumptions

1. **Mortality:** The active and retired participants of the plan are expected to exhibit mortality in accordance with the following published mortality tables:

Optional Combined Static Tables for small plans under Regulation 1.430(h)(3)-1 in effect for 2024 plan years

No additional future mortality improvement has been assumed other than that used to develop the IRS prescribed mortality table identified above.

2. **Withdrawal:** The active participants are assumed to terminate their employment for causes other than death, disability or retirement in accordance with annual rates as illustrated below.

Attained Age	Terminations per 1,000 Participants
20	200
25	163
30	128
40	78
50	42
55 and above	0

3. **Interest Rates:**

	For purposes of:	
	Minimum Required Contribution under IRC §430 and IRC §436 reflecting Pension Funding Stabilization	Maximum Tax Deductible Contribution under IRC §404
1 st Segment Rate	4.75%	3.62%
2 nd Segment Rate	4.87%	4.46%
3 rd Segment Rate	5.59%	4.52%

The segment rates used in this valuation are consistent with the plan sponsor's election to:

- use the segment rates under IRC Section 430(h)(2)(C) for purposes of determining the Funding Target and Target Normal Cost; and
 - use September as the applicable month for the segment rates.
4. **Earnings Progression:** The increase in the levels of participant compensation is assumed to occur at an annual rate of 3.00% for 2024 and 5.75% thereafter. Rationale: This assumption is based on the employer's expectation of wage increases for the next 12 months and the enrolled actuary's best expectations for future plan experience thereafter. The experience study was completed in May 2023.

5. Retirement Age: A participant is assumed to retire in accordance with the annual rates as illustrated below:

Attained Age	Retirements per 1,000 Participants
55-58	20
59-61	30
62	200
63-64	100
65-69	400
70+	1,000

Rationale: Due to the limited availability of observable data, standard retirement rates used for smaller retirement plans were utilized. The actuary has observed a noticeable pattern of delayed retirements in the actual plan population.

6. Wage Base Increases: 2.50% per year.
7. Disability: Active participants are expected to become disabled as defined under the plan in accordance with annual rates as illustrated below:

Attained Age	Disabilities per 1,000 Participants
20	0.59
25	0.74
30	0.98
40	1.89
50	4.90
60	11.96

Rationale: Rates are based on the published table.

8. Expenses: Target Normal Cost is required to be loaded with plan-related expenses expected to be paid from plan assets during the year.

For a plan year, the plan-related expense load is determined as the sum of (a), (b) and (c) where:

- (a) actual plan-related expenses paid from the trust during the prior plan year
- (b) equals (i) - (ii) where:
 - (i) actual investment management fees paid from the trust during the last plan year multiplied by the ratio of the trust's market value as of the beginning of the current plan year to the trust's market value as of the beginning of the prior plan year.
 - (ii) actual investment management fees paid from the trust during the prior plan year.
- (c) equals (i) - (ii) where:
 - (i) the PBGC premium paid or to be paid from the trust for the current plan year (whether or not it is paid during the current plan year)
 - (ii) the PBGC premium paid from the trust during the prior plan year.

9. Recognition of IRC Sections 401(a)(17) and 415(b) Limitations: The limitations under IRC Sections 401(a)(17) and 415(b) have been reflected in the determination of plan costs.

10. Conversion of 401(k) Plan Balance to monthly amounts: Underlying corporate bond yield curve used for determination of funding target and target normal cost and “Applicable Mortality Table” as described in IRC § 417(e)(3).
11. 401(k) Plan Balance: The 401(k) Plan Balance as of December 31, 2007 used in determining benefits under the Defined Benefit Plan for valuation purposes is equal to the actual 401(k) Plan Balance multiplied by a ratio, the numerator of which is the actuarial value of assets and the denominator of which is the market value of assets. For participants over age 60, the ratio is phased out over 5 years, such that for a participant age 65 or over, the actual 401(k) Plan Balance is used in determining plan benefits.

Statement by Enrolled Actuary

To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

J. Plan Provisions for Compliance with Benefit Restrictions under IRC §436	<p><i>Limitations on Benefit Accruals:</i> Benefit accruals are frozen if Plan's AFTAP falls below 60%, as required by PPA. Benefit accruals are not restarted automatically when the Plan's AFTAP increases above 60%. Benefit accruals that otherwise would have been earned when the Plan's AFTAP was below 60% are not restored automatically when the Plan's AFTAP increases sufficiently unless benefit accruals were discontinued for less than 12 months.</p> <p><i>Shutdown or Other Unpredictable Contingent Event Benefits:</i> IRC Section 436(b) does not apply because the plan does not and shall not provide any: (a) special benefits in the event the employer shuts down a business segment ("shutdown benefits") or (b) other unpredictable contingent event benefits.</p> <p><i>Limitations on Prohibited Payments:</i> The election of certain payment forms that include a prohibited payment are prohibited when the Plan's AFTAP falls below 60%. The Plan does not allow special optional payment forms in this situation. The Plan restricts the availability of certain payment forms that include a prohibited payment when the Plan's AFTAP is between 60% and 80%. The Plan allows special optional payment forms in this situation.</p> <p><i>Limitations on Plan Amendments Increasing Benefit Liabilities:</i> The plan prevents certain Plan Amendments that would increase liabilities from taking effect if the Plan's AFTAP would be under 80% after the amendment unless additional funding is made in an amount equal to the lesser of: (i) the amount necessary to ensure the Plan's AFTAP is 80% after the amendment, or (ii) the amount of the increase in the Plan's Funding Target Liability due to the amendment (note that this option (ii) is not available if the Plan's AFTAP is presumed to be less than 60%).</p>												

K. Pre-retirement Death Benefits	Payment of benefit which is actuarially equivalent to present value of accrued normal retirement benefit for participant having reached 21; form of payment and beneficiary selected are subject to applicable surviving spouse consent requirements.
L. Basis of Actuarial Equivalence	<ul style="list-style-type: none"> i. Monthly benefits: 8.0% and UP 1984 Mortality Table (with a 3 year age setback for males and for females) ii. For converting 401(k) Plan (and former Money Purchase Plan) and theoretical account balances to single payment amounts: IRS issued segment rates and “applicable mortality table” as described in IRC § 417(e)(3) for determining single sum benefits in effect at the Annuity Starting Date
M. Integration Level	Equal to the Covered Compensation of the participant; Covered Compensation is the average of the Maximum OASDI Taxable Wage Base in the 35-year period ending with the year of the participant’s attainment of Social Security Normal Retirement Age.
N. Average Monthly Compensation	Averaged over highest 5 consecutive calendar years in last 10 years. Annual compensation for benefit accruals after December 31, 1993 and before January 1, 2002 is limited to \$150,000 for each year (as indexed periodically for cost of living). For years after December 31, 2001, annual compensation is limited to \$200,000 each year (as indexed periodically for cost of living).
O. Final Average Monthly Compensation	The average monthly compensation during the 3-consecutive year period ending with or within the plan year, but not to exceed the integration level. For this calculation, the compensation for a year may not exceed the taxable wage base for that year.
P. Service with APS	For purposes of determining plan eligibility and position on the vesting schedule (but not for benefit determination) certain employees who were formerly employed by APS are granted vesting service credits for periods of employment with APS.
