## ACTUARIAL ASSUMPTIONS AND METHODS

The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

### Funding Target Liability

**Valuation Date:** June 1, 2024

**Demographic Information:** The demographic information was provided as of June 1, 2024 by Skidmore College. Although we did not audit the data, we did review the data for reasonableness.

**Actuarial Cost Method:** As required by PPA, the Traditional Unit Credit Cost Method was used.

**Asset Valuation Method:** Market Value of Assets as provided by the trustee.

**Anticipated Rate of Return on Plan Assets:** 2.00%, based on a review of the Plan's asset allocation, investment policy (as shown in the annual funding notice), and expected returns using recent capital market assumptions published by leading financial organizations.

**Actuarial Valuation Software:** For purposes of developing the projected future benefit payments as well as determining attributed liabilities and normal costs as of the valuation date, we utilized the ProVal software platform developed by Winklevoss Technologies. We believe this externally developed valuation system is appropriate, was used for its intended purpose, and did not produce unreasonable results.

**Interest Rates:** The June 2024 funding segment rates were utilized as prescribed by IRC Section 430(h) and elected by Skidmore College. Below, please find the segment rates after reflection of the segment rate stabilization provisions of IRC Section 430(h)(2)(C)(iv).

Segment	Interest Rate
Segment 1	4.93%
Segment 2	5.27%
Segment 3	5.59%

Effective Interest Rate
5.16%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

## ACTUARIAL ASSUMPTIONS AND METHODS

Below, please find the segment rates without reflection of the segment rate stabilization provisions of IRC Section 430(h)(2)(C)(iv). These rates were utilized to determine the low-default risk obligation measurement ("LDRM") of the accrued benefits as of the Valuation Date.

Segment	Interest Rate
Segment 1	4.93%
Segment 2	5.27%
Segment 3	5.26%

Effective Interest Rate
5.15%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

**Rate of Compensation Increase:** Salary increases were not assumed.

### **Mortality for Healthy Lives:**

*Base mortality table:* The blended sex distinct Amount-Weighted Pri-2012 mortality tables for employees and healthy annuitants.

*Mortality improvements:* The base mortality table is adjusted by projecting mortality improvements using the IRS 2024 Adjusted Scale MP-2021 from the year 2012 through 2024, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

## ACTUARIAL ASSUMPTIONS AND METHODS

**Retirement Incidence:** Rates of retirement were determined based on experience from the December 2014 experience study using valuation data from June 1, 2004 through June 1, 2014. Future experience is not expected to deviate significantly from these results. The assumed probability of retirement for active employees eligible to retire at each age, with completion of twelve years of service, is as follows:

Age	Probability
<55	0%
55	0%
56	7%
57	4%
58	4%
59	7%
60	7%
61	10%

64	15%
65	8%
66	8%
67	8%
68	15%
69	30%
70	15%
71	15%
72	15%
73	30%
74	30%
75+	100%

**Turnover:** None assumed, based on the small size of the active employees and length of service with the College.

**Annuity/Lump Sum Conversion Assumptions:** The current applicable mortality table under IRC Section 417(e)(3) that would apply to a distribution with an annuity starting date occurring on the Valuation Date and the underlying valuation interest rates under IRC Section 430(h)(2).

**Actuarial Equivalence:** The UP-1984 male table set forward 1 year and an interest rate of 2.50% based on the definition of Actuarial Equivalent in the Plan Document. The 2.50% interest rate is the interest rate that would be used on the Valuation Date by the PBGC for the purpose of determining the present value of a lump sum distribution on plan termination.

**Disability:** Rates of disability were not assumed in the valuation.

## ACTUARIAL ASSUMPTIONS AND METHODS

**Administrative Expenses:** Actual plan expenses, not including investment advisory fees, paid out of the trust during the previous plan year rounded to the nearest thousand.

**Spouse Assumptions:** 100% of participants not currently collecting benefits are assumed to be married, with male spouses assumed to be three years older and female spouses assumed to be three years younger than the participant. This assumption was based on the provisions of the plan and the College's expectation.

**Form of Benefit:** 100% of future retirees are assumed to elect a lump sum distribution at retirement. This assumption is based on the provisions of the Plan and the College's expectation.

**Statement by Enrolled Actuary**

To the best of my knowledge, the information supplied in this schedule and accompanying schedules, statements and attachments, if any, is complete and accurate. Each prescribed assumption was applied in accordance with applicable law and regulations. In my opinion, each other assumption is reasonable (taking into account the experience of the plan and reasonable expectations) and such other assumptions, in combination, offer my best estimate of anticipated experience under the plan.

This summary is intended as an outline of plan provisions and does not alter the intent or meaning of the provisions contained in the plan document.

**Plan Sponsor:** Skidmore College  
**EIN/PN:** 14-1338562/001

### **Effective Date**

Effective January 1, 1991.

### **Eligibility for Participation**

Employees became eligible to participate on the Effective Date provided they were employed prior to November 15, 1990.

### **Average Monthly Compensation**

Monthly compensation of a Participant averaged over the twelve month period beginning July 1, 1990 through June 30, 1991.

### **Normal Retirement Date**

Each Participant is eligible to retire on his Normal Retirement Date, which is the first day of the month coincident with or next following the attainment of age 65.

### **Normal Retirement Benefit**

A Participant's annual accrued normal retirement benefit is equal to the actuarial equivalent of his present value of accrued benefit.

The present value of accrued benefit is equal to the product of (a) and (b), where

- (a) is 25% of a Participant's average monthly compensation, and
- (b) is a fraction, not to exceed 1, the numerator being the Participant's years of service at November 15, 1990 and the denominator equal to 12.

### **Early Retirement Date**

A Participant may retire on the first day of the month following the attainment of age 55 and twelve years of service.

**Early Retirement Benefit**

If a Participant retires after age 55 and completion of twelve years of service, he may receive immediate payment of his present value of accrued benefit. In addition, he shall receive a supplemental lump sum payment equal to a percentage of his average monthly compensation, as outlined below.

Age	Percentage	Age	Percentage
55	175%	61	85%
56	135%	62	75%
57	125%	63	25%
58	115%	64	0%
59	105%	65	0%
60	95%		

The above percentages shall be multiplied by a fraction, not to exceed 1, the numerator being the Participant's years of service at November 15, 1990 and the denominator equal to 12.

**Termination of Employment**

A member who terminates prior to completion of five years of service is not entitled to any benefit under the Plan. A member who terminates after completion of five years of service is fully vested in his accrued Normal Retirement Benefit.

**Payment of Benefits**

Normally, the pension is payable monthly for the life of the member. A single life annuity is the normal form for unmarried participants. An actuarially equivalent Joint and 50 percent Survivor Annuity is the normal form for married participants. Benefits may also be paid as a lump sum or in the form of a 10 year certain only annuity.

**Death Benefits**

If a member dies prior to retirement and after completion of five years of service, a benefit will be payable to the member's spouse or designated beneficiary. Such benefit shall be determined assuming the member had terminated employment the day before he died, survived to the earlier of Normal or Early Retirement Date, and then elected to receive benefits under an actuarially equivalent Joint and 50 percent Survivor Annuity.

**Supplemental Retirement Plan**  
**Schedule SB, Line 24 – Change in Actuarial Assumptions**  
**EIN/PN: 14-1338562/001**

The Actuarial Equivalence interest rate was updated to 2.50% as of the Valuation Date based on the definition of Actuarial Equivalent in the Plan Document. The 2.50% interest rate is the interest rate that would be used on the Valuation Date by the PBGC for the purpose of determining the present value of a lump sum distribution on plan termination. The change in Actuarial Equivalence interest rate resulted in an increase in liabilities.
