Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

Asset Valuation Method Market Value.

Funding Method Funding method as required by the Pension Protection Act of 2006. Under this method, the plan's funding target is determined as the sum of the actuarial present values (as of valuation date) of the individual accrued benefits taken into account for valuation purposes as of the beginning of the plan year.

The target normal cost is the sum of actuarial present values (on the valuation date) of the benefits deemed to accrue in the plan year.

An individual's accrued benefit for valuation purposes as of any determination date with respect to any assumed separation date(s) is the accrued benefit described under the plan, based on credited service as of the determination date, with plan compensation, benefits, and offset (if any), projected to the separation date.

The benefit deemed to accrue for an individual during a plan year is the excess of the accrued benefit for valuation purposes at the end of the plan year over the accrued benefit for valuation purposes at the beginning of the plan year.

If multiple separation dates are used, the actuarial present values take into account the probability of each separation event.

Changes Since the Prior Valuation

- The Expenses assumption was changed. Previously it was “Plan-related expenses paid during the Plan Year”. This assumption was changed due to the valuation date changing.
- For the Plan Year beginning October 1, 2024, the valuation date would normally have been September 30, 2025. Due to the Plan’s termination effective November 30, 2024, the valuation date was changed to October 1, 2024.
