Appendix B: Summary of Actuarial Assumptions and Methods

Funding

Certain assumptions are prescribed as noted below. The other assumptions are estimates derived from historical and recent experience as well as market observations, combined with professional judgment about future expectations.

Interest for IRS funding purposes

The interest rates used for the 2024 plan year are the 24-month average corporate bond segment rates for September 2023 (a four-month lookback) subject to funding stabilization. Under stabilization, the interest rates used for funding purposes are calculated in the usual manner (24-month average corporate bond rates) but are then constrained to be within a corridor around a 25-year average of those same bond rates. Each of the three segments of the yield curve reflecting the 25-year average rates is constrained to be no less than 5%. For 2024, the stabilization corridor is 5%. It will remain at 5% through 2030 and then increase by 5% per year beginning in 2031 until it reaches 30% for 2035.

Assumption	Payments in the First 5 Years	Payments in Years 6 – 20	Payments Thereafter	Effective Interest Rate
Current Year, reflecting stabilization	4.75%	4.87%	5.59%	5.11%
Current Year, without stabilization	3.62%	4.46%	4.52%	4.42%
Prior Year, reflecting stabilization	4.75%	5.00%	5.74%	5.25%
Prior Year, without stabilization	1.41%	3.09%	3.58%	3.21%

Appendix B: Summary of Actuarial Assumptions and Methods

Mortality Rates

Pri-2012 combined employee and annuitant healthy mortality tables, projected through the valuation date plus a number of years that varies by age and sex per IRC 1.430(h)(3)-1(c)(3)(ii)(A) using the Adjusted MP-2021 scale as described in the final IRS mortality regulations released in October 2023.

This assumption is one of the choices allowed by the regulations. The prior year assumption used, RP-2006 combined employee and annuitant healthy mortality tables, projected forward using scale MP-2021 through the valuation date plus a number of years that varies by age and sex.

Salary Increases

Not applicable

Benefit Election

60% of participants are assumed to elect the Straight Life Annuity and 40% of participants are assumed to elect the 100% Joint and Survivor annuity option.

This assumption is based on historical and current data, adjusted to reflect estimated future experience and professional judgment.

Retirement From Inactive Status

Age 62 if terminated employment prior to January 1, 2011; Age 65 if terminated employment on or after January 1, 2011

Percent Married

80%. Spouse is assumed to be the opposite gender.

Age Difference

Male spouses are assumed to be four years older than female spouses.

Appendix B: Summary of Actuarial Assumptions and Methods

Administrative Expenses

An expense assumption is required under the funding rules. Plan-related expenses of \$50,000 are expected to be paid by the plan during the year.

This assumption is based on recent historical data, adjusted to reflect advice from the plan sponsor, and estimated future experience and professional judgment.

Asset Method

As selected by the plan sponsor, assets are determined by averaging the market value as of the valuation date and the adjusted market values as of the preceding two years. The resulting value is limited to between 90% to 110% of market value of assets.

The adjusted market values reflect cash flow and expected earnings to the valuation date. The expected earnings are based on an assumed rate of return of 6.0%, not to exceed the applicable third segment rate of 5.92% in 2022 and 5.74% in 2023.

Funding Method and Contribution Requirement

Funding method is unit credit actuarial cost method, as prescribed by law. The liability is measured on an accrual-to-date basis using mandated mortality tables and interest rates with no salary projection past the end of the year.

Plan sponsors are required under Internal Revenue Code Section 430 to make a minimum level of contributions to qualified pension plans. Available credit balances can be used to satisfy this required contribution. In general, the minimum required contribution is the sum of the target normal cost and an installment that amortizes the plan's funding shortfall, offset by any plan overfunding, if applicable. If all assumptions are met (including the investment earnings implicitly assumed by the interest rate), funding the plan at the minimum required contribution level is generally designed to achieve a 100% funded status within fifteen years. Once that is achieved, or for overfunded plans, the minimum required contribution will generally equal the target normal cost reduced by any overfunding.

Non-Prescribed Assumption Changes Since Prior Valuation

- Assumption Type: Administrative expenses
- Current Assumption: \$50,000
- Prior Assumption: \$45,000
- Reason for Change: Plan experience and future expectations

Appendix B: Summary of Actuarial Assumptions and Methods

Actuarial Models

Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are prepared to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprising both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible Enrolled Actuary.
