ASOP 56 - Model Disclosure

Benassist Retirement Consulting uses a proprietary actuarial valuation system to perform actuarial valuations of defined benefit and OPEB plans. The system processes census data, calculates benefit amounts and develops associated actuarial liabilities. The system has the flexibility to accommodate various populations, plan designs, demographic, economic and benefit related assumptions. Actuarial liabilities are calculated using standard actuarial techniques. The actuarial liabilities generated by the system rely on the assumptions selected and entered by the user. The system does not evaluate any assumptions for reasonableness, consistency or probability of occurrence. The system is designed specifically for these purposes, and we know of no material limitations that would prevent the system from being suitable for these intended purposes. The actuary signing this report has performed a limited review of results to ensure that the system has been set up appropriately and the plan provisions have been coded correctly.

Certain demographic tables described above are standard published tables.
