AIEM ATTORNEYS AND COUNSELORS AT LAW PSC CASH BALANCE PLAN

Schedule SB, Part V - Summary of Actuarial Assumptions/ Methods

The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

Actuarial Cost Methods

Funding Target Liability: As required by PPA, the Traditional Unit Credit Cost Method is used.

Actuarial Value of Assets: Market Value, as provided by the Trustee.

Funding Target Liability

Valuation Date: December 31, 2024

Demographic Information: The demographic information was provided as of December 31, 2024 by AIEM Attorneys and Counselors at Law PSC. Although we did not audit the data, we did review the data for reasonableness.

Actuarial Valuation Software: For purposes of developing the projected future benefit payments as well as determining attributed liabilities and normal costs as of the valuation date, we utilized the ASC software platform developed by Actuarial Systems Corporation. We believe this externally developed valuation system is appropriate, was used for its intended purpose, and did not produce unreasonable results.

Interest Rates for Minimum Required Contribution and Maximum Alternative Contribution: The adjusted 24-month average December 2024 funding segment rates using 25-year average segment rate corridors were utilized as prescribed by 29 US Code Section 1083, after reflection of interest rate stabilization provisions included in various legislation.

Segment	Interest Rate
Segment 1	5.01%
Segment 2	5.26%
Segment 3	5.59%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

Effective Interest Rate: 5.26%

Interest Rates for determining the Low-Default Risk Obligation Measure (LDROM) Liability: The December 2024 funding segment rates were utilized as prescribed by IRC Section 430(h), without reflection of the interest rate stabilization provisions included in various legislation. These rates were utilized to determine the LDROM calculations for annuities and lump sums. Please note that the LDROM liability could be determined using other rates which could result in a higher or lower liability for such purpose.

AIEM ATTORNEYS AND COUNSELORS AT LAW PSC CASH BALANCE PLAN

Segment	Interest Rate
Segment 1	5.01%
Segment 2	5.26%
Segment 3	5.36%

Effective Interest Rate: 5.26%

Projected Cash Balance Interest Crediting Rate: 5.50%

Rate of Compensation Increase: Salaries are assumed to remain constant until retirement.

Retirement Rates: Employees were assumed to retire at normal retirement age (age 62).

Post-retirement Mortality: The base mortality tables are the blended sex distinct Pri-2012 mortality tables. The base mortality table is adjusted as described in Internal Revenue Regulation 1.430(h)(3)-1(c)(2) by projecting mortality improvements using the 2024 Adjusted Scale MP-2021 Rates from the year 2012 through 2024, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

Administrative Expenses: Actual plan expenses, not including investment advisory fees, paid out of the trust during the plan year - \$0.

Form of Benefit: 100% of active participants are assumed to receive a deferred lump sum distribution at their assumed retirement age. 100% of terminated vested participants are assumed to receive an immediate lump sum distribution.
