As permitted by law, rates reflecting stabilization are used to determine the funding target and target normal cost, and thus the minimum required contribution under IRC §430 for the plan. Because these assumptions are subject to a corridor based on average interest rates over a 25-year period, they may differ from (and currently are higher than) current market interest rates, and may be inconsistent with other economic assumptions used in the valuation.

Retirement

Rates varying by age

For purposes of determining the Funding Target (disregarding at-risk assumptions), the rates at which participants retire by age are shown below.

Percentage retiring during the year	
Age	Rate
60-64	10.0%
65-66	50.0
67-69	25.0
70	100.0

Benefit commencement date:

- Preretirement death benefit The later of the death of the active participant or the date the participant would have attained age 65
- Retirement benefit Upon termination of employment

Form of payment

Lump sum payment

Percent married

100% of males; 100% of females.

Spouse age

Wife zero years younger than husband

At-risk assumptions

For at-risk calculations, all participants eligible to elect benefits during the current and subsequent ten plan years are assumed to commence benefits at the earliest possible date under the plan, but not before the end of the current plan year, except in accordance with the regular valuation assumptions. In addition, all participants (not just those eligible to begin benefits within the next 11 years) are assumed to elect the most valuable form of benefit under the plan, which is usually the lump sum form of payment.

Timing of benefit payments

Annuity payments are payable monthly at the beginning of the month and lump sum payments are payable on date of decrement.

Methods

Valuation date	First day of plan year
Funding target	Present value of accrued benefits as required by regulations under IRC §430.
Target normal cost	Present value of benefits expected to accrue during the plan year if any plus plan-related expenses expected to be paid from plan assets during the plan year as required by regulations under IRC §430.
Actuarial value of assets	Average of the fair market value of assets on the valuation date and the two immediately preceding valuation dates, adjusted for contributions, benefits, administrative expenses and expected earnings (with such expected earnings limited as described in IRS Notice 2009-22). The average asset value must be within 10% of market value, including discounted contributions receivable (discounted using the effective interest rate for the prior plan year.)
Benefits not valued	All benefits described in the Plan Provisions section of this report were valued. WTW has reviewed the plan provisions with the plan sponsor and, based on that review, is not aware of any significant benefits required to be valued that were not.
Decrement Timing Model	Rounded Middle of Year – All decrements are assumed to occur at the middle of the year to approximate the pattern of decrements that occur throughout the year. In addition, eligibility for benefits, commencement and cessation of benefits, and other commencement factors will reflect the middle of the year timing.

Sources of Data and Other Information

The plan sponsor furnished participant data as of 1/1/2024. Information on assets, contributions and plan provisions was supplied by the plan sponsor. Data and other information were reviewed for reasonableness and consistency, but no audit was performed. Based on discussions with the plan sponsor, assumptions or estimates were made when data were not available, and the data was adjusted to reflect any significant events that occurred between the date the data was collected and the measurement date.

There are no significant assumptions needed for missing or inconsistent data.

We are not aware of any errors or omissions in the data that would have a significant effect on the results of our calculations.

Assumptions Rationale - Significant Economic Assumptions

Discount rate	The basis chosen was selected by the plan sponsor from among choices prescribed by law, all of which are based on observed market data over certain periods of time.
Interest crediting rate	The plan credits interest to cash balance accounts using the 30-year Treasury rate. Our long term estimate of the 30-year Treasury rate is 4.15%, based on current conditions.
Plan-related expenses	Used prior year's actual expenses. Prior year's actual expenses are expected to be a reasonable approximation of the current year's expenses.

Assumptions Rationale - Significant Demographic Assumptions

Healthy Mortality	Assumptions used for funding purposes are as prescribed by IRC §430(h).
Termination	Termination rates reflect plan sponsor expectations of future experience based on termination patterns observed during the period of 2015-2020
Retirement	Retirement rates reflect plan sponsor expectations of future experience based on retirement patterns observed during the period of 2015-2020
Benefit commencement date for deferred benefits:	
<ul style="list-style-type: none">Preretirement death benefit	Surviving spouses are assumed to begin benefits at the earliest permitted commencement date because ERISA requires benefits to start then unless the spouse elects to defer. If the spouse elects to defer, actuarial increases from the earliest commencement date must be given, so that a later commencement date is expected to be of approximately equal value, and experience indicates that most spouses do take the benefit as soon as it is available.

Prescribed Methods

Funding methods

The methods used for funding purposes as described in Appendix A, including the method of determining plan assets, are “prescribed methods set by law”, as defined in the actuarial standards of practice (ASOPs). These methods are required by IRC §430, or were selected by the plan sponsor from a range of methods permitted by IRC §430.

Changes in Assumptions and Methods

Change in assumptions and methods since prior valuation

- The segment interest rates used to calculate the funding target were updated to the current valuation date as required by IRC §430.
- The mortality table was updated to the current required table, as required by guidance issued by IRC under IRC §430.
- The interest crediting rate was updated to reflect current conditions.
- The assumed plan-related expenses added to the target normal cost were changed from \$53,693 to an estimate based on prior year expense information, \$96,844.

Other Plan Provisions

Forms of payment	Preretirement death benefits are payable only as described above. Monthly pension benefits are paid as described above as a life annuity with a 10 year certain period, if the participant has no spouse as of the date payments begin, or if the participant so elects. Otherwise, benefits are paid in the form of a 50% joint and survivor annuity option or, if the participant elects and the spouse consents, another actuarially equivalent optional form offered by the plan. Optional forms are a 100% joint and survivor annuity, a 75% joint and survivor annuity, or a lump sum. Actuarial equivalence is based on the greater of: 1) 30-year Treasury Securities and post-retirement mortality using the Applicable Mortality Table as set forth in Revenue Ruling 2001-62 or 2) 5.5% interest and RP-2000 mortality (female) projected 10 years using projection scale AA.
Pension Increases	None
Plan participants' contributions	None
Maximum limits on benefits and pay	All benefits and pay for any calendar year may not exceed the maximum limitations for that year as defined in the Internal Revenue Code. The plan provides for increasing the dollar limits automatically as such changes take effect. Increases in the dollar limits are assumed for determining pension cost but are not assumed for funding or AFTAP purposes

Future Plan Changes

No plan changes made after the end of the plan year were recognized in determining the contribution requirements. WTW is not aware of any future plan changes that are required.

Changes in Benefits Valued Since Prior Year
