## Methods

<b>Valuation date</b>	First day of plan year.
<b>Funding target</b>	Present value of accrued benefits as required by regulations under IRC §430.
<b>Target normal cost</b>	Present value of benefits expected to accrue during the plan year plus plan-related expenses expected to be paid from plan assets during the plan year as required by regulations under IRC §430.
<b>Decrement timing</b>	The approach used is called rounded middle of year (rounded MOY) decrement timing. Most events are assumed to occur at the middle of year during which the eligibility condition will be met or the start/end date will occur. For death and disability decrements, the rate applied is based on the participant's rounded age (nearest integer age) at the beginning of the year, to align with the methodology generally used to create those rate tables. For retirement and withdrawal decrements: the age is generally the participant's rounded age at the middle of the year.
<b>Actuarial value of assets</b>	The actuarial value of assets is equal to the market value of assets as of the valuation date plus the discounted present value of contributions made after the valuation date for the prior plan year, discounted using the effective interest rate for the prior plan year.
<b>Benefits not valued</b>	All benefits described in the Plan provisions section of this report were valued. WTW has reviewed the plan provisions with DPWN Holdings USA, Inc. and, based on that review, is not aware of any other significant benefits required to be valued that were not.

## Sources of Data and Other Information

## Assumptions Rationale - Significant Economic Assumptions

**Discount rate** The basis chosen was selected by the plan sponsor from among choices prescribed by law, all of which are based on observed market data over certain periods of time.

## Assumptions Rationale - Significant Demographic Assumptions

**Healthy Mortality** Assumptions used for funding purposes are as prescribed by IRC §430(h).

**Termination** Termination rates are based on a published table for pension participants believed to have similar characteristics to the plan population.

**Retirement** Retirement rates are based on plan sponsor expectations for the future with periodic monitoring of observed gains and losses caused by retirement patterns different than assumed.

## Source of Prescribed Methods

**Funding methods** The methods used for funding purposes as described, including the method of determining plan assets, are “prescribed methods set by law”, as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430, or were selected by the plan sponsor from a range of methods permitted by IRC §430.

## Changes in Assumptions and Methods

**Change in assumptions and methods since prior valuation**

- The segment interest rates used to calculate the funding target and target normal cost were updated to the current valuation date as required by IRC §430.
- The mortality table used to calculate the funding target and target normal cost was updated, reflects the latest mortality improvement scale and was changed from using a static projection of mortality improvement to a generational projection as required by guidance issued by IRS under IRC §430.

## Methods

<b>Valuation date</b>	First day of plan year.
<b>Funding target</b>	Present value of accrued benefits as required by regulations under IRC §430.
<b>Target normal cost</b>	Present value of benefits expected to accrue during the plan year plus plan-related expenses expected to be paid from plan assets during the plan year as required by regulations under IRC §430.
<b>Decrement timing</b>	The approach used is called rounded middle of year (rounded MOY) decrement timing. Most events are assumed to occur at the middle of year during which the eligibility condition will be met or the start/end date will occur. For death and disability decrements, the rate applied is based on the participant's rounded age (nearest integer age) at the beginning of the year, to align with the methodology generally used to create those rate tables. For retirement and withdrawal decrements: the age is generally the participant's rounded age at the middle of the year.
<b>Actuarial value of assets</b>	The actuarial value of assets is equal to the market value of assets as of the valuation date plus the discounted present value of contributions made after the valuation date for the prior plan year, discounted using the effective interest rate for the prior plan year.
<b>Benefits not valued</b>	All benefits described in the Plan provisions section of this report were valued. WTW has reviewed the plan provisions with DPWN Holdings USA, Inc. and, based on that review, is not aware of any other significant benefits required to be valued that were not.

## Assumptions Rationale - Significant Economic Assumptions

**Discount rate** The basis chosen was selected by the plan sponsor from among choices prescribed by law, all of which are based on observed market data over certain periods of time.

## Assumptions Rationale - Significant Demographic Assumptions

**Healthy Mortality** Assumptions used for funding purposes are as prescribed by IRC §430(h).

**Termination** Termination rates are based on a published table for pension participants believed to have similar characteristics to the plan population.

**Retirement** Retirement rates are based on plan sponsor expectations for the future with periodic monitoring of observed gains and losses caused by retirement patterns different than assumed.

## Source of Prescribed Methods

**Funding methods** The methods used for funding purposes as described, including the method of determining plan assets, are “prescribed methods set by law”, as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430, or were selected by the plan sponsor from a range of methods permitted by IRC §430.

## Changes in Assumptions and Methods

**Change in assumptions and methods since prior valuation**

- The segment interest rates used to calculate the funding target and target normal cost were updated to the current valuation date as required by IRC §430.
- The mortality table used to calculate the funding target and target normal cost was updated, reflects the latest mortality improvement scale and was changed from using a static projection of mortality improvement to a generational projection as required by guidance issued by IRS under IRC §430.
