Assumptions prescribed by law

Mortality	Before benefit payment period IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.
	During benefit payment period IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.

Assumptions selected by actuary

Asset return	8.00% for the current plan year. The asset return is based on information provided by SEI Investments Management Corporation. Evaluation of the asset return is outside the scope of assignment and would have required substantial additional work that we were not engaged to perform.
Expected expense	The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets.
Retirement	Active and inactive participants are assumed to retire at normal retirement age as defined in Plan provisions. We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary based on plan sponsor expectations. This assumption is reasonable with the plan's design and size. As we gain plan experience, we will monitor and make appropriate adjustments in the future.
Disability	None. This plan does not offer a subsidized disability benefit; therefore, the disability assumption is built into the withdrawal assumption.
Marriage	100% married; husbands are same age as wives. This assumption does not have material impact on the results of this report and has been selected based on the assumption set by the prior actuary.

Withdrawal

Selected rates of withdrawal are shown below:

Age	Males	Females
25	12.5%	17.5%
30	10.0%	15.0%
35	8.0%	12.0%
40	6.0%	9.0%
45	4.0%	6.0%
50	2.0%	3.0%
55	0.0%	0.0%

We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary. This assumption is reasonable with the plan's design. As we gain plan experience, we will monitor and make appropriate adjustments in the future.

Form of benefit

Participants are assumed to receive their benefits on the normal form at the assumed retirement age.

We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary and using the plan's normal form of payment. This assumption is reasonable with the plan's design. As we gain plan experience, we will monitor and make appropriate adjustments in the future.

Methods prescribed by law

Liability measure

Funding target is the present value of the benefits accrued on the valuation date. Target normal cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.

Methods selected by plan sponsor

Asset method

Market value.

Segment rates

24-month average with no weighting to prior law basis. Use rates where August is the last month included in the average.

PBGC premium basis

Variable rate premiums are calculated using census, market value of assets and the one-month average of corporate bond rates in effect on the valuation date. You elected this standard interest method for the 01/01/2024 plan year, and the method must be used for five years before a change can be made.

Segment 1 years 0-5	Segment 2 years 5-20	Segment 3 years 20+
5.01%	5.13%	5.15%

Methods elected by actuary

Retirees	Assets and liabilities for current and future retirees are included.
Vested benefits	<p>A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant’s vesting percentage applicable to each benefit on the valuation date.</p> <p>The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post-retirement death benefits for non-retired participants except as noted in the Plan provisions.</p>

Assumptions and methods elected by actuary - plan accounting (ASC 960)

With the exceptions below, all assumptions and methods are the same as those used in determining your plan’s regular funding target and target normal cost.

Mortality	Based on Pri-2012 base rate mortality table, adjusted with a 70/30 blend of blue/white collar and projected generationally using MP-2021.
Mortality base rates	<p>Before benefit payment period Employee amount-weighted, male and female</p> <p>During benefit payment period Retiree amount-weighted, male and female</p> <p>The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The 70/30 blend of blue/white collar base rate table was selected based on information provided by the plan sponsor.</p> <p>Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe “Approach 1” is reasonable for this plan.</p>
Mortality improvement	<p>MP-2021 is the most recent improvement scale published by the SOA in October 2021.</p> <p>In selecting this assumption, we considered the other parameters available in the MIM-2021-v4 application tool issued by the SOA in October 2023 and consider the selections in MP-2021 reasonable. Based on the sponsor’s input, plan experience does not show a need for long-term excess death or COVID death load adjustments.</p>

Interest rate used to value liabilities 8.00%

The asset return is based on information provided by SEI Investments Management Corporation. The interest rate used is the same as the current expected long-term return on plan assets for purposes of the net periodic benefit cost calculation.

Referencing the plan sponsor selected expected long-term return on plan assets under ASC715 for purposes of determining the interest rate used for plan accounting purposes under ASC960 was described in previous reports by Willis Towers Watson. Evaluation of the asset return is outside the scope of assignment and would have required substantial additional work that we were not engaged to perform.

Treatment of administrative expenses

No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.

Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.

Note – expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception – contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.

Schedule SB, Line 24 – Change in Actuarial Assumptions
Good Shepherd Penn Partners Defined Benefit Pension Plan
EIN 20-8283421 Plan No. 001

Certain non-prescribed assumptions have been changed since last year. These assumptions were changed to better reflect the anticipated experience of your plan. See the attachment, Part V – Statement of Actuarial Assumptions/Methods, for the rationale for each assumption.

The assumed asset return for the current year has decreased from 8.10% to 8.00%. This rate is used in the calculation of the actuarial value of plan assets.
