Post-Retirement: IRS 2024 Small Plan Combined Static Mortality Table (previously IRS 2023 Small Plan Combined Static Mortality Table).

Actuarial Assumptions and Methods for Funding Purposes (continued)

Turnover Rates: No termination rates have been assumed in the valuation. The actuary has determined that turnover rates are not material to the determination of the Plan's liability.

Retirement Rates: The actuary believes that the best expectation of future experience is 100% retirement at the earlier of Normal Retirement Age or age 60 with three years of service but not earlier than January 1, 2025. Gains or losses resulting from actual retirement experience will be recognized through the routine application of the actuarial cost method.

Form of Payment: It has been assumed benefits will be paid in a lump sum. To the extent optional forms of payment are elected and conversions are determined on an actuarial basis, which differs from the basis funded in the valuation, gains or losses will occur. These gains or losses will be recognized through the routine application of the actuarial cost method.

Marital Status: Marital status is not applicable in the valuation due to the death benefit being 100% of the vested accrued benefit and the assumed form of payment being a lump sum.

Actuarial Value of Plan Assets for Funding Purposes: The actuarial value of assets is equal to the market value of assets (including discounted employer contributions receivable) on the valuation date.

Maximum Benefit: \$275,000 for 2024. no future increases in the IRC Section 415 limit have been reflected.

Maximum Salary: \$345,000 for 2024. no future increases in the salary limit have been reflected.

Shortfall Amortization Charge for ERISA Funding Purposes: Per IRC Section 430(c), the shortfall amortization charge for any plan year is the aggregate total (not less than zero) of the shortfall amortization installments for such plan year with respect to any shortfall amortization base which has not been fully amortized. The shortfall amortization installments are the amounts necessary to amortize the shortfall amortization base of the plan for any plan year in level annual installments over the 15-year period beginning with such plan year.

Actuarial Assumptions and Methods for Funding Purposes (continued)

Actuarial Cost Method: The unit credit cost method is used for ERISA Funding Target (FT) purposes. Under this method, accrued pension benefits are determined for all eligible active participants. These benefits reflect service, salary and negotiated benefit increases to date. The liability is then equal to the present value of all benefits for inactive participants plus the PVAB for active participants.

The normal cost is determined on an individual basis for all active participants who have not attained the assumed retirement age and is equal to the present value of the difference between the current accrued benefit and the anticipated accrued benefit one year later, with the accrued benefit based upon earnings, or negotiated benefit increases to date in both cases. The total normal cost is based upon the sum of the individual normal costs. The target normal cost for funding is equal to the total normal cost plus assumed administrative expenses expected to be paid from the trust.

The projected unit credit method is used for IRS maximum deductible limit cushion amount. Under this method, accrued pension benefits are determined for all eligible active participants reflecting service to date and anticipated salary and negotiated benefit increases to the assumed retirement age. This liability for active participants is then added to the present value of all benefits for inactive participants to determine the total liability under this method.

The normal cost is determined on an individual basis for all active participants who have not attained the assumed retirement age and is equal to the present value of the difference between the current accrued benefit and the anticipated accrued benefit one year later, with the accrued benefit based upon earnings and negotiated benefit increases projected to assumed retirement age in both cases. The total normal cost is based upon the sum of the individual normal costs.
