Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

Plan Name: Laner Muchin LTD Employees' Pension Plan

EIN 36-3088463 / PN 003

Summary of Actuarial Methods

The actuarial cost method is a particular technique used by the actuary for establishing the amount and incidence of annual actuarial costs. The actuarial cost method determines the portion of the ultimate cost of a pension plan that should be allocated to each year (known as the normal cost). The cost method is thus a budgeting tool that helps to ensure that the pension plan will be adequately and systematically funded.

The annual cost for a pension plan is determined using the unit credit cost method. The ultimate cost for a pension plan will be determined not by the cost method but by the benefits and expenses which become payable and the earnings which are obtained on the investments of the Plan. In addition, the choice of actuarial assumptions will affect the current level of contributions and pattern of future contributions.

Under the unit credit cost method, the target normal cost for each participant is equal to the present value of the projected benefit (salary increases may be included) one year from the valuation date minus the present value of accrued benefits as of the valuation date. The target normal cost for the Plan is the total of the individually computed target normal costs for all participants including the costs for any death or disability benefits under the Plan.

The target liability at any point in time for an active participant is the present value of the participant's accrued benefit. For persons receiving benefits or entitled to a deferred vested retirement income, the target liability is equal to the present value of their future benefit payments. The total target liability for the Plan is the total of the individually computed target liability amounts for all participants.

Certain assumptions are made in the calculation of the target liability, such as: interest rates, mortality, turnover, etc. which are assumed to hold for many years into the future. Since actual experience may differ somewhat from the assumptions, the costs determined by the valuation must be regarded as estimates of the true costs of the Plan.

Asset Valuation Method

The actuarial value of assets equals the fair market value of assets.

Changes in Actuarial Methods Since Prior Valuation

None.

Schedule SB, Part V – Summary of Plan Provisions
Plan Name: Laner Muchin LTD Employees' Pension Plan
EIN 36-3088463 / PN 003

Summary of Principal Plan Provisions

This summary of plan provisions is intended to only describe the essential features of the Plan. All eligibility requirements and benefit amounts shall be determined in strict accordance with the plan document itself.

Accrued benefit

Non-equity Partners:

2% of average monthly compensation multiplied by years of benefit service as of the normal retirement date (maximum of 10 years) and offset by 87.5% of the participant's account balance in the money purchase pension plan projected to normal retirement age at 8.5% and converted to a monthly life annuity based on the actuarial equivalence definition stated below. The net is multiplied by a fraction, not to exceed one, of service to date (maximum of 30 years) divided by service projected to normal retirement date (maximum of 30 years). The minimum benefit is the accrued benefit under the plan as of December 31, 1995.

Equity Partners:

The sum of (A) the greater of (1) the participant's accrued benefit as of December 31, 1995, converted to a life annuity, and (2) 2% of average monthly compensation for the year ending before becoming equity partner multiplied by years of service before becoming an equity partner (maximum of ten years), and (B) the sum of the average monthly compensations multiplied by the applicable percentage (attached) for each plan year on or after becoming an equity partner. The sum of (A) and (B) is offset by 87.5% of the participant's account balance in the money purchase plan projected to normal retirement age and converted to a monthly life annuity based on the actuarial equivalence definition stated below. The benefit may not be less than the December 31, 1995, accrued benefit.

Actuarial equivalent

Actuarial equivalent means a form of benefit differing in time, period and/or manner of payment from another form of benefit but having the same value when computed based upon the following interest and mortality assumptions:

Interest: 6% per annum, compounded annually

Mortality:

Pre-retirement: None

Post-retirement: 1994 Group Annuity Mortality Reserving Table unisex

The present value of any accrued benefit for purposes of determining the amount of a lump sum distribution will be equal to the greater of the present value determined using the interest rate and mortality assumption specified above or the present value determined using the "applicable interest rate" and the "applicable mortality table".

The applicable interest rate structure is the short-term segment, mid-term segment and long-term segment rates for the calendar month proceeding the first day of the plan year in which the distribution is made. The applicable mortality table is the table described in Internal Revenue Code Section 417(e).

Effective date

The effective date of the Plan is October 1, 1980.

Eligible employee

Eligible employee is an employee of the employer of affiliated company excluding (a) individual contractors, (b) employees subject to a collective bargaining agreement, or (c) employees classified as a law clerk, or file clerk or designated "of counsel not benefiting".

Entry date

Entry date means the first day of the month following an employee's date of employment.
