Asset return	<p>6.50% for the current plan year.</p> <p>The asset return is developed as a weighted average rate based on the target asset allocation of the plan and the long-term capital market assumptions. The calculated return is on an arithmetic mean basis. For details, see the Long-Term Capital Market Assumptions link.</p>
Expected expense	<p>The expected expense included in target normal cost is an estimate based on prior year expenses paid from plan assets.</p> <p>This is the best estimate available of upcoming year's expenses.</p>
Retirement	<p>Active and inactive participants are assumed to retire at normal retirement age as defined in Plan provisions.</p> <p>We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary. As we gain plan experience, we will monitor and make appropriate adjustments in the future. This assumption is reasonable with the plan's design.</p>
Upcoming year salary increase	<p>The preceding year's salary is increased by 4.50% at each age.</p> <p>Note: Not used for Plan accounting calculations.</p> <p>We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the plan sponsor and used by the prior actuary. As we gain plan experience, we will monitor and make appropriate adjustments in the future.</p>
Disability	<p>None.</p> <p>This plan does not offer subsidized disability benefit.</p>
Marriage	<p>100% married; husbands are 3 years older than wives.</p> <p>This assumption does not have material impact on the results of this report and has been selected based on the assumption set by the prior actuary.</p>

Withdrawal	<p>None.</p> <p>We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary. As we gain plan experience, we will monitor and make appropriate adjustments in the future.</p>
Wage base increase	<p>3.50% per year.</p> <p>Our wage base increase assumption are based on inflation and the real wage differential forecast from Social Security Trustee Report. Based on average annual real wage growth forecast from the Social Security Trustee report and historical averages, our best estimate places this assumption to 1.10% above inflation of 2.40%.</p>
Compensation limit increase	<p>2.40% increase per year used in the calculation of the IRC 404 maximum deduction cushion. See Calculated deduction in Rules and regulations. Compensation limit increase is consistent with the inflation assumption.</p>
Form of benefit and basis	<p>100% of active participants are assumed to receive benefits as a single lump sum payable immediately for retirement benefits. The inactive participants will elect a monthly annuity on the normal form at the assumed retirement age.</p> <p>We don't have the plan experience necessary to directly set this assumption; therefore, we are relying on the assumption set by the prior actuary. This assumption is reasonable with the plan's design. As we gain plan experience, we will monitor and make appropriate adjustments in the future.</p>

Methods prescribed by law

Liability measure	<p>Funding target is the present value of the benefits accrued on the valuation date. Target normal cost is based on benefits expected to accrue during the current plan year and includes an estimate of plan expenses for the year.</p>
Lump sum payments	<p>Lump sum payments are valued using the plan's funding target interest rates as required, per IRS guidance.</p>

Methods selected by plan sponsor

Asset method	<p>Market value.</p>
Segment rates	<p>24-month average with no weighting to prior law basis. Use rates where April is the last month included in the average.</p>
PBGC premium basis	<p>Variable rate premiums are calculated using census, market value of assets and the one-month average of corporate bond rates in effect on the valuation date. You elected this standard interest method for the 05/01/2022 plan year, and the method must be used for five years before a change can be made.</p>

Segment 1 years 0-5	Segment 2 years 5-20	Segment 3 years 20+
5.24%	5.48%	5.61%

Methods elected by actuary

Retirees	Assets and liabilities for current and future retirees are included.
Vested benefits	<p>A benefit is included in vested benefits if it meets the requirements under PBGC. The benefit is multiplied by the participant's vesting percentage applicable to each benefit on the valuation date.</p> <p>The following ancillary benefits are always treated as nonvested: disability benefits payable to retirement age unless in pay status, pre-retirement death benefits in excess of the survivor annuity death benefit and post-retirement death benefits for non-retired participants except as noted in the Plan provisions.</p>

Assumptions and methods elected by actuary - plan accounting (ASC 960)

With the exceptions below, all assumptions and methods are the same as those used in determining your plan's regular funding target and target normal cost.

Mortality	Based on Pri-2012 blue-collar base rate mortality table projected generationally using MP-2021.
Mortality base rates	<p>Before benefit payment period Employee amount-weighted, male and female</p> <p>During benefit payment period Retiree amount-weighted, male and female</p> <p>The Society of Actuaries (SOA) is an actuarial organization that periodically reviews mortality data and publishes mortality tables and improvement scales. In October 2019, the SOA released the Pri-2012 Mortality Tables for private-sector retirement plans in the U.S. The Pri-2012 report contains different sets of mortality tables based on complete dataset or various subsets. The blue-collar base rate table was selected based on information provided by the plan sponsor.</p> <p>Pri-2012 section 12.4. provided three approaches for designated beneficiaries in the calculation of joint-and-survivor annuities. We believe "Approach 3" is reasonable for this plan.</p>
Mortality improvement	<p>MP-2021 is the most recent improvement scale published by the SOA in October 2021.</p> <p>In selecting this assumption, we considered the other parameters available in the MIM-2021-v4 application tool issued by the SOA in October 2023 and consider the selections in MP-2021 reasonable. Based on the sponsor's input, plan experience does not show a need for long-term excess death or COVID death load adjustments.</p>
Interest rate used to value liabilities	<p>6.00%</p> <p>The interest rate used to value ASC 960 liabilities is developed as long-term expected geometric return on plan assets. Arithmetic expected return is calculated as the weighted average of broad asset classes' arithmetic returns of the plan's target asset allocation and then converted to the geometric under lognormal distribution assumption. For details, see Long-Term Capital Market Assumptions link.</p>

Treatment of administrative expenses

No adjustments are made for administrative expenses, either through a reduction in the discount rate or by calculating a present value of future expenses.

Plan sponsors may change their administrative expense handling at any time. Our approach provides consistent handling of ASC 960 liabilities from year to year, whether expenses are paid with plan assets or directly by the employer.

Note – expenses paid with plan assets are required to be included in funding normal cost. As a result, the plan is reimbursed annually through required funding. Exception – contributions are not required due to assets sufficiently in excess of liabilities to fund both expenses and normal cost. In this case, administrative expenses are taken from the excess assets.

Basis for lump sums

Interest rate

Based on the three segment yield curve: 3.55%, 3.95% and 4.95%

The plan document defines the lump sum interest rate based on IRC §417(e) rates which closely tie to the high-quality corporate bond yields. According to our most recent study, the long-term expected yields for short, intermediate and long corporate bonds are 3.55%, 3.95% and 4.95%. For details, see Corporate AA yield in Table 3 of Long-Term Capital Market Assumptions link.

Mortality

IRS Prescribed lump sum mortality for 2024. Future years are projected to decrement date with SOA mortality improvement scale MP-2021 as adjusted by the IRS Document Number 2023-23267.

This assumption reflects current law as provided by the IRS.

Statement by Enrolled Actuary
 To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

Schedule SB, Line 22 - Description Of Weighted Average Retirement Age
 Del-Co Water Company, Inc. Pension Plan Trust
 EIN 31-0749383 Plan No. 001

Active participants are expected to retire at the plan's assumed retirement age. The retirement rate reflects only those participants who meet retirement eligibility. An active participant working past assumed retirement age is expected to retire at current age.

This report reflects the maximum benefit limits under Internal Revenue Code (IRC) Section 415 and maximum compensation limits under IRC Section 401 in effect on the first day of each plan year.

The following is a summary of plan provisions and does not alter the intent or meanings of the provisions contained in the contract or plan document. This report reflects the provisions of the restated plan signed 06/19/2024.

Plan eligibility

Age	Attained age 20 ½.
Service	Six months of service. Employees are considered eligible on the 1 st of May following completion of the above requirements.

Normal retirement benefit

Age	Attained age 65.
Form	Monthly annuity payable for life (optional forms may be elected in advance of retirement).
Amount (accrued benefit)	The sum of (a) and (b) as follows: (a) 42% of average monthly compensation, multiplied by the accrued benefit adjustment, multiplied by the short service adjustment (not to exceed 20 years) (b) 23.33% of average monthly compensation in excess of the integration level, multiplied by the accrued benefit adjustment, multiplied by the short service adjustment (not to exceed 35 years) For participants who have attained their 50 th birthday prior to May 1, 2002, the benefit shall be computed without the reduction for less than 20 years of vesting service.

Early retirement benefit

Age	Attained age 55.
Form	Same as normal retirement benefit.
Amount	Accrued benefit on early retirement date reduced by 6 2/3% for each year up to five and 3 1/3% for each year between five and ten that the early retirement date precedes normal retirement date. Accrued benefit on early retirement date unreduced for participants that attain age 60 with 30 years of service.

Late retirement benefit

Age	No maximum age.
Form	Same as normal retirement benefit.
Amount	Greater of accrued benefit on late retirement date or accrued benefit on normal retirement date actuarially increased to late retirement date.

Termination benefit

Vesting percentage	100% after five years of vesting service.
Form	Same as normal retirement benefit with income deferred until normal retirement date. A participant may elect to receive a single sum payable any time after a severance of employment equal to the present value of the deferred monthly retirement benefit payable beginning at normal retirement date under the normal form.

Survivor annuity death benefit (a vested benefit)

Eligibility	Qualified married participant fully or partially vested in an accrued benefit.
Form	Monthly annuity payable to spouse, deferred to participant's earliest retirement date if later than the date of death.
Amount	If death occurs, the amount paid to the surviving spouse is equal to the amount that would have been paid had the participant terminated employment on the date of death and survived to his/her earliest retirement age, retired with a qualified joint and 50% survivor annuity in effect, then died the next day.

Definitions

Accrued benefit adjustment	The quotient of the member's accrual service as of a given date divided by the member's potential accrual service as of the date normal retirement age is reached. The accrued benefit adjustment cannot be greater than 1.00.
Short service adjustment	The quotient of the member's potential vesting service as of the date normal retirement age is reached divided by the maximum amount of years mentioned in accrued benefit definition. The accrued benefit adjustment cannot be greater than 1.00.
Average compensation	The average of an employee's monthly compensation for the five consecutive years out of ten latest compensation years prior to retirement date which gives the highest average.
Accrual service	An employee's period of service. This period of service shall count a partial month as a complete month and shall be expressed as years and fractional parts of a year.
Covered compensation	The monthly average of the social security taxable wage bases in effect under section 230 of the Social Security Act for each year in the 35-year period ending with the year in which the employee attains social security retirement age.

Integration level 1/12th of covered compensation for the plan year.

Optional forms of benefit payments

The optional forms of benefit payments are:

- Monthly annuity payable for life, or 5, 10, 15 or 20 years certain and life.
- Monthly annuity payable as a survivorship life annuity with survivorship percentages of 50, 66 2/3, 75 or 100.
- Monthly annuity payable as a survivorship life annuity with survivorship percentages of 100 with 10 years guaranteed.
- Single sum payment equal to the present value of the retirement benefit.

The optional form conversion basis is 7.50% interest and the UP-1984 Annuity Mortality (post-retirement only) for payments other than lump sums.

Lump sum provisions

Small amount force out (SAFO) – allowed up to \$7,000.

Lump sums in excess of SAFO – are allowed at termination of employment and retirement.

Conversion – deferred rate based on the applicable interest rate and applicable mortality table (pre and post-retirement) as set forth in Code Section 417. The applicable interest rate uses the first calendar month preceding the first day of the stability period which is the plan year.

Changes in principal eligibility or benefit provisions

There have been no changes in principal eligibility or benefit provisions since the last valuation.

Significant event

The enrolled actuary has not been made aware that any significant events have occurred during the year.
