SUMMARY OF ASSUMPTIONS

Funding Discount Rates IRS-Prescribed Three-Segment Rates, for the second month prior to the valuation date (May).

	Non-Stabilized	Limited to 25- Year Corridor
Segment 1:	4.84%	4.84%
Segment 2:	5.24%	5.24%
Segment 3:	5.22%	5.59%

The "Limited to 25 Year Corridor" rates are adjusted by the applicable maximum and applicable minimum percentages of the 25-year average segment rates, as set forth in the American Rescue Plan Act of 2021 for use in Minimum Required Contribution calculations. The IRS Maximum Deductible Limit Calculations use the rates from the "Non-Stabilized" column above.

Effective Interest Rate The Effective Interest Rate (EIR) for the current Plan Year is 5.33%. For the prior Plan Year, the EIR was 5.24%.

The EIR is the single rate of interest which, if used to determine the Funding Target, would result in the same Funding Target determined using the Plan Sponsor's above-elected discount rates. The EIR is used to discount contributions for minimum funding requirements and to accumulate excess contributions to the end of the year.

Funding Expected Return on Assets Not applicable for funding calculation purposes. A smoothing method is not used to calculate the Actuarial Value of Assets; therefore, the Expected Return on Assets is not used.

Funding Administrative Expenses Administrative expenses of \$220,000 were estimated to be paid from the trust in the current Plan Year and were included in the Normal Cost.

Expenses paid from the plan trust are estimated by reviewing historical fees paid from the trust and adjusting for PBGC premiums and other expenditures expected to be paid in this Plan Year.

Funding Mortality IRS 2024 Generational Mortality Table

Disability Mortality is assumed to be the same as that used for Healthy Retirees.

Withdrawal Rates

Participants are assumed to terminate employment for reasons other than death, disability, or retirement in accordance with the following, with annual rates varying by age and sex:

Changes in funding assumptions since the prior valuation

In accordance with federal law, the discount rates for funding and PBGC purposes were updated from the discount rates disclosed in the 2023 Actuarial Valuation Report to the discount rates shown above.

The funding mortality table was updated from the IRS 2023 Static Mortality Table to the IRS 2024 Generational Mortality Table.

SUMMARY OF METHODS

Funding Cost Method

The Pension Protection Act (PPA) requires the calculation of the Target Liability and Target Normal Cost. The Target Liability represents the present value of benefits accumulated as of the valuation date. The present value is calculated by projecting future payments of the accrued benefit, adjusting for probability of receipt according to demographic assumptions, and discounting the payments back to the valuation date using the segment interest rates. Payments expected within five years of the valuation date are discounted using the first segment rate, payments expected at least five but within 20 years of the valuation date are discounted using the second segment rate, and payments expected at least 20 years from the valuation date are discounted using the third segment rate. The calculation of the Target Normal Cost is identical, except that the future payment stream is based on the benefit expected to accrue during the plan year.

Asset Method

We used financial data submitted by the trustee as of the valuation date without further audit. This information was not verified by the Plan's actuary. We have reviewed the information for internal consistency, and we have no reason to doubt its substantial accuracy.

Funding Actuarial Value of Assets Method

Actuarial Value of Assets is equal to the Market Value of Assets.

Changes in methods since the prior valuation

None.
