Actuarial Equivalence

Plan benefits — 1951 Group Annuity Table projected to 1970 weighted 75% male and 25% female at age 55 (but the mortality of dependent spouses is assumed to be 75% female and 25% male at age 55); and a 5% interest rate.

Lump sums and minimum benefits under IRC section 417(e)(3) — The mortality table prescribed by the Secretary of the Treasury pursuant to Internal Revenue Code section 417(e)(3)(B) and the adjusted three-segment rates as determined pursuant to Internal Revenue Code section 417(e)(3)(C) and (D) for the fourth calendar month (March) immediately preceding the first day of the plan year in which distribution occurs.

For the 2024 plan year, the segment rates for the second calendar month (May) immediately preceding the first day of the plan year are used to determine the protected minimum lump sum.

Benefits Not Included in the Valuation

This valuation does not include the value of benefits payable to future retirees under the joint and survivor, joint and contingent, single life, certain and life, and certain only optional forms of payment because the incidence of these elections is small relative to the number of participants who elect lump sums.

Benefits payable to non-vested terminated employees were not valued since, under the terms of the plan, these participants are deemed to have received the entire value of their benefits (\$0) upon termination.

Finally, this valuation does not include the value of minimum benefits that may accrue, or be payable, if the plan becomes top-heavy under IRC section 416.
