Assumptions prescribed by law

Mortality	<a href="#">Before benefit payment period</a> IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.
	<a href="#">During benefit payment period</a> IRS Prescribed Mortality - Optional Combined Table for Small Plans, male and female.

Assumptions selected by actuary

Inflation	2.40% increase per year.  Our long-term inflation assumption considered the current economic environment, recent and historical data, and forecasts from Federal Reserve Bank FOMC, Congressional Budget Office, and Survey of Professional Forecasters. See Long-Term Capital Market Assumptions link.
Asset return	7.25% for the current plan year.  The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. For details, see the Long-Term Capital Market Assumptions link.
Expected expense	The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets, with an updated estimate of PBGC premiums. This is the best estimate available of upcoming year's expenses.
Retirement	Active and inactive participants are assumed to retire at normal retirement age as defined in <a href="#">Plan provisions</a> .  This assumption is based on the results of recent experience analysis and anticipated future experience.
Disability	None. This plan does not offer a subsidized disability benefit therefore the disability assumption is built into the withdrawal assumption.
Marriage	75% married; husbands are 3 years older than wives.  This assumption does not have material impact on the results of this report and has been selected based on our best estimate of active workforce.
Withdrawal	None. Due to the size of the plan and limited experience, we're not recognizing a withdrawal assumption prior to retirement.

**Form of benefit and basis** 100% of active participants will elect a benefit paid in a lump sum at the assumed retirement age.

Active participants who terminate before the earliest assumed retirement age are assumed to receive a single sum immediately. Participants who are already terminated on the valuation date are assumed to elect a single sum payable at the assumed retirement age.

This assumption is based on the results of recent experience analysis and anticipated future experience.

The lump sum benefit is based on the Applicable Mortality and the plan's funding target interest rates, as prescribed.

#### Methods prescribed by law

**Liability measure** Funding target is the present value of the benefits accrued on the valuation date. Included in Funding Target is the value of any missed required minimum distributions (defined in IRC §401(a)(9) and Treasury Regulation §1.401(a)(9)), equal to back payments with interest at 7.50%.

Target normal cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.

**Lump sum payments** Lump sum payments are valued using the plan's funding target interest rates as required, per IRS guidance. These rates are currently higher than the actual rates used to determine lump sum distributions. Therefore, plan liabilities do not currently recognize this additional cost and this may result in the plan not accumulating adequate assets. You may wish to consider additional contributions.

#### Methods selected by plan sponsor

**Asset method** The asset valuation method is prescribed by law for plans that elect to use a value other than market value.

For each of the preceding two years, an expected value of assets at the end of the year is compared to the end of year market value. The resulting gain or loss is recognized evenly over three plan years.

The expected value includes contributions, distributions, any deducted administrative expenses, and expected earnings (based on the lesser of the assumed interest rate or the maximum allowable rate). The deferred gains and losses are added to the current market value and then restricted to no more than 110% and no less than 90% of that market value.

When actual returns exceed the assumed return, the actuarial value of assets will lag below market value. The lag and the smoothing effect are limited since the value must be within 10% of market value.

**Segment rates** 24-month average with no weighting to prior law basis. Use rates where November is the last month included in the average.

**PBGC premium basis** Your plan is a small plan as defined by PBGC. Variable rate premiums are calculated using census, market value of assets and interest rates in effect on the current valuation date. Interest rates are the one-month average of corporate bond rates. You elected this Standard interest rate method for the 01/01/2008 plan year.

Segment 1 years 0-5	Segment 2 years 5-20	Segment 3 years 20+
4.99%	5.19%	5.37%

**Methods elected by actuary**

**Retirees** Assets and liabilities for current and future retirees are included.

**Vested benefits** A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant’s vesting percentage applicable to each benefit on the valuation date.  
 The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post retirement death benefits for non-retired participants except as noted in the Plan provisions.

**Assumptions and methods elected by actuary - plan accounting (ASC 960)**

With the exceptions below, all assumptions and methods are the same as those used in determining your plan’s regular funding target and target normal cost.

**Mortality** Based on Pri-2012 Total dataset base rate mortality table projected generationally using the using the Principal Mortality Improvement Scale (Principal 2024).

**Mortality base rates**  
**Before benefit payment period**  
 Employee amount-weighted, male and female  
**During benefit payment period**  
 Retiree amount-weighted, male and female

The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The Total dataset base rate table was selected based on information provided by the plan sponsor.

Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe “Approach 1” is reasonable for this plan.

Mortality improvement

Principal 2024 MI scale is based on MIM-2021-v4 application tool issued by SOA in October 2023 with the following parameters:

Parameter	Principal 2024
Historical dataset	SSA
Whittaker-Henderson Graduation	Order 3
Interpolation Structure	Basic
Graduated MI data last year ("jumping off" point)	2017
H/D transition ultimate year by age/cohort	2030/2030
Weight placed on interpolation by cohort	50%
Initial Slope periods (constraint)	2016-2017 (0.000)
LTR	SSA LTR 2024
COVID-19 or Excess load	None <sup>1</sup>

<sup>1</sup>Based on the sponsor’s input, plan experience does not show a need for long-term excess death or Covid death load adjustments. See [Mortality documentation](#) for rationale and additional information.

Interest rate used to value liabilities

6.25%

The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes’ arithmetic returns of the plan’s target asset allocation, and then converted to the geometric under lognormal distribution assumption. For details, see Long-Term Capital Market Assumptions link.

Treatment of administrative expenses

No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.

Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.

Note - expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception – contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.

#### Basis for lump sums

##### Interest rate

Based on the three segment yield curve: 3.55%/3.95%/4.95%  
The plan document defines the lump sum interest rate based on IRC §417(e) rates which closely tie to the high quality corporate bond yields. According to our most recent study, the long-term expected yields for short/intermediate/long corporate bonds are 3.55%/3.95%/4.95%. For details, see Corporate AA yield in Table 3 of Long-Term Capital Market Assumptions link.

##### Mortality

We have selected the same [mortality](#) assumption for lump sum payments, but with a 50/50 blend of male and female total dataset base rates and mortality improvement scales. This reflects the IRS practice of defining lump sum mortality on a unisex basis.

 To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

Schedule SB, Line 22 - Description Of Weighted Average Retirement Age  
 District Government Employees Federal Credit Union Defined Benefit Plan  
 EIN 52-6066128 Plan No. 001

Active participants are expected to retire at the plan's assumed retirement age. The retirement rate reflects only those participants who meet retirement eligibility. An active participant working past assumed retirement age is expected to retire at current age.

(1) Age	(2) Expected Active Headcount	(3) Retirement Rate	(4) Expected Retirements (2)*(3)	(5) Weighted Age (1)*(4)
65	2.8990	1.0000	2.8990	188.4360
Total			2.8990	188.4360
Average				65.00

This report reflects the maximum benefit limits under Internal Revenue Code (IRC) Section 415 and maximum compensation limits under IRC Section 401 in effect on the first day of each plan year.

The following is a summary of plan provisions and does not alter the intent or meanings of the provisions contained in the contract or plan document. This report reflects the provisions of the plan restatement signed 11/22/2019 and the SECURE 2.0 Act Amendment signed 01/12/2024.

#### Plan eligibility

Age	Attained age 20 1/2.
Service	Six months of service. No employee will become an active participant and no inactive or former participant will again become an active participant on or after 05/31/2004.

#### Normal retirement benefit

Age	Later of attained age 65 or five years after plan entry.
Form	Monthly annuity with payments guaranteed for 10 years and life thereafter (optional forms may be elected in advance of retirement).
Amount (accrued benefit)	58% of average compensation multiplied by the accrued benefit adjustment and the short service percentage. A member's accrued benefit shall not be less than the amount of monthly benefit accrued under the plan as of the day before 04/01/1981. Accrued benefits were frozen effective 05/31/2004.

#### Early retirement benefit

Age	Attained age 55.
Service	Five years of vesting service.
Form	Same as normal retirement benefit.
Amount	Accrued benefit on early retirement date reduced by 6 2/3% for each year up to five and 3 1/3% for each year between five and ten that the early retirement date precedes normal retirement date.

#### Late retirement benefit

Form	Same as normal retirement benefit.
Amount	Greater of accrued benefit on late retirement date or accrued benefit on normal retirement date actuarially increased to late retirement date.

### Termination benefit

Vesting percentage	100% after five years of vesting service.
Form	Same as normal retirement benefit with income deferred until normal retirement date.
Amount	Accrued benefit on date of termination multiplied by the vesting percentage.

### Survivor annuity death benefit (a vested benefit)

Eligibility	Qualified married participant fully or partially vested in an accrued benefit.
Form	Monthly annuity payable to spouse, deferred to participant's earliest retirement date if later than the date of death.
Amount	If death occurs, the amount paid to the surviving spouse is equal to the amount that would have been paid had the participant terminated employment on the date of death and survived to his/her earliest retirement age, retired with a qualified joint and 50% survivor annuity in effect, then died the next day.

### Definitions

Accrual Service	Period of service from date of entry to severance date expressed as whole years and fraction parts of a year on the basis that 365 days equal one year. Accrual service after 05/31/2004 is excluded.
Vesting Service	Period of service from date of entry to severance date expressed as whole years and fraction parts of a year on the basis that 365 days equal one year.
Accrued benefit adjustment	The quotient of (a) divided by (b), shall not exceed 1.00: (a) The participant's accrual service to date. (b) The participant's potential accrual service as of the date they reach Normal Retirement Age.
Average compensation	The monthly average of total pay received for the five consecutive years out of the latest ten years which gives the highest average. Average compensation is frozen as of 05/31/2004.
Short Service Percentage	The quotient of (a) divided by (b), shall not exceed 1.00: (a) The participant's potential accrual service as of the date they reach Normal Retirement Age. (b) 15 years.

[Optional forms of benefit payments](#)

The optional forms of benefit payments are:

- Monthly annuity payable for life, or 5, 10, or 15 years certain and life.
- Monthly annuity payable as a survivorship life annuity with survivorship percentages of 50, 66 2/3, 75, or 100.
- Single sum payment equal to the present value of the retirement benefit.

The optional form conversion basis is 7.50% interest and the 1983 Group Annuity Mortality table for payments other than lump sums.

[Lump sum provisions](#)

Small amount force out (SAFO) – allowed up to \$7,000.

Lump sums in excess of SAFO - are allowed at termination of employment and retirement.

Conversion –greater of the deferred or immediate rate with early retirement factor based on the applicable interest rate and applicable mortality table as set forth in Code Section 417. The applicable interest rate uses the second calendar month preceding the first day of the stability period which is the month that contains the annuity starting date for the distribution.

**Changes in Principal Eligibility or Benefit Provisions**

There have been no changes in principal eligibility or benefit provisions since the last valuation.

**Significant Event**

The enrolled actuary has not been made aware that any significant events have occurred during the year.

Schedule SB, Line 24 – Change in Actuarial Assumptions  
District Government Employees Federal Credit Union Defined Benefit Plan  
EIN 52-6066128 Plan No. 001

Certain non-prescribed assumptions have been changed since last year. These assumptions were changed to better reflect the anticipated experience of your plan. See the attachment, Part V – Statement of Actuarial Assumptions/Methods, for the rationale for each assumption.

The assumed asset return for the current year has increased from 7.00% to 7.25%. This rate is used in the calculation of the actuarial value of plan assets.
