## **Actuarial value of assets for determining minimum required contributions**

Average of the fair market value of assets on the valuation date and 12 and 24 months preceding the valuation date, adjusted for contributions, benefits, administrative expenses and expected earnings with such expected earnings limited as described in IRS Notice 2009-22. The average asset value must be within 10% of market value, including discounted contributions receivable (discounted using the effective interest rate for the 2023 plan year.)

The method of computing the actuarial value of assets complies with rules governing the calculation of such values under the Pension Protection Act of 2006 (PPA). These rules produce smoothed values that reflect the underlying market value of plan assets but fluctuate less than the market value. As a result, the actuarial value of assets will be lower than the market value in some years and greater in other years. However, over the long term under PPA's smoothing rules, the method has a significant bias to produce an actuarial value of assets that is below the market value of assets.

## **Benefits not valued**

All benefits described in the Plan Provisions section of this report were valued based on discussions with TechnipFMC regarding the likelihood that these benefits will be paid. Willis Towers Watson has reviewed the plan provisions with TechnipFMC and, based on that review, is not aware of any significant benefits required to be valued that were not.

## **Sources of Data and Other Information**

The plan sponsor through its third party administrator furnished participant data as of January 1, 2024. Information on assets, contributions and plan provisions was supplied by the plan sponsor. Data and other information were reviewed for reasonableness and consistency, but no audit was performed. In consultation with TechnipFMC, no assumptions were made for missing or apparently inconsistent data elements and it is our understanding that no significant events occurred that would require adjustment to the data. We are not aware of any errors or omissions in the data that would have a significant effect on the results of our calculations.

## **Assumptions Rationale – Significant Economic Assumptions**

### **Discount rate**

The basis chosen was selected by the plan sponsor from among choices prescribed by law, all of which are based on observed market data over certain periods of time.

## Assumptions Rationale – Significant Demographic Assumptions

<b>Healthy Mortality</b>	Assumptions used for funding purposes are as prescribed by IRC §430(h).
<b>Benefit commencement date for deferred benefits</b>	Deferred vested participants' assumed commencement age is intended to capture the average age at commencement. Deferred vested early commencement factors are not subsidized so that the difference between this approach and using assumed commencement rates at multiple ages is not expected to be significant.
<b>Form of payment</b>	The percentage of retiring participants assumed to take joint and survivor annuities, and the assumed survivor percentages, are based on historical experience with annual consideration of whether any conditions have changed that would be expected to produce different results in the future.
<b>Percent married</b>	The assumed percentage married is based on general population statistics on the marital status of individuals of retirement age.
<b>Spouse age</b>	The assumed age difference for spouses is based on a general population statistics of the age difference for married individuals of retirement age.

## Source of Prescribed Methods

### Funding methods

The methods used for funding purposes as described in Appendix A, including the method of determining plan assets, are “prescribed methods set by law”, as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430, or were selected by the plan sponsor from a range of methods permitted by IRC §430.

## Changes in Assumptions and Methods

### Change in assumptions since prior valuation

The segment interest rates used to calculate the funding target were updated to the current valuation date as required by IRC 430, including the impact of the American Rescue Plan Act.

The mortality table used to calculate the funding target and target normal cost was updated to reflect the latest mortality improvement scale, as required by guidance issued by IRS under IRC §430, and the base mortality table was updated to Pri-2012, as required.

The assumed plan-related expenses added to the target normal cost were changed from \$19,000 to \$15,000.
