Appendix B (Continued)

|---|---|
| Asset Method | Funding: Market Value of Assets plus interest adjusted accrued but unpaid contributions as of the valuation date plus an adjustment to defer full recognition of investment losses and gains over a two-year period. The investment (gain)/loss for every year equals the market value at the beginning of the year projected to the end of the year using the interest rate above, but no greater than the third segment rate for the plan year, minus the end of the year actual market value. The actuarial value of assets will be no less than 90% and no more than 110% of the market value (including interest-adjusted accrued but unpaid contributions). |
| Funding Method | Pure Unit Credit The actuarial liabilities shown in this report are determined using software purchased from an outside vendor which was developed for this purpose. Certain information is entered into this model in order to generate the liabilities. These inputs include economic and non-economic assumptions, plan provisions, and census information. We rely on the coding within the software to value the liabilities using the actuarial methods and assumptions selected. Both the input to and the output from the model is checked for accuracy and reviewed for reasonableness. |
| Employees Valued | Only participants as of the valuation date were valued. |
| Changes in Assumptions and Methods since the Last Actuarial Valuation | The interest rates used for determining the funding target were 4.75%, 5.00% and 5.74%. These rates were updated to the rates required for the current plan year. The mortality table for the funding target was changed as required under PPA '06. |
| Justification for Changes in Actuarial Assumptions | The only assumption changes were to prescribed actuarial assumptions or as a result of At-Risk status. Therefore, the plan did not need IRS approval to change assumptions and there is no need to disclose any "Change in Actuarial Assumptions." |
