# Appendix B: Summary of Actuarial Assumptions and Methods

## A. Funding

Certain assumptions are prescribed as noted below. The other assumptions are estimates derived from historical and recent experience as well as market observations, combined with professional judgment about future expectations.

### Interest for IRS funding purposes

The interest rates used for the 2024 plan year are the 24-month average corporate bond segment rates for January 2024 subject to funding stabilization. Under stabilization, the interest rates used for funding purposes are calculated in the usual manner (24-month average corporate bond rates) but are then constrained to be within a corridor around a 25-year average of those same bond rates. Each of the three segments of the yield curve reflecting the 25-year average rates is constrained to be no less than 5%. For 2024, the stabilization corridor is 5%. It will remain at 5% through 2030 and then increase by 5% per year beginning in 2031 until it reaches 30% for 2035. The interest rate description above reflects that the plan sponsor elected to apply the ARPA provisions beginning with the 2021 plan year. The rates are as follows:

Assumption	Payments in the First 5 Years	Payments in Years 6 – 20	Payments Thereafter	Effective Interest Rate
Current Year, reflecting stabilization	4.75%	4.96%	5.59%	5.21%
Current Year, without stabilization	4.37%	4.96%	4.95%	4.94%
Prior Year, reflecting stabilization	4.75%	5.00%	5.74%	5.31%
Prior Year, without stabilization	2.13%	3.62%	3.93%	3.74%

## Appendix B: Summary of Actuarial Assumptions and Methods

### Interest for PBGC premium purposes

Under the Alternative Method, the interest rates used to determine the PBGC variable-rate premium for the 2024 plan year are the same as those used for funding, without reflecting funding stabilization, as follows:

Year	Method	Payments in the First 5 Years	Payments in Years 6 – 20	Payments Thereafter
Current Year	Alternative	4.37%	4.96%	4.95%
Prior Year	Alternative	2.13%	3.62%	3.93%

These interest rates are based on the plan sponsor's election (the plan sponsor currently has the option to change methods) and are subject to the constraints established by law.

### Mortality Rates

Pri-2012 separate employee and annuitant healthy mortality tables, projected generationally using the Adjusted MP-2021 scale as described in the final IRS mortality regulations released in October 2023.

This assumption is one of the choices allowed by the regulations. The prior year assumption used RP-2006 separate employee and annuitant healthy mortality tables, projected generationally using Scale MP-2021.

### Salary Increases

4.00%.

This assumption is based on historical and current data, adjusted to estimated future experience and professional judgment.

### Benefit Election

100% of participants are assumed to elect payment in the form of a single life annuity.

This assumption is based on historical and current data, adjusted to reflect estimated future experience and professional judgment.

### Sample Termination Rates

None. This is appropriate for a plan of this size.

## Appendix B: Summary of Actuarial Assumptions and Methods

### Sample Disability Rates

None. This is appropriate for a plan of this size.

### Retirement (From Active Status) Rates

65 with 5 years of service, or attained age if later.

This assumption is based on historical and current data, adjusted to reflect estimated future experience and professional judgment.

### Description of Weighted Average Retirement Age

Age 65, determined as follows: The overall weighted-average retirement age is the average of the individual weighted-average retirement ages based on all the active participants included in the actuarial valuation.

### Retirement From Inactive Status

Age 65

### Percent Married

100%. Spouse is assumed to be the opposite gender.

### Age Difference

Male spouses are assumed to be three years older than female spouses.

### Administrative Expenses

An expense assumption is required under the funding rules. Plan-related expenses of \$16,680 are expected to be paid by the plan during the year on a monthly basis (equivalent to \$16,229 payable at the beginning of the year).

This assumption is based on recent historical data, adjusted estimated future experience and professional judgment.

### Asset Method

As selected by the plan sponsor, assets are valued at market value.

Employees Retirement Plan of Roofers Union Local No. 8 Welfare Fund, EIN: 11-1653210 / PN: 002

## Appendix B: Summary of Actuarial Assumptions and Methods

### Funding Method and Contribution Requirement

Funding method is unit credit actuarial cost method, as prescribed by law. The liability is measured on an accrual-to-date basis using mandated mortality tables and interest rates with no salary projection past the end of the year.

If all assumptions are met (including the investment earnings implicitly assumed by the interest rate), funding the plan at the minimum required contribution level is generally designed to achieve a 100% funded status within fifteen years. Once that is achieved, or for overfunded plans, the required contribution will generally equal the target normal cost reduced by any overfunding.

### Non-Prescribed Assumption Changes Since Prior Valuation

None

### Actuarial Models

Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprising both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuary.

## Section 2: Valuation Results—Funding

### Shortfall amortization bases

The unfunded funding target (funding target minus actuarial value of assets net of credit balances) is amortized over fifteen years. In each year, the unfunded funding target minus the outstanding balance of the prior shortfall bases established is set up as another base and amortized over a new fifteen-year period. If the unfunded funding target falls below zero (i.e., net assets exceed the funding target), all existing bases are eliminated. Further, the Plan is exempt from establishing a shortfall amortization base if the funded percentage (with assets net of the prefunding balance, if any portion of the prefunding balance is used to offset the required contribution during the current year) is at least 100%.

#### Schedule of Shortfall Amortization Bases as of January 1, 2024

Year Established	Original Base	Present Value of Remaining Installments	Years Remaining	Shortfall Amortization Installment
2024	\$15,167	\$15,167	15	\$1,386
2023	14,703	14,054	14	1,347
2022	17,344	15,871	13	1,603
2021	63,919	<u>55,674</u>	12	<u>5,960</u>
<b>Total</b>		<b>\$100,766</b>		<b>\$10,296</b>
