Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

Summary of Actuarial Methods

Actuarial Cost Method

The valuation of retirement benefits is determined under the “Unit Credit Actuarial Cost Method”, as prescribed by the Pension Protection Act of 2006 (PPA). In this method, the regular Plan cost arises from two sources: a Target Normal Cost and an Amortization Payment for the Funding Target Shortfall.

The Funding Target is determined as the actuarial present value of benefits as of the valuation date. The Shortfall is equal to the Funding Target less the Actuarial Value of Assets, adjusted by any existing credit balance.

The Funding Shortfall to the Applicable Funding Target is amortized in fifteen level payments.

The Normal Cost is the Actuarial Present Value of benefits expected to accrue during the valuation year plus anticipated administration expense, if any.

Actuarial Value of Assets

The Actuarial Value of Plan Assets is determined as the 2 year (3-point) Average Value of Assets as permitted under IRS Notice 2009-22 (Averaging 2022, 2023, and 2024 values).

Financial Assumptions

Interest Rates

Assumption: PPA Funding - Segment Rates without lookback subject to the Segment Rate Stabilization corridor.

Maximum Recommended Contribution – Pre-Segment Rate Stabilization Rates without lookback.

	Minimum Funding	Maximum Deductible	PBGC Premium
Segment 1 (0–5 years)	4.75%	4.37%	5.01%
Segment 2 (5–20 years)	4.96%	4.96%	5.13%
Segment 3 (20+ years)	5.59%	4.95%	5.15%
Effective Interest Rate	5.15%	4.92%	5.13%

Rationale: Plan sponsors have the option to elect the use of a full yield curve, or to use segmented interest rates (with a lookback period, if desired) subject to Segment Rate Stabilization constraints. The Institute is currently using segmented interest rates without lookback, based on prior elections.

PBGC premium: Spot segment rates for the month preceding the valuation date but not adjusted to reflect segment rate stabilization. The standard method (adopted January 1, 2014) is used for the PBGC variable-rate premium calculation.

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

Assumption: FASB ASC Topic 960 - Expected Return on Assets of 7.10% (previously, 7.25%), compounded annually. This is the assumed rate of return for the Plan's entire portfolio of assets, net of investment expenses and including an inflation assumption of 2.30%. This assumption represents an estimate of future experience and is based in part on observations of estimates inherent in market data.

Rationale: In developing the expected return on assets assumption, we relied on models and capital market assumptions developed by Milliman investment consultants, and the Plan's most recent investment policy. We reviewed the plan's actual asset allocation along with forward-looking data such as projections of inflation and total return growth. Mean returns, standard deviations and correlations between investment categories were determined and used in the investment return assumption.

Projections of performance, including active management return expectations, are taken into consideration to ensure consistency of the sponsor's selection of the investment return assumption.

Change in Assumption: The expected investment return decreased from 7.25% as of December 31, 2022 to 7.10% as of December 31, 2023. The expected investment return decreased due to changes in expectations of future experience as well as observations of estimates inherent in market data.

Form of Payment

Assumption: Eligible terminated vested participants are assumed to elect the lump sum option at age 65. Eligible active participants are assumed to elect the lump sum option at decrement. The computation is based on:

PPA Funding

Interest: Funding Interest Rates.

Mortality: Lump sum mortality table prescribed under PPA applicable for distributions in the valuation year.

Rationale: PPA Funding interest rates (reflecting Segment Rate Stabilization) are used to value lump sums. The mortality table is among those mandated for use under PPA for ERISA funding valuations.

Maximum Recommended Contribution

Interest: Maximum Recommended Contribution Interest Rates.

Mortality: Lump sum mortality table prescribed under PPA applicable for distributions in the valuation year.

Rationale: Maximum Recommended Contribution interest rates (reflecting pre-Segment Rate Stabilization) are used to value lump sums. The mortality table is among those mandated for use under PPA for ERISA funding valuations.

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

Lump Sum Interest Rate and Mortality Table for FASB ASC Topic 960:

Interest: 5.00% (previously, 4.50%).

Mortality: The applicable mortality table for 2024 in accordance with Internal Revenue Code Section 417(e).

Rationale: In order to reflect market behaviour and come up with a single lump sum rate, we looked at high quality corporate bonds rates of various terms for the current and the previous two years. We used the most recent mortality table required under the Pension Protection Act of 2006, in accordance with IRS regulations in effect for lump sum distributions.

Notwithstanding the above, Top 25 Highly Compensated Employees identified by client each year are assumed to be ineligible and therefore elect an annuity form of payment.

Change in Assumption: The lump sum interest rate was changed from 4.50% to 5.00%. The mortality table was updated for 2024 plan year.

Compensation Increase

Assumption: Not applicable.

Rationale for assumption: Plan is frozen so no salary scale assumption is required.

Compensation and Section 415 Maximum Limit Escalation

Assumption: Not applicable.

Rationale for assumption: Plan is frozen and no one is projected to be affected by either limit.

Administrative Expense

Assumption: None assumed.

Rationale for assumption: Administrative expenses are not paid out of Plan assets.

Consumer Price Index (CPI)

Assumption: CPI of 2.30%, compounded annually. This assumption represents an estimate of future experience and is based in part on observations of estimates inherent in market data.

Rationale for assumption: This assumption is based on current capital market assumptions.

Change in Assumption: The CPI was changed from 2.33% to 2.30% due to changes in expectations of future experience.

Demographic Assumptions

Mortality for PPA Funding

Assumption: The IRS 2024 Generational Mortality Tables, as promulgated by the IRS for plan years beginning in 2024.

Rationale for assumption: The mortality table is among those mandated for use under PPA for ERISA funding valuations.

Change in Assumption: Mortality tables were updated from the statutory static tables applicable for 2023 to the statutory generational tables applicable for 2024.

Mortality for FASB ASC Topic 960

Assumption: Pri-2012 Private Pension Plans Mortality Tables projected forward with mortality improvement scale MP-2021.

Rationale: The plan is not large enough to have statistically significant death experience. Therefore, it is reasonable to assume a general population mortality and longevity improvement expectations reflected in the PRI-2012 mortality tables and MP-2021 scale.

Retirement

Assumption: Illustrative rates are as follows:

Active Participants:

Age	Rate	Age	Rate
55	0.0320	60	0.0370
56	0.0330	61	0.0380
57	0.0340	62	0.2000
58	0.0350	63	0.0560
59	0.0360	64	0.0600
		65 and over	1.000

Terminated Vested Participants: Assumed to retire at age 65.

Rationale for assumption: The retirement assumption selected is reasonable for the contingency it is measuring, and is not anticipated to produce significant cumulative actuarial gains or losses over the measurement period.

Withdrawal

Assumption: Sarason T-7, which ranges from 9.67% at age 25 to 4.22% at age 50.

Rationale for assumption: The withdrawal assumption selected is reasonable for the contingency it is measuring, and is not anticipated to produce significant cumulative actuarial gains or losses over the measurement period.

Disability

Assumption: None assumed.

Rationale for assumption: There have been no new disability pension awards for several years. This experience supports the current assumption.

Disability Mortality

Assumption: None assumed.

Rationale for assumption: There have been no new disability pension awards for several years. This experience supports the current assumption.

Form of Payment

Assumption: Eligible terminated vested participants are assumed to elect the lump sum option at age 65. Eligible active participants are assumed to elect the lump sum option at retirement. Top 25 Highly Compensated Employees identified by the Institute each year are assumed to be ineligible and therefore elect an annuity form of payment.

Rationale for assumption: This assumption was developed based on plan experience and a reflection of the current and expected future economic environment. This assumption is reasonable for the contingency it is measuring and is not anticipated to produce significant actuarial gains or losses over the measurement period.

Marriage Assumption

Assumption: 100% of active lives are assumed to be married. Female spouses assumed to be 3 years younger than male spouse.

Rationale for assumption: The marriage assumption selected is reasonable for the contingency it is measuring, is an acceptable industry standard, and is not anticipated to produce significant cumulative actuarial gains or losses over the measurement period.
